The prospect of a bountiful harvest throughout the loyal States is a matter of first rate importance, considering the political condition of the country, and must tend, greatly, to inspire confidence, and relieve apprehension as to the future. The greater portion of the *wheat* crop is already gathered, and will probably prove a larger yield than any previous one. Coming immediately upon two good harvests, the surplus for export will largely exceed that of any former year. The other important crops look equally well, but being hardier, and far less liable to accident and to injury from vicissitudes of weather, they seldom fail to be abundant, taking the whole country together.

The great interest of the nation, agriculture, the products of which form the basis of our foreign as well as domestic commerce, has been singularly prosperous for three consecutive years. Other interests must share in its good fortune. This is shown by the fact that the whole population of the country is actively employed. With constant employment at good wages; with cheap and abundant supplies of food, the material condition of a people can hardly be improved.

We call attention to this phenomenon of parties who affect to credit nothing of the kind. The fact, however, cannot be controverted. Our people bear the burdens of the war without inconvenience, because they have an abundance of everything that supports war—men, money, food, clothing and munitions of all kinds. All these can be had in the greatest profusion upon such terms as the government offer. A similar strength, stability and confidence displays itself in all the operations of society. Prices of property of all kinds are well maintained. There is no check to the progress of all useful enterprises that bid fair to be remunerative. Society everywhere wears a cheerful aspect, and the hum of industry has not ceased to be heard in any part of the land.

The grand secret of our national strength has been the ample provision made for just such an event as the rebellion, which closed one-half of the ports of the country, and cut off one-third of our population from all intercourse with the other two-thirds. Such a state of things did not, fortunately, seriously interfere with the prosperity of the people loyal to the Union. By singular coincidence the enlargement of the Erie Canal was completed the same year in which the rebellion broke out. At the same moment, almost, the great lines of railroad which serve as outlets from the interior, had put themselves in a condition to meet the enormous demands now made upon them. With the closing of the Mississippi, consequently, no inconvenience was really caused, as the artificial outlets from the interior were entirely adequate to the transportation of all its products, by much more expeditious, convenient, and what must in time prove, cheaper routes. The enterprise of our people had, when the South, imagining it held the natural channels of communication into the interior, sought to break up the Union, provided others so well adapted to the wants of commerce and trade, as to render it certain that they will hereafter take the preference, should the free navigation of all our rivers be fully restored. The Mississippi has lost its former value, and the importance and advantage it secured to the South will, hereafter and forever, be transferred to the North.

The actual exhibition of our strength has been fully in keeping with what we have assumed in reference to its basis. One great feature of it is the independence of our people of all other nations. We need be indebted to but few for any of the necessaries of life. We have imported such to very great extent, because we could not do everything at once, not because we had not the means and elements of producing then at home. High prices will instantly direct attention to the domestic manufacture of nearly everything appropriate to our soil and climate that we have been accustomed to import—such as iron, and the textile fabrics of all kinds except silks, and which must in the outset, be greatly raised in prices, and finally excluded by the joint operation of a high tariff, and manufactures stimulated by the low price of money at home. We are thus every day becoming less and less dependant upon others, without releasing them in any considerable degree from their dependence upon us. The first cry of the Western European nations is for cheap *food*. They are not likely to increase the cost of an indispensable article by impost duties, especially by differential duties against the United States. We have now the advantage over any other food producing nation, and this advantage is steadily becoming the more decided from the extension and improvement of our public works. No other grain producing country is rivalling, or hardly imitating us in this respect. The Great Eastern could regularly, and at all times of the year, obtain a full cargo at no other port in the world but New York. Here a full load is always in readiness for her, on board canal boats in the summer, and in our warehouses in the winter, which are kept constantly filled by the great lines of railroad terminations upon our harbor. Everything consequently tends to reduce the cost of transportation between the producer in this country and the consumer abroad, while such cost from other districts of production must remain, for a long time to come, very nearly stationary.

Of all this, the position, since the war broke out, of the commerce between the United States and other nations, is full proof. We have been able to keep foreign exchange largely in our favor, except when another element has been thrown in—the return of enormous amounts of securities formerly held abroad. The forced realization of these has compelled us to part with some specie; otherwise we should have constantly imported it. It is now the opinion of the best informed merchants in this city that the current must change, and specie flow to us from abroad before the close of the year. It certainly must, but for the disturbing cause stated. This cause will before long expend itself, and when such is the case, we cannot see how other nations can be in any other relation to us than debtors. We are daily becoming more and more self supporting, and they daily less so from the rapid increase of population upon a circumscribed area. Our strength is a natural one, but still no less calculated to excite surprise and admiration; and those who are most disposed to abuse and carp at us, could much better spend their time in inquiring into the real secret of our power, which every day is becoming more and more consolidated and formidable, because it rests upon natural advantages which are steadily becoming more decided in our favor.—*Hallett's Financial Circular.*

AMERICAN RAILROAD BOND LIST.

American Railroad Journal.

Saturday, August 2, 1862.

Our City Passenger Railroads.

We give below a statement of the length, cost, indebtedness, earnings, etc., of the passenger railroads of this city and Brooklyn, compiled from the reports of the several companies made to the Legislature for the fiscal year ending September 30, 1861.

The city lines in operation are seven in number, comprising the Brooklyn City, the Broadway of Brooklyn, and the Second, Third, Sixth, Eighth and Ninth Avenue roads in this city. The statistics of these works furnish some interesting and instructive matter.

The whole length of these roads is 76.7 miles; but including double track and sidings, it is 140.5 miles. The number of cars is not given on the 2nd Avenue road; on the other lines they number 529, of both kinds. Those on the 2nd Avenue will probably bring this up to 625.

The total cost of these roads is returned at $5,838,489, exclusive of horses and cars, or $6,642,833 with these, giving an average cost of $47,280 per mile of single track. The weight of rail used varies from 56 to 95 pounds per yard, and will probably average 80 pounds.

The entire obligations of the seven companies amount to $6,498,440, of which $5,365,360 consists of stock subscriptions actually paid in. The debts, therefore, as compared with capital, average only about twenty-one per cent. This presents a very marked difference from the relative magnitudes of the two classes of obligations on most of our railroads.

The number of miles traveled on six of these horse roads was 9,950,088, to which should be added probably 1,000,000, the estimated mileage on the 2nd Avenue. This would make an aggregate of nearly eleven millions in all. The total number of passengers carried amounted to 44,167,460, showing that each car carried about four persons on the average, or that the gross earnings were about 20 cents per mile traveled. The 3rd Avenue passengers per mile averaged 5.91; the 8th, 3.86; the 6th, 3.75; the 9th, 2.13; the Broadway of Brooklyn, 2.31, and the Brooklyn City, 3.67 per mile traveled.

The gross earnings of these roads amounted to $2,202,110, or $28,710 per mile. Of the gross receipts three-fourths were disbursed for working expenses, which included the purchase of horses and mules to replace those that had been used up in the service. The net earnings were $547,484, or $7,138 per mile.

The 3d, 6th and 8th Avenue roads declared dividends of 12 per cent. each, the 2nd Avenue 6; the Brooklyn City, 8, and the Broadway of Brooklyn, 3½ per cent. during the year. The 9th Avenue has not yet commenced the distribution of dividends.

	Brooklyn City	Broadway R. R. of Brooklyn	Eighth Avenue	Ninth Avenue	Second Avenue	Sixth Avenue	Third Avenue	
76.7	28.3	5.4	10.0	18.0	8.0	4.0	8.0	Length of Main Line.

$547,484	$123,021	12,265	115,466	19,874	87,780	53,186	186,942	Net Earnings.
	8	12	12		6	12	12	Dividends, per cent.
								8½

The earnings, expenses, &c., of the 4th Avenue road being included in those of the Harlem, we have not been able to give them in the table. The report shows that the number of city cars on that line is 36; the number of miles run by them, 555,-120; and the number of passengers carried, 3,-607,889. Taking all the roads in the two cities it will thus be found that they are equipped with about 650 cars, which travelled 11,500,000 miles, and carried 47,775,349 passengers. The ratio of passengers to mileage on the 4th Avenue was 6.5 —the highest of all our city roads.

Another Railroad Dispute in New Jersey.

Our readers are aware that a railroad is in progress, designed to traverse the State of New Jersey from Port Monmouth, on the lower bay, Southward to the Delaware, intersecting the Camden and Atlantic Railroad, by which a new route will be opened between this city and Philadelphia. It is given out that the rate of fare for through passengers will be about one dollar lower than by the Camden and Amboy lines; but as the distance will be twenty miles greater, and a good part of it must be made by water, it has hardly seemed probable that it would divert business largely from the direct route. The joint companies, however, think differently, and have applied to the State Chancellor for an injunction against the further prosecution of the work. On Tuesday last the arguments between the two companies commenced at Trenton; Messrs. J. P. Bradley and John P. Stockton being for the Camden and Amboy, and Messrs. B. Williamson and A. O. Zabriskee for the Raritan and Delaware Bay Company. The decision will be looked forward to with a good deal of interest by the traveling public.

Pennsylvania Railroad.

In the report of the Pennsylvania Railroad Company for the year 1861, a copy of which has just been received, we find much of general interest in regard to the operations of the road. While the increase of business over 1860 was $1,350,535, that of expenses was only $16,763. The increased distance run by engines was 779,594 miles; but though the cost of fuel amounted to $36,811 more than in 1860, it shows a decrease of 76 cents for every hundred miles run. A similar fact is noticeable in the outlays for engine repairs, which included the purchase of six new locomotives to take the place of old and worn out engines inferior in all respects to the present.

During the year the State tax upon tonnage was removed, as were also the tolls upon the Harrisburg and Lancaster Railroad, which has passed into the company's possession under a lease of 999 years. These served to reduce largely the transportation expenses. On the other hand, the much greater volume of merchandise carried, and the number of trains run have required a larger outlay than usual for the maintenance of way, especially on the newly leased line. The sum of $28,797 additional was paid on watchman's account, to ensure the safety of the track and bridges, at a time when the government was first put in peril.

The additions made to equipment during the year, exclusive of the engines spoken of above, comprised 14 first class freight locomotives, 2 tank engines for the Delaware extension, 2 small machines for passenger trains on branch roads, and 460 eight-wheeled cars of various kinds, besides 550 cars hired, but owned by other companies. A large number of new engines and cars have since then been built for the Pennsylvania road. At the Altoona shops 884 feet lineal of iron truss bridges were constructed, during the year.

The troubles in Virginia stimulated the coal trade from the Broad Top region, and necessitated the large additions made to the rolling stock. The great number of trains passing and repassing renders the construction of a second track a measure of vital importance as early as possible. Only three miles and one-fifth of this were laid during the past year; but preparations were made to do more in 1862. The destruction by fire of the large freight station at Pittsburg compelled the erection of a new one, 664 by 110 feet, at a cost of $25,250. Attention is called to the excellent accommodations now enjoyed at that place and the new shops at Harrisburg.

The report of the Master of Machinery shows that the company's motive power consisted of 229 engines, of which 194 were in running order at the date of the report. Three were hired by the Pittsburg, Columbus and Cincinnati Railroad Co. The number of miles run by passenger trains was 1,-118,137; by freight trains, 3,148,694; by distributing trains, 146,205: making a total of 4,413,-036. Of the passenger engines one made 42,132 miles during the year; another, 38,532, and a third, 37,584 miles. The first of these was between Altoona and Pittsburg. The greatest distance made by a freight train was 36,391 miles, between Harrisburg and Altoona. The average mileage made with passenger trains was 23,790, and with freight trains, 19,307 miles. The mileage made by the engines of passenger trains shows an increase of 932, and of freight, of 999 miles per engine over 1860.

The average cost per 100 miles run for repairs of engines was $7.81, against $8.85 in 1860. The cost of fuel per 100 miles run was $6.41, against $7.17 the year before and $8.19 in 1858. The hope is expressed that a still greater saving per mile may be reached in this account. One large item in the cost of repairing locomotives has been the putting of new copper fire-boxes into them, iron having been found not to be economical.

The report of the Car Department shows that 238 cars have been rebuilt, 100 new ones added and 99 repaired, during the year. Some of the passenger cars have been put to severe usage in carrying large bodies of troops. The lighting by gas is found to work well, and fixtures have been placed in all passenger cars rebuilt; the ventilation is also improved. The following table shows the total number of cars belonging to the company:—

Eight-wheeled passenger cars	84
Emigrant do. do.	29
Baggage and express do.	44
House cars, all kinds	1,499
Stock cars, eight-wheeled	400
Gondolas (for coal, wood and lumber)	837
Other kinds (4 wheeled)	558
Total	3,451

Besides these, the company own a large number running on the Pittsburg, Fort Wayne and Chicago and the Pittsburg, Columbus and Cincinnati roads, making altogether 3,192 eight-wheeled and 578 four-wheeled cars.

The Chief Engineer in his report alludes to the heavy expense incurred in making renewals of the superstructure, caused by the heavy business of the road. Generally speaking the condition of the track has been improved; but the construction of a second is indispensable. Wrought iron chairs appear to be exclusively used. A rail of a new pattern has been laid on part of the road within the corporate limits of Philadelphia. Extensive repairs have been made on the East Brandywine and Waynesboro' road, now operated under lease by this company; also on the Harrisburg and Lancaster line. Numerous iron bridges have also been put up on the Middle Division, all having been provided for a double track.

On the Delaware Extension, work was resumed early in April at the Schuylkill bridge, which was finished in December. It consists of three spans of 192 feet each, the whole being of iron resting on stone piers. A temporary trestle-work connects the West end of this bridge with the West Chester and Philadelphia Railroad. Sidings have also been laid down to connect the Pennsylvania with the proposed Junction road along the West bank of the Schuylkill down to the Philadelphia, Wilmington and Baltimore.

The total receipts of the Canal Department amounted to $176,109 04, of which $28,236 45 were net profits. The former were $33,256 77 less than in 1860, the falling off being due solely to the war.

The annexed tabular statement shows the whole expenses on the Canal in detail; also the earnings, profit and loss, from August 1st, 1857, to December 31st, 1861:

	Total Expenses.	Total Receipts.
* Earnings and expenses on all divisions in 1857, from August 1	$78,190 10	$92,433 50
Eastern Division	309,306 05	588,886 04
Lower Juniata Division	132,608 69	89,349 71
Upper " "	44,225 39	13,929 00
" Western "	16,826 93	6,035 58
Lower " "	98,795 76	48,438 23
Incidentals	381 10	15,485 77
	$675,334 02	$854,557 83
Total expenses	675,334 02	
Net profit		$179,223 81

* The earnings and expenses of the canal were not kept by divisions in 1857, but accounted for in the aggregate, as appears in the above table.

We published the President's report at the time of its appearance in January. Annexed is a copy of the company's

GENERAL ACCOUNT.

Capital stock	$13,264,100 00
Bond Account, viz:	
First mortgage six per cent. dollar bonds, payable 1880	4,990,000 00
Second mortgage six per cent. dollar bonds, payable 1875	2,421,000 00
Second mortgage six per cent. sterling bonds, payable 1875	2,126,400 00
Bonds due the State of Pennsylvania, bearing 5 per cent. interest	7,100,000 00
Amount of mortgages and ground rents on real estate	299,363 84
Bills payable	393,500 00
Accounts payable, including pay rolls for December, 1861	630,051 86
Contingent fund	885,640 74
Interest and dividends due to stockholders, unpaid	21,044 00
State tax	65,103 72
Amount due other roads	33,833 75
Balance to credit of profit and loss.	2,004,521 55
	$34,284,558 96

Cost of road, including engineering, land damages, fencing, machine shops, engine houses, station and warehouses, car sheds, water stations, foremen and tool houses, and shop machinery, from Harrisburg to Pittsburg, and station and warehouses on the Philadelphia Division	$17,514,211 72	
Less profits of road, after paying interest to stockholders up to November 1st, 1855, credited to cost of construction, as required by charter	589,185 79	
		$16,925,025 93
By amount paid State of Pennsylvania for Philadelphia and Columbia Railroad $6,500,000		
By amount paid State of Penn. for canals and Portage Railroad 1,000,000		
		7,500,000 00
The above division being made upon their presumed relative value.		
By cost of equipment of road, including locomotives, freight, road and passenger cars		3,447,522 39
By cost of real estate of company.		1,792,071 78
By cost of telegraph line		45,264 28
By extension of Pennsylvania Railroad to Steubenville and Pittsburg Railroad		5,214 09
By extension of Pennsylvania Railroad to Delaware River		272,579 84
By amount of stock of the Pittsburg, Fort Wayne and Chicago Railroad Company		816,050 00
By amount of bonds and stock of municipal and railroad corporations		605,930 60

By balance in hands of agents		453,367 99
By balance in hands of Treasurer, December 31st, 1861		705,974 06
		$34,234,558 96

The Pennsylvania Railroad Terminus.

No one can visit Washington avenue wharf without being struck by the magnitude of the preparations on foot there to accommodate the business of the Pennsylvania railroad. Much attention, of course is attracted by the great grain elevator, a massive structure of brick and iron, perfectly fire proof, which rises like a giant among pigmies, from the midst of the low buildings which characterize that district, crowned by a lofty tower, reaching a height of one hundred and twenty feet. This alone would suffice to typify the importance of the terminus, and the extent of the business it is intended to accommodate.

But the rapidly multiplying railway tracks and cars, the removal of old houses, the erection of sheds, the extension of wharves, all point unerringly to the fact that this great corporation is preparing for an immense future, and will absorb within its grasp the whole property lying near Washington avenue wharf. Even before the close of the present season, the site bids fair to become one of the busiest and most remarkable scenes in Philadelphia. Already the number of trains arriving and departing there daily keeps the whole neigborhood in motion and blocades the streets with cars, because the standing room has not yet been provided on the space between Christian street wharf and Washington avenue wharf.

This location has the advantage of being below the island, so that the piers may be projected into the stream any required distance, and thus all the accommodations in the way of docks, needed for the shipment of produce, may be obtained there. Of these there will, no doubt, be many, covering a front of several acres along the Delaware about the foot of Washington avenue, including the Navy-yard and all the intervening space; so that when the Navy-yard shall be removed to League Island, the railroad terminus will extend from Christian street to Reed street along the river.—*Philadelphia North American.*

Railroad Earnings--Monthly.

The earnings of the Cleveland, Columbus and Cincinnati R. R., for June, 1862, were $122,524 03
Do., 1861 89,028 41

Increase $33,495 62

The earnings of the Cleveland and Pittsburg Railroad for June, 1862, were $123,000
Do., 1861 104,000

Increase $19,000

The earnings of the La Crosse and Milwaukee Railroad for June, 1862, were $112,000
Do., 1861 108,000

Increase $4,000

The following statement shows the business of the Philadelphia and Reading Railroad Company for June, 1862, compared with that of 1861:

	1862.	1861.
Rec'd from coal	$174,221 78	$215,161 20
" " merch'dise	39,216 96	28,823 60
" " travel, etc.	40,846 13	26,066 47
Total	$254,284 87	$270,051 27
Transportation, roadway, dumpage, renewal fund, and all charges	153,559 48	130,825 46
Net profit for the m'th	$100,725 39	$139,225 81
Profit for the previous 6 months	725,846 75	601,055 27
Total net profit 7 mos.	$826,572 14	$740,281 08

Interest and Dividends.

The interest on the bonds of the New Jersey Railroad and Transportation Co., due August 1, will be paid at the Bank of Commerce.

The interest coupons of the second mortgage bonds of the New York and Harlem Railroad Company will be paid at the Treasurer's office.

The interest on the first mortgage bonds of the Cleveland and Pittsburgh Railroad Company, due Aug. 1, will be paid at No. 25 William-st., by H. C. Kingsley.

The interest due August 1, on the first mortgage bonds of the Cleveland and Mahoning Railroad Company, will be paid by Messrs. Ward, Campbell & Co., No. 56 Wall st., New York.

Interest on the bonds of the Pennsylvania Coal Company, due Aug. 1, will be paid at the company's office in New York.

The Erie Railway Company give notice to the holders of the certificates of D. S. Gregory and J. C. B. Davis, Trustees, that on and after the 1st of August, payment will be made at the office of the Treasurer, in Erie-place, of the coupons of the fifth mortgage bonds, represented by said certificates, with interest from May 1, 1861, to August 1, 1862.

The Morris Canal and Banking Company has declared a dividend of 5 per cent. upon the preferred stock, payable Aug. 5.

The authorities of the City of Alleghany, Penn., are now prepared to issue new bonds in exchange for railroad bonds of that city upon the basis of the compromise hitherto offered by them.

Wheat Trade of Chicago and Milwaukee.

The receipts of wheat at Milwaukee and Chicago from January 1, to July 19th, 1861 and 1862, have been as follows:

	1862.	1861.
Milwaukee	7,032,304	5,335,383
Chicago	6,026,650	5,502,870

The shipments of wheat from Milwaukee and Chicago from the opening of navigation to July 19th have been as follows:

	1862.	1861.
Milwaukee	7,549,756	5,654 422
Chicago	8,026,650	5,502,870

Reducing flour to wheat, at five bushels to the barrel, the shipments of wheat from the two cities thus far the present season compare thus:

	Flour, bbls.	Wheat, bus.	Total, bus.
Milwaukee	422,211	7,549,756	9,660,811
Chicago	715,433	6.026,650	9,603,815
Difference in favor of Milwaukee			56,996
Stock on hand July 18th			1.498,548
Estimated stock at Chicago, July 12th			772,889

The Hoosac Tunnel.

The recently appointed Troy and Greenfield Railroad commissioners have decided to send an agent to Europe, to examine critically the railway tunnels in that part of the world. Charles S. Storrow of Boston has been appointed for that purpose, at a compensation of $3,000, with expenses paid, and sails next week. The object of the trip is to obtain the most reliable data from which to determine the character of the tunnel required under the Hoosac mountain, as well as the most economical and speedy method of constructing it, and also the probable cost of the work. There being no tunnels in this country of sufficient magnitude to be of much service in fixing upon the details of the one required, the commissioners deem this course the wisest and safest that can be adopted before proceeding to the completion of the Hoosac bore.

The Portland Company.

The following is an abstract of the condition of the Portland Company on 15th ult.:

Assessments voted by the company and paid	$169,800 00
Amount of capital stock paid in and now existing	235,700 00
Amount due from the company (including extension of notes receivable endorsed by them) about	267,000 00
Buildings, machinery and other fixtures	164,811 46
The last estimated value affixed by the assessors to the lands, buildings, flats, &c	147,800 00
Aggregate value affixed to all the taxable property of the corporation, by the assessors	222,800 00

Massawippi Valley Railway.

We understand that the preliminary survey of the Massawippi Valley Railway has commenced, under the skilful superintendence of Mr. J. M. Clark, late Assistant Engineer of the S. S. and C. R. R. The opposition to the charter for that road, on the part of the Shefford Railway, was withdrawn in consideration that the gauge was narrow instead of being "broad," like the gauge of the Pasumpsic, and further that the Massawippi should become a part of the main line of the Shefford road, and worked on a *pro rata* arrangement therewith from any point at which a junction may be hereafter effected. The effect of this provision will be probably to carry the Shefford road by the

head of Massawippi Lake, and to place the Massawippi Valley under the control of the narrow gauge, instead of its becoming a Grand Trunk branch. It is fortunate that all cause of difference between the two companies has been thus removed, and we trust their successes may be speedy and harmonious.—*Waterloo, Ca., Adv.*

Copper Mines in Lake Superior and Great Britain.

Annexed is a comparative statement of the product of ingot copper from the mines of Cornwall, England, and Lake Superior:

PRODUCT OF THE CORNWALL COPPER MINES.

	Tons.		Tons.
1771	3,448	1822	7,657
1730	4,102	1857	13,644

Total	37,153	16,496,136

Norwich and Worcester Railroad.

The earnings of this road for the six months ending May 31, 1862, were as follows:

Passengers		$47,800 84
Freights		86,308 58
Miscellaneous		7,979 55
Total		$142,088 97
Expenses	$80,359 96	
Interest	19,303 64	
		99,663 60
Net earnings—2 1-10 per cent.		$42,425 37
Debt funded		$524,300 00
Debt floating		31,716 06
Debt for steamboat stock		200,000 00
Total		$756,016 06
Assets		54,955 94
Total		$701,060 12

The steamboat stock pays 10 per cent. pividend

The earnings of June following the above six months show an increase of $12,000.

St. Louis, Alton and Terre Haute Railroad.

In May last, the Terre Haute, Alton and St. Louis Railroad was sold under a decree of the Illinois Courts, for the benefit of the mortgage bondholders. It has since been re-organized as the St. Louis, Alton and Terre Haute Railroad Company, electing the following Board of Directors:

Chas. Butler, Robert Bayard John G. Richardson, S. J. Tilden, Pickering Clark, of New York city; Russel Sage, Troy, N. Y.; W. D. Griswold, Terre Haute, Ia.; Ralph Tousey, St. Louis, Mo.; Anthony Thornton, Shelbyville, Ill.; Hiram Sandford, Paris, Ill.; Levi Davis, Alton, Ill.; Hon. Gustavus Kœrner, Belleville, Ill., and John S. Hayward, of Hillsboro', Ill.

Subsequently, Wm. D. Griswold was elected President and General Superintendent; Ralph Tousey, Secretary and Treasurer, and Jas. B. Ralston appointed Auditor.

Railways in Chile.

In Chile there are 289½ miles of railway open or ready for use, viz:

Caldera and Copiapo	50½ miles.
Copiapo and Pabellon	23½ miles.
Pabellon and Chanarcillo	26 miles.
Valparaiso and Santiago	77 miles.
Santiago and Rengo	72 miles.
Coquimbo Railway	40½ miles.
	289½ miles.

Upon these railways exist features such as are rarely to be met with upon any lines in the world; as, for instance, upon the Valparaso and Santiago Railway is an incline of 1 in 45 for twelve miles in length, combined with curves of 600 ft. radius; the summit level of this line will be 2,650 ft. above the sea; and upon the Chanarcillo line is an incline of 1 in 25, nine miles in length, with curves of 500 ft. radius, up which engines ascend daily to an altitude of 4,400 ft. above the sea, an altitude not previously attained by a locomotive.

The Eighth Census.

We have obtained from the Census office at Washington, the following preliminary chapters of the very valuable report of Jos. C..G. Kennedy, Esq., which will be found of great interest, exhibiting as it does, the rapid growth of this country during the last ten years. We commence with the chapter upon the

PROGRESS OF RAILROADS IN THE UNITED STATES FOR THE DECADE OF 1850–'60.

The decade which terminated in 1860 was particularly distinguished by the progress of railroads in the United States. At its commencement the total extent in operation was 8,588.79 miles, costing $296,260,128; at its close, 30,598,77 miles, costing $1,134,452,909; the increase in mileage having been 22,004,08 miles, and in cost of construction $838,192,781.

While the increase in mileage was nearly 300 per cent., and the amount invested still greater, the consequences that have resulted from these works have been augmented in vastly greater ratio. Up to the commencement of the decade our railroads sustained only an unimportant relation to the internal commerce of the country. Nearly all the lines then in operation were local or isolated works, and neither in extent nor design had begun to be formed into that vast and connected system which, like a web, now covers every portion of our wide domain, enabling each work to contribute to the traffic and value of all, and supplying means of locomotion and a market almost at his own door, for nearly every citizen of the United States.

Previous to the commencement of the last decade only one line of railroad had been completed between tide-water and the great interior basins of the country, the produce of which now perform so important a part in our internal and foreign commerce. Even this line, formed by the several links that now compose the New York Central road, was restricted in the carriage of freight, except on the payment of canal tolls, in addition to other charges for transportation, which restriction amounted to a virtual prohibition. The commerce resulting from our railroads consequently has been, with comparatively slight exceptions, a creation of the last decade.

The line next opened, and connecting the Western system of lakes and rivers with tide-water, was that extending from Boston to Ogdensburgh, composed of distinct links, the last of which was completed during 1850. The third was the New York and Erie which was opened on the 22d of April, 1851. The fourth in geographical order, was the Pennsylvania, which was completed in 1852, although its mountain division was not opened till 1854. Previous to this time its summit was overcome by a series of inclined planes, with stationary engines, constructed by the State. The fifth great line, the Baltimore and Ohio, was opened in 1853, still further South. The Tennessee River, a tributary of the Mississippi, was reached in 1850, by the Western and Atlantic railroad of Georgia, and the Mississippi itself, by the Memphis and Charleston Railroad, in 1859. In the extreme North the Atlantic and St. Lawrence, now known as the Grand Trunk, was completed early in 1853. In 1858, the Virginia system was extended to a connection with the Memphis and Charleston and with the Nashville and Chattanooga railroads.

The eight great works named, connecting the interior with the seaboard, are the trunks or base lines upon which is erected the vast system that now overspreads the whole country. They serve as outlets to the interior for its products, which would have little or no commercial value without improved highways, the cost of transportation over which does not equal one-tenth that over ordinary roads. The works named, assisted by the Erie Canal, now afford ample means for the expeditions and cheap transportation of produce seeking Eastern markets, and could, without being overtaxed, transport the entire surplus products of the interior.

Previous to 1850, by far the greater portion of railroads constructed were in the States bordering the Atlantic, and, as before remarked, were for the most part isolated lines, whose limited traffics were altogether local. Up to the date named, the internal commerce of the country was conducted almost entirely through *water* lines, natural and artificial, and over ordinary highways. The period of the settlement of Califoraia marks really the commencement of the new era in the physical progress of the United States. The vast quantities of gold it produced imparted new life and activity to every portion of the Union, particularly the Western States, the people of which, at the commencement of 1850, were thoroughly aroused as to the value and importance of railroads. Each presented great facilities for the construction of such works, which promised to be almost equally productive. Enterprises were undertaken and speedily executed which have literally converted them into a network of lines, and secured their advantages to almost every farmer and producer.

The progress of these works in the aggregate, year by year, will be seen by the tabular statements at the close of the report. The only important line opened in the West, previous to 1850, was the one from Sandusky to Cincinnati, formed by the Mad River and Little Miami roads. But these pioneer works were rude, unsubstantial structures, compared with the finished works of the present day, and were employed almost wholly in the transportation of passengers. Within the decade in place of this one line, railroads have been constructed, radiating from Lakes Erie and Michigan, striking the Mississippi at *ten* and the Ohio at *eight* different points, and serve as trunk lines between the two great hydrographic systems of the West. These trunk lines are cut every few miles by cross lines, which, in the States east of the Mississippi, are sufficiently numerous

to meet every public and private want, and to afford every needful encouragement to the development of the resources of the country.

The Southern States have been behind the Northern in their public enterprises, though at the date of the census, they were prosecuting them with great energy and vigor. The progress inland of the great trunk lines of the South has been already noted. The opening of the Mobile and Ohio, and the Mississippi Central, which will soon take place, will give completeness to the system of the South-Western States, and leave little to be done to make it all that is wanted for that section of the country.

West of the Mississippi less has been done, for the reason that the settlements there are of a more recent date, and the people less able to provide the means for their construction than those of the older States. But even upon our Western frontier extensive systems have been undertaken, and very considerable progress made in their execution.

A more interesting subject than the progress of our public works would be their results, as shown in the increased commerce and wealth of the country. But such inquiries do not come within the scope of this report. It is well ascertained, however, that our railroads transport in the aggregate at least 850 tons of merchandise per annum to the mile of road in operation. Such a rate would give 26,000,000 tons as the total annual tonnage of railroads for the whole country. If we estimate the value of this tonnage at $150 per ton. the aggregate value of the whole would be $3,900,000,000. Vast as this commerce is, more than three-quarters of it has been created since 1850.

To illustrate the correctness of the estimate made, the following statement is added of the tonnage transported by the railroads of the State of New York for 1860, with the estimated value of the same. The classifications are made by the companies:

Kinds of Freight.	Tons Carried.	Value per Ton.	Total Value.
Products of the forest.	373,424	20	$7,468,480
Products of animals..	895,519	200	179,103,800
Vegetable food.....	1,103,640	50	55,182,000
Other Agricultural products	143,219	15	2,148,055
Manufactures....	511,916	250	127,979,000
Merchandise	783,811	590	391,905,500
Other articles.....	930,244	10	9,302,440
Total.....	4,741,773	$163	$773,089,275

If we make a deduction of one-quarter for duplications—a portion of the tonnage passing over more than one road—the aggregare would be 3,556,330 tons, having a value of $579,681,790.

The railroads of Massachusetts transported, for the same year, 4,694,369 tons, or making the deductions for duplications, 3,070,027 tons, and having a value of $500,524,201. The number of miles of railroad employed in the transportation of freight, being 2,569 in the State of New York, and 1,317 in the State of Massachusetts, with the deductions named, the amount of freight transported in these States averages 1,700 tons per mile. We have estimated the tonnage of all the railroads of the United States to average one-half the amount of the roads in these States. That this is not an over-estimate is shown by the following statement of the tonnage of several interior lines:

Roads.	Miles.	Tons Transported.
Cleveland, Columbus and Cincinnati	141	295,835
Little Miami.....	120	843,961
Cleveland and Toledo.....	147	250,482
Michigan Central	282	378,570
Michigan Southern	525	895,679
Illinois Central....	700	496,390
Chicago, Burlington and Quincy....	310	538,670
Chicago and Rock Island.....	228	801,668
Galena and Chicago.....	259	381,188
Total.... 2,712		3,286,393
Average per mile, 1,250 tons.		

BANKING.

Among the evidences of prosperity and general accumulation of wealth in the United States, the multiplication of banks with increased aggregate capital is one of the most significant. When, as in this country has been generally the case, individual promises representing produce and merchandise, and made available through the instrumentality of banks, are almost the sole means by which commodities pass from the producers to the consumers, the increased action of the banks becomes the index of larger production and more active trade. Where crops and the products of manufacturing industry are more abundant, the aggregate amount of paper created by their interchange is larger, and the negotiations of this paper require greater banking facilities. This want usually manifests itself in a more lucrative banking business, which draws more capital into that employment. Such a state of affairs presented itself during the decade which closed with 1860. The bank movement in the United States during that period underwent great expansion without becoming less sound. In that respect it presented a strong contrast to the expansion that occurred in the decade which ended with 1840. In that period a season of speculation in bank stocks and wild lands manifested itself, and the paper created for bank negotiation represented imaginary or speculative values, rather than commodities produced. Those values were never realized, and the whole paper system based on them collapsed. If we compare the aggregate features of banks at each decade with the population and the sum of the imports and exports for corresponding dates, the results are as follows:—

Years.	No. Banks.	Capital.	Loans.
1830....	330	$145,102,268	200,451,214
1840....	901	358,442,692	462,896,523
1843....	691	228,861,948	254,544,937
1850....	872	227,469,074	412,607,653
1860....	1,562	421,880,095	691,945,580

Years.	Specie.	Circulation.
1830....	22,114,917	$61,323,898
1840....	33,105,155	106,968,572
1843.....	33,505,806	58 563,608
1850....	48,677,138	155,012,911
1860....	83,594,537	207,102,477

Years.	Imp. and Export.	Population.
1830....	144,726,428	12,866,020
1840....	239,227,465	17.069,453
1843....	149.090,279	.....
1850....	330.037,038	23,191,876
1860....	726,288,550	31,445,080

The year 1843 was that of the lowest depression after the extensive liquidation that followed the expansions of 1837–'39. In that year the bank credits were, however, large, and measured by the foreign trade or the sum of the imports and the exports, but an internal trade had been developed through the settlements of the western country which required more credits. The operation of the general bankrupt law aided in clearing away the wreck of over two hundred banks that had failed, and which failures involved that of several sovereign States that had loaned their credits for bank capital.

The elements of prosperity were now again active, and banking facilities were required to a greater extent. The severe losses the public had suffered made some more comprehensive guaratee necessary to a full restoration of confidence in bank paper. In New York, in 1838, a new principle had been adopted—that of requiring the banks to deposit security for their circulating notes and holding stockholders liable to an amount equal to the value of their shares. On this basis the banking of New York was thenceforth to operate; and the principle, as its value became recognized, was gradually adopted in other States.

The failure of the Irish harvests of 1846–'47, followed by those of England in 1848–'49, by creating a great demand for American breadstuffs, stimulated business and gave a new impulse to banking. The year 1850 showed an amount of foreign trade more than double that of 1843. With the increase of business the banks were very prosperous; as is manifest in the fact, that although the capital of the banks was no more in that year than in 1843, their discounts were one hundred and fifty millions, or 60 per cent. greater. Thus the decade opened with a very lucrative banking business, and amid the greatest excitement in relation to the gold discoveries of California. The spirit of enterprise abroad was very strong, and the impression that prices were to rise by reason of the depreciation of gold was prevalent; hence the general desire to operate, in order to avail of the anticipated profits. Industry of all descriptions was very active and productive, and there never was a period when the national capital accumulated so fast, a remarkable evidence of which was offered in the vast amount expended in the construction of railroads; while of the large capital accumulated, a considerable portion was employed in banking. The incorporated bank capital increased nearly two hundred millions, and the private bank capital half as much. The report of the Treasury Department gave the latter amount at $118,036,080. The distribution of the incorporated banks among the several States is given in the appendix.

The increase of bank capital was large in the Atlantic cities, particularly in Boston and New York, of which the number and capital were respectively as follows:—

	1850. No.	1850. Capital.	1860. No.	1860. Capital.
Boston.... 30	30	$21,760,000	42	$36,581,700
New York.....31	31	33,600,602	55	69,758,777
Tatal 2 cities..61	61	55,360,602	97	106,340,477

This increase of banks, following the general expansion of business, brought with it the necessity of some improved means of adjusting the daily mutual balances. The fifty-five banks in New York city, for example, were each compelled to settle as many accounts daily. To obviate that great labor the clearing system was devised. Each bank sends every morning to the clearing house all the checks and demands it may have received the day previous, in the course of business, upon all others. These in a short time are interchanged, and the balance struck and paid. This system was established in 1853, and the amount of the exchange and balances annually were as follows:

Year.	Amount Exchanged	Balances.
1854.. ....$5,750,455,987	06	297,411,499
1855	5,862,912,098	33 289,694,136
1856	6,906,213,328	47 334,714,487
1857	8,333,226,718	06 365,313,901
1858	4,756,664,386	09 314,238,910
1859	6,448 005,956	01 364,984,682
1860	7,231,143 056	69 308,693,438
1861	5,915,742,758	05 353,383,944
Total for 8 yrs..$50,764,365,288	81	2,627,434,997

With the development of business the transactions grew immensely up to 1858, when they fell off nearly one-half under the panic of that year. They recovered gradually up to the breaking out of the rebellion. The banks of Boston and Philadelphia adopted the same system with similar results. The figures indicate to what an extent the credits of individuals, created in the operations of business, are cancelled through the intervention of the banks of the cities where the commerce of the whole country centralizes.

In the States of Illinois, Mississippi, Arkansas and Florida, after the collapse of 1837, no banks were again created up to 1850, and the three last named are still without them, with the exception of two small ones in Florida. Texas has a small bank at Galveston, and Utah, Oregon and New Mexico have none. In the District of Columbia four old banks expired by limitation of charters in the hands of trustees, and Congress refused to recharter them, but they continue to transact business.

It is probable that a large portion of the increase in banking, particularly at the West, has

been due to the introduction of the security system of New York, the idea of which seemed to popularize that which had previously been in bad odor. The following table shows the States which have adopted the free banking principle :—

States.	Year Adopted.	1860. Stocks Held.	Circulation.
New York	1838	$26,897,874	29,959,506
Michigan	1849	192,831	222,197
New Jersey	1820	962,911	4,811,862
Virginia	1851	3,584,078	9,812,197
Illinois	1851	9,826,691	8 981,723
Ohio	1851	2,153,552	7,983,889
Indiana	1852	1,349'466	5,390,246
Wisconsin	1854	5,031,504	4,429,855
Missouri	1856	725,670	7.884,885
Tennessee	1852	1,233,432	5,538,378
Louisiana	1853	5,842,096	11,579,313
Iowa	1858	101.849	568,806
Minnesota	1858	50,000	50,000
Total		$57,951,954	97,212,827

The principle cannot be said to have worked well except in New York, where it required constant alterations for many years to bring it to perfection. In Illinois it was an entire failure, and the new constitutional convention adopted a clause looking to the prohibition of any more banks and to the suppression of the existing circulation.

INSURANCE.

The progress of insurance in the United States has been rapidly following the development of commerce and trade, of which it is the necessary accompaniment, since the system of buying and selling goods on credit necessitates the resort to every possible means of making those credits safe. None is more obvious than that of requiring all goods to be insured. It follows that as commodities increase in quantity and value the amount to covered by insurance must expand in the same proportion. Unfortunately, however, there have been no regular statistics collated from year to year, as in the case of banks, by which that interesting index to the growth of the national wealth might be compared. The State of Massachusetts has paid more attention to the matter, and the annual reports are very valuable. The number of companies and amounts at risk have been as follows in that State :—

Year.	No. of Companes.	Capital Stock.	Fire Risks.	Marine Risk.
1840..	41	$7,475,000	51,998,596	50.631,877
1850..	30	6,106,875	63,948,273	76,082,520
1860..	117	6,353,100	348,923,289	101,972,974

The total property at risk has increased in the ten years $310,870,461. Under the present laws of New York the insurance returns are well organized. Taking the figures in connection with those of the leading ones of other States, the results are as follows :—

	Number of Companies.	Capital and Assets.	At Risk.
New York	135	$53,287,547	916,474,056
Massachusetts	117	6,353,100	450,806,203
Connecticut	12	5,364,686	279,322,184
Rhode Island	6	2,419,688	32,187,104
Philadelphia	10	6,510,601	139,229,374
New Orleans	9	6,738,031	221,100,000
Charleston	2	....	47,291,000
Augusta, Georgia.	1	952,858	7,000,000
Jersey City	1	179.713	5,231,061
Peoria, Illinois	1	363,995	6,806,377
Total		....	2,105,538,319

The amount at risk by all companies in the Union may approach three thousand millions, and the losses were reported as follows for 1860 :

Vessels and freights	$13,525,000
Cargoes	15,050,700
Total marine	28,575,700
By fire	22,020,000
Total losses	$50,595,700

Pennsylvania Canal.

The following is a synopsis of the cost of the Pennsylvania Canal east of the Alleghanies. It may prove useful for reference :

The Eastern Division commences at Columbia, and extends along the eastern bank of the Susquehanna to Duncan's Island, where it crosses the river and connects with the Juniata Division; the ascent from Columbia is 182 feet; distance 82 miles; cost $2,602,382. The Juniata Division commences at Duncan's Island, and extends to Hollidaysburgh, in Blair county, situate at the foot of the Allegheny mountains; ascent of lockage 576 feet; distance 180 miles; cost $3,437,334.

The Eastern and Western Divisions are here separated by the mountains;—formerly they were connected with a railroad called the Portage road, 36 miles in length, and cost $1,783,176. It ascended and descended the mountain with ten inclined planes, five on each side, which are now avoided by the Pennsylvania Central road. The total elevation of the Allegheny summit on this road was about 2,200 feet above tide water. This road extended, a few years ago, from Hollidays burg to Johnstone, in Cambria county, where it met the Western Division of the Pennsylvania Canal at that place.—*Phil. Intelligencer.*

RAILS AT BOSTON.

400 TONS RAILS—50 lbs. per lineal yard—T pattern—now ready for delivery at Boston. For sale by

CHAS. L. PERKINS,
Or, E. LIVINGSTON,
2m30 54 Exchange Place.

Burdon, Hubbard & Co.,
MACHINISTS,

MANUFACTURERS of Steam Engines, Sugar Mills, Saw and Grist Mills, Boilers, Hydraulic Presses, Pumps and Gearing for working mines, etc., etc. No. 102 Front st., Brooklyn, N. Y.

Messrs. MUNN & CO.,

PROPRIETORS OF THE SCIENTIFIC AMERICAN continue to solicit patents in the United States and all foreign countries, on the most reasonable terms. They also attend to various other departments of business pertaining to patents, such as Extensions, Appeals to United States Courts, Interferences, Opinions relative to Infringements, etc. The long experience Messrs. MUNN & CO. have had in preparing specifications and drawings, extending over a period of fifteen years, has rendered them perfectly conversant with the mode of doing business at the United States Patent Office, and with the greater part of the inventions which have been patented. Information concerning the patentability of inventions is freely given, without charge, on sending a model or drawing and description to this office.

Consultations may be had with the firm between 9 and 4 o'clock, daily, at their principal office, No. 37 Park Row, New York. We have also a branch office in the city of Washington, on the corner of F and 7th sts., opposite the United States Patent Office. This office is under the general superintendence of one of the firm, and is in daily communication with the principal office in New York, and personal attention will be given at the Patent Office to all such cases as may require it. Inventors and others who may visit Washington, having business in the Patent Offices, are cordially invited to call at their office.

MUNN & CO., are very extensively engaged in the preparation and securing of Patents in the various European countries. For the transaction of this business they have offices at Nos. 66 Chancery Lane, London, 29 Boulevard St. Martin, Paris, and 26 Rue des Eperonniers, Brussels. Probably three-fourths of all the European Patents secured to American citizens are procured through this Agency.

A pamphlet of information concerning the proper course to be pursued in obtaining Patents, the requirements of the Patent Office, etc., may be had gratis upon application at the Principal Office, or either of the Branches. They also furnish a Circular of information about Foreign Patents.

During the last sixteen years the business of procuring Patents for new inventions in the United States, and all foreign countries has been conducted by Messrs. MUNN & CO., in connection with the publication of the SCIENTIFIC AMERICAN; and, as an evidence of the confidence reposed in them by the inventors throughout the country, we would state that we have acted as agents for more than FIFTEEN THOUSAND Inventors! In fact, they have become identified with the whole brotherhood of Inventors and Patentees, at home and abroad. We would state that we never had a more efficient corps of Draftsmen and Specification Writers than are employed at present in our extensive Offices, and we are prepared to attend to Patent business of all kinds, in the quickest time and on the most liberal terms.

Communications and remittances should be addressed to
MUNN & CO.,
Publishers, No. 37 Park Row, New York

THE NEW YORK CENTRAL RAILROAD COMPANY,
TREASURER'S OFFICE, ALBANY, July 19, 1862.

EIGHTEENTH SEMI-ANNUAL DIVIDEND.—The Directors of this Company have declared a Semi-annual Dividend of Three per cent. on the Capital Stock thereof,—free of the United States Income Tax, which will also be paid by the Company—payable on the 20th day of August next, upon stock registered at New York, Boston and Albany, and on the 20th day of September next upon stock registered at London.

Stockholders whose stock is registered at New York, will receive their Dividends at the office of DUNCAN, SHERMAN & CO.; those whose stock is registered at Boston, at the office of J. E. THAYER & BROTHER; those whose stock is registered at Albany, at the ALBANY CITY BANK; those whose stock is registered at London, at the UNION BANK OF LONDON, the latter at the rate of 4s. 1d. to the dollar.

The Transfer Books will be closed at the close of business on Thursday, the 31st day of July inst., and will be re-opened at New York, Albany and Boston on the morning of Saturday, the 23d day of August next.

8t30 JOHN V. L. PRUYN, Treasurer.

CUMBERLAND COAL.

THE BORDEN MINING COMPANY ARE now prepared to fill orders and to make contracts for the season of 1862, for CUMBERLAND COAL, DELIVERABLE ON BOARD VESSEL AT Baltimore, Md., Alexandria, Va., or Georgetown, D. C. Purchasers may rely upon the Coal proving equal in quality to that heretofore furnished.

The Company also have the pleasure of announcing that they have completed, after two years' labor, their shaft and machinery upon their new property in the VALLEY OF GEORGE'S CREEK, and are lifting from the very heart of the Coal Basin a superior and perfect article of BITUMINOUS COAL, remarkably free from impurities of every description, and possessing qualities peculiarly adapting it to Locomotive use, and to generating steam under all circumstances. This Coal will be known in market as "BORDEN'S PIT COAL."

Our Railroad friends, and others requiring a superior Coal, will find it to their interest to give this a trial before contracting elsewhere.

For prices and other information apply to

WILLIAM BORDEN.

RENSSELAER POLYTECHNIC INSTITUTE,
TROY, N. Y.

THE thirty-ninth Annual Session of this Institution for instruction in the MATHEMATICAL, PHYSICAL, and NATURAL SCIENCES, will commence on Wednesday, Sept. 17th, 1862. Appropriate quarters, and a full supply of apparatus, will be provided, so that all the Courses of Instruction can be given precisely as heretofore. The new buildings for the Institute will be placed on a more commanding site, and be constructed as soon as possible.

The ANNUAL REGISTER, containing full information, can be obtained from

3m27 Prof. CHARLES DROWNE, Director.

NOTICE TO HOLDERS OF Construction Bonds of Dubuque & Pacific R. R. Co.

IN accordance with the order of the District Court of Dubuque County, Iowa, you are hereby required to present your bonds, on or before the 8th day of October, 1862, at the office of the Dubuque and Sioux City R. R. Co., in Dubuque, for conversion into preferred stock of said said company; otherwise the company will be under no obligation to convert the same.

IMPORTANT
TO
RAILROAD COMPANIES,
—o—
THE ATTENTION OF
RAILROAD MANAGERS
Is called especially to the Machines manufactured especially for the use of Railroad Companies by the proprietors of the
ALBANY AGRICULTURAL WORKS,
CONSISTING OF
EMERY'S PATENT
Railway Horse Power,
Made changeable for both right and left hand work, also with changeable degrees of forces and motions of the driving Pullies without changing the Speed and Labor of the Horses, thereby adapting them to the different uses required, as Sawing Wood, Pumping Water, Driving Elevators and Machine Shops, Foundries, etc. The Power is also adjustable to any degree of wear or use, so as to always insure its working with its greatest efficiency. All the running chains in these Powers are made of the best MALLEABLE IRON which gives to them triple the strength and durability of Grey Iron which last is universally used by all other Railway Horse Power Manufacturers—thereby at the same time lessening the weight of these several hundred pounds, making them less cumbrous for handling and transportation.

WOOD SAWING MILLS.
These Sawing Mills are made upon the most approved and convenient plans in use. Having a heavy plate fly wheel fixed to the Mandrill with a Ratchet or catch pulley for the driving band on the outside of the fly-wheel—the journal bearings are fitted with Babbet Metal—the wood carriage traverses on iron ways and gibbs—a 24 or 26 inch Saw is fitted, filed and set in working order and the plates warranted. When desired, a 14 inch saw is fitted, also a table for the purpose of slitting boards, etc., for fencing and carpenter work.
The whole together forming one of the most complete and desirable sets of machines for their purposes. They are already in very general use on nearly all the principal Railroads in this country.

PRICE,	ONE HORSE POWER	$90.00
"	TWO " "	120.00
"	SAW MILL, 24 in. Saw	37.00
	SETT BANDS and EXTRAS	5.00

PUMPING ENGINES
Of different kinds for Raising Water for Railroad tanks and other purposes, can be furnished on demand with Reciprocating or Rotary Pumps—fitted to be operated by these Horse Power and the best adapted for Railroad and Mining purposes. One of the SEVENTY-FIVE DOLLAR PUMPING ENGINES when driven by the TWO HORSE POWER has a capacity equal to any Four or Five Horse Power Steam Engine and Pumping Machine for the same purposes.

THRESHING MACHINES
Of the most approved kinds, for one and two horses and with simply Separators, or with Complete Cleaners which fit the grain for market in one and the same operations, and of the most approved construction.
They are very extensively introduced into all the grain-growing sections of this country and the world. They are especially adapted to the force of the above Horse Powers and can be driven by Steam or Water power with equal advantage. They will be furnished on the most liberal terms and warrants.
Liberal discounts made to RAILROAD COMPANIES from the above prices, and agents solicited for the sale of their manufactures.
For further particulars see the new Illustrated and Price Catalogue of the ALBANY AGRICULTURAL WORKS, furnished gratis on application to the proprietors.

THE GREAT FIRE IN TROY.
Unparalleled Triumph
OF
LILLIE'S SAFES!

The following certificates explain themselves:

TROY CITY BANK, May 21, 1862.

LEWIS LILLIE, Esq.—Dear Sir: I am sure it will give you as much pleasure to know as it does me to say, that in the recent fire of the 10th inst., which desolated our city and destroyed our Banking-house, the contents of our Bank vault, though the building itself was a heap of ruins, remained entirely unharmed. This result we attribute entirely to the fact that our old Wrought Iron Doors were, about two years since, exchanged for a set of your celebrated Chilled and Wrought Iron Doors and Frames. With the old doors, not a book or paper in the Vault could have been saved; as it is, nothing in it was even damaged, though exposed to the most intense heat.

Yours, respectfully, S. K. STOW, Cashier.

TROY, N. Y., May 14, 1862.

The undersigned, using **Lillie's Chilled and Wrought Iron Fire and Burglar Proof Safes,** at the time of the late disastrous fire in this city, would state that our safes were subjected to a severe test by fire, the heat varying in intensity, according to the locality and surroundings. The time they were exposed to the fiery ordeal, unprotected by water, varied from 24 to 72 hours. We would say that our money, papers, books, etc. were well preserved, and the Safes are suitable for further use. By comparison with Safes of other manufacture, equally exposed, we have no hesitancy in recommending Safes of Lillie's manufacture to the public on their demonstrated merit as entitled to unparalleled confidence as fire-proofs.

James Kenyon,

Jonathan Seaman.

Not dug out—nothing in them.

TROY, May 19, 1862.

The undersigned had one of **Lillie's Wrought and Chilled Iron Safes,** which went through the fire of the 10th of May. The Safe was exposed to a severe fire for over 24 hours. In falling it turned on its face, and when turned up to open the doors was red-hot. The back of the lower part of the Safe (behind the books) was filled with pennies, which, in falling over, pressed against the books, and brought them directly in contact with the doors. The wrappers on the pennies were mostly good. The books were unfit for further use, but the writing on them was partially legible and could be copied.

DUSENBURY & ANTHONY.

TROY, May 19, 1862.

This is to certify that we had in our store, in this city, when it burned, one of **Lillie's Small Safes,** which was in the fire, without water on the building or Safe. Most of the valuables were removed before the fire, and therefore we were not in haste to get the Safe out of the burning ruins. Some of the papers left in the Safe were legible when taken out, but most of them were charred.

I. M. SINGER & CO.,
Per G. W. BABCOCK, Agent.

This is to certify that the undersigned had one of LILLIE'S Patent Chilled Iron Safes in their store, which was burned during the late severe fire in this city, and we are happy to state, the Safe preserved all its contents in first-rate condition. All the papers were legible, and the books will do for further use, without even rebinding.

GRANT, NUTTING & CO.

The foregoing comprises all the Safes of my manufacture that were in the fire, and below will be found certificates from all the owners of Safes manufactured several years since, by World's Safe Company, who used my Patent Chilled Iron Shell, but not my Fire-Proof Cement.

WORLD'S SAFE COMPANY'S SAFES.

TROY, May 19, 1862.

The undersigned, having Safes manufactured by the late World's Safe Company, and which were subjected to the great fire of the 10th inst., in this city, would state that our Safes were exposed to a severe heat, being confined in the burning ruins, unprotected by water, from one to three days. On opening the Safes the contents were mostly legible, and to a far greater extent than could be reasonably expected of any Safe. We concur in the opinion that the Safes manufactured by LEWIS LILLIE, which were subjected to the fire for a longer time and preserved their contents, are superior and powerful protectors against fire, and by this test we are prepared to recommend them as such to public patronage.

Lyman Bennett,
Flood & Dunham,
John Hutchinson,
Silliman, Matthews & Co.,
E. L. Mallory,
E. H. Virgil,
Sup't National Express Co.

The undersigned, having Safes manufactured by the late World's Safe Company, and which were subjected to the great fire in this city, would state, that on opening our Safes the contents were mostly legible. We concur in the opinion that the Safes manufactured by LEWIS LILLIE, which were subjected to the fire for a longer time and preserved their contents, are superior and powerful protectives against fire, and we are happy to recommend them to public patronage.

W. & L. E. GURLEY,
R. L. & G. DRAKE,

H. E. & W. ALENDORPH, Absent.

TROY, May 19, 1862.

To whom it may concern: We would certify that when the recent fire broke out in this city, we took out from our Safe (which was made by World's Safe Company) all our books, papers, etc., and then left it to the flames without shutting the door, and the Safe will do for further use by being repaired, although the book case was destroyed by the door being left open through the fire.

ACKLEY & CO.

TROY, May 19, 1862.

The undersigned, using Safes manufactured by the World's Safe Company, at the time of the late disastrous fire on the 10th instant, in this city, would state that our Safes were filled with fire-brick for the fire-proof, and while several of this class preserved their contents, ours were considerably charred, and only a part legible. In justice to Mr. LEWIS LILLIE, we are pleased to state that Safes of his manufacture proved to be powerful protectors against fire, and have preserved their contents, after having been exposed to the fiery ordeal, unprotected by water, from one to three days.

Stephen Holton,
Bennett, Strickland & Fellows,
Corlous & House,
Luther Greenman,
E. W. Johnson,
J. H. Goodsell.

TROY, N. Y., May 17, 1862.

LEWIS LILLIE—Dear Sir: We were using at the time of the late severe fire of 10th inst., a Safe purchased in 1853 of the late World's Safe Company. The contents were considerably charred, but our Ledger is mostly legible, and we are able to copy it.

The Safe was subjected to a severe heat for over eighteen hours, and we are satisfied that if water had been thrown on the ruins, as is ordinarily the case, the contents would have come out uninjured. You will please repair our Safe, placing in it the improvements embraced in Safes of your manufacture, and oblige

SHELDON & GREENE.

N.B.—The above Safe is believed to have damaged the contents more than any of those named in this circular.

There were only seven Sheet Iron Safes, made by Herring and others, outside of the railroad depot, that were exposed to the fire, four of which were entirely burnt out; the fifth was saved by being early cooled off by water; the remaining two were not severely tested.

LEWIS LILLIE,
H. R. HUBBELL, Agent,

Our Railroads and the Crops.

It is now all but certain that the enormous business in the transportation of breadstuffs, provisions, cattle, etc., thrown upon our leading railroads the past and present year, will continue for twelve months longer. The crops already gathered or approaching maturity promise to be quite as abundant as those of 1861; while the demands of Western Europe will be little if any less. It is seldom indeed that for two or three consecutive years we find an unusually large surplus at home, connected with a correspondingly small production in other countries; the present, however, is one of those rare occasions which show the dependence of nation upon nation as truly as of every man upon his fellow.

While during the early part of the summer our neighbors to the southward were visited with almost incessant rains, retarding very seriously military operations, those lying to the northward were suffering seriously from *drought*. In Upper Canada this prevailed to such an extent in the month of June that large numbers of cattle were killed, owing to the lack of grass to sustain life. In the latter part of that month some light rains fell, and subsequently they have been abundant; but they did not come in season to produce a full crop of the early ripening grains. Corn may make up for the deficit; but the provincials will not be able to export their usual quantities of wheat or slaughtered animals. The drought appears to have affected that portion of the State of New York lying north of the Adirondacs, particularly the counties of St. Lawrence and Jefferson.

From the great West we have glowing accounts about the crops. Ohio alone, it is estimated, will produce 30,000,000 bushels of grain, of which 17,000,000 will be a surplus for exportation. Should the people of the whole Northwest have raised as much of "the staff of life," man for man, as those of Ohio, the total yield of grain would not fall short of 107,000,000 bushels, of which 60,000,000 would be exportable. This would leave Kentucky and Tennessee out of account altogether, and give only one-half the estimate for Missouri.

Without placing too much reliance, however, upon mere estimates, we may accept as true the reports which come up from every quarter. The crops will as a whole be heavier than those of 1861, the yield of corn probably exceeding anything of the sort ever produced in the country. At the same time we find ourselves with still a a very large surplus on hand from last year—a surplus that all the avenues yet opened are unable to carry off to the East. Since the first of January the two rival cities of Chicago and Milwaukee have shipped over 19,000,000 bushels or its equivalent, in nearly equal amounts from each. This, for a period of little over six months, exceeded anything ever before witnessed in the history of either city.

To what extent the crops in Europe will be a failure this year can only be conjectured. In the British Islands they will barely be an average, and may be still less, as at late dates the country was suffering from unusually heavy rains. France will not be so badly off as in 1861; but on the other hand, some of the sources of supply do not look at all promising. Several provinces in South Russia have sustained much damage from drought and the political condition of that country is far from being as favorable to commerce as it might be. The Hungarian crops have been short; those in Italy but moderately good. That country, like England and France, is undergoing some great social changes, which must ere long make her a regular importer of all kinds of provisions.

The effect of this foreign demand upon the prosperity of our leading railroads must be marked. The Central, the Erie and the Pennsylvania never before transacted so large an amount of business as last year, in spite of the war. The last named earned $1,300,000 more than in 1860, and we hear that the earnings of the Erie will reach to about $7,300,000 during the present year. Those of the Central are put at over nine millions by current report. It is evident, however, that tributary lines will share largely in this continued prosperity. The business of the Illinois Central may still suffer slightly from the closing of the Mississippi, yet the falling off in receipts last year, in spite of that sad occurrence, was very slight. The three great lines crossing the peninsula of Michigan, the Cleveland and Toledo, the Wabash Valley and its feeders, the Cleveland, Columbus and Cincinnati, the Bellefontaine—in fact, all the lines traversing the great Northwest and pointing in the direction of this city, Boston, Philadelphia and Baltimore—all find their hands full. With diminished expenditures in nearly every case two such years of prosperity ought to take our railroad interests out of the slough and make most of the stocks in them remunerative.

Lehigh Coal and Navigation Company.

We have received the report of this company for the fiscal year ending December 31, 1861, from which we learn that the repairs to the company's navigation were completed on the 10th of March, and that on the 15th of the same month water was let in and the entire line navigable for boats. On the 25th, the repairs to the roads were finished, and everything in readiness for the transportation of coal from the mines. Regular shipments, however, from Mauch Chunk did not begin before the 1st of April. From the opening to the close of the season, on the 10th of December, navigation continued without interruption. For the year the shipments of coal were as follows:

At Mauch Chunk	391,583 tons.
At East Mauch Chunk	149,535 "
At Penn Haven	254,398 "
At Rockport	88,115 "
At White Haven	111,074 "
Total shipments of coal	994,705 "

—showing a falling off, as compared with the shipments of the preceding year, of 96,337 tons. There was also taken from the company's Tamaqua Mines, 13,838 tons. The distribution of the coal was as follows: Consumed on the line of the

Lehigh Canal, 139,875 tons; passed into the Morris Canal at Easton, 272,728 tons; went into the Delaware Division Canal, 582,102 tons. Of the coal that entered the Delaware Division Canal, 288,584 tons reached Bristol; 267,347 tons passed over, via the outlet lock at Wells' Falls, into the navigable feeder of the Delaware and Raritan Canal—leaving 26,171 tons as the quantity disposed of on the line of the Delaware Division Canal.

The shipments of lumber for the year were 26,247,128 feet—showing a falling off from the previous year of 19,278,436.

The freight of all descriptions carried on the company's canal amounted to 1,145,880 tons—of which 84,987 tons were ascending, and 1,060,893 tons descending. In this is included 49,652 tons of iron ore, 25,738 tonf iron, and 22,860 tons lime and limestone.

The profits for the year, as appears by the annexed statement, were $528,249 93; the expenses, $201,313 73; and the net earnings, $326,932 20—being equal to an interest of over 13 per cent. on the capital stock.

PROFIT AND LOSS ACCOUNT.

Balance to credit Jan. 1, 1861	$3,546,702 94
Water and ground rents, etc	18,513 77

Tolls on navigation	402,106 39
	$4,074,948 87
Dividend, May 28, 1861, 3 per cent.	$74,398 50
" Nov. 26, 1861. "	74,398 50
State tax on capital	7,439 85
Balance of interest account	112,794 87
Canal repairs	53,808 91
Railroad expenses	27,270 10
Balance to credit Jan 1, 1862	3,724,838 14
	$4,074,948 87

The expenditure for the year upon the company's navigation was moderate; and was mainly for ordinary repairs, and for renewals of the usual character. The report says:

In the last Annual Report it was stated that, for the reasons therein given, an agreement had been entered into with the Nanticoke Railroad Company, by which they were to receive in the shape of a loan, to be secured by a first mortgage of the road and its franchises, assistance in the construction of a road to connect, at the foot of the planes, the Lehigh and Susquehanna Railroad with the colleries opened and to be opened in the Wyoming Valley.

Under this agreement, about $41,000 has been advanced to that Company; a lease of the road for twenty years has been taken; and that portion of the road lying between the foot of the planes and the mines of the Baltimore Coal Company, and embracing a number of other colleries now in operation, is approaching completion, and is, at this time, in use for the transportion of coal to this Company's railroad, to be shipped, at White Haven, on to the Company's canal.

Upon another portion of the road, extending down the valley from the foot of the planes, a large amount of work has been done; but its earlier completion has been retarded by the operation of cause similar to those which have checked the progress of many other enterpises and industrial undertakings. Notwithstanding all which, there is reason to expect from that quarter a very handsome increase of trade, during the current year, on the Company's canal.

Considerations, similar in their character to those just stated, have induced the Board to cooperate in the building of the Nesquehoning Valley Railroad; by the construction of which, with extraordinary advantages of grade and distance, one of the finest coal fields in the State will be brought into direct and close connexion with the Company's canal near Mauch Chunk, and a large and valuable addition made to the Company's business.

There was no increase during the year in the capital stock of the company. The funded debt was reduced $628,687 33; and the floating debt increased $53,321 27. The liabilities of the company, including capital stock, funded debt, and pecuniary obligations of every kind, were at the close of the year, $5,681,860 97—being $575,366 06 less than they were at the close of 1860. During the year the whole mortgage loan of 1861 was extinguished. The following will show the financial condition of the company January 1, 1862:

LIABILITIES.

Capital stock	$2,479,950 00
Common loans	2,788,181 92
Floating debt	352,608 33
Unpaid dividends	7,024 70
Arrears of Interest	54,096 02
	$5,681,860 97
Balance to the credit of profit and loss account	3,824,838 14
	$9,406,699 11

ASSETS.

Canal and river improvements	$4,455,000 00
Lehigh and Susquehanna Railroad	1,380,000 20
Real estate, cost of coal mine lands and other lands, railroads to the several mines of the company, and other improvements, wharves and landings at Philadelphia, &c.	1,522,473 22
Moveable effects, Debts due the company, bills receivable, bonds and mortgages, &c.	1,089,001 50
Contingent fund; cost of investments	913,069 11
Cash on hand	47,155 28
	$9,406,699 11

The Brooklyn City, and the Coney Island Railroad Companies.

POWER OF THE LEGISLATURE TO GRANT RAILROAD FRANCHISES IN THE STREETS OF CITIES. A PRIOR GRANT DOES NOT CONFER UPON A COMPANY AN EXCLUSIVE PRIVILEGE TO THE USE OF THE STREET.

The Brooklyn City and Newton Railroad Company were plaintiffs, and the Coney Island and Brooklyn Railroad Company were defendants. The routes which these two companies operate, enter the city of Brooklyn from opposite directions, convergo towards Fulton Ferry, and unite in Water Street, two blocks distant from the ferry.

The plaintiffs were organized under the general railroad act of the State; and on the 30th of July, 1860, they procured from the Common Council of the city of Brooklyn, authority to construct and maintain their road through certain streets of said city of which Water street is one. Under this grant they proceeded to make surveys and a map of the route to be filed, and entered into contracts for the construction of the track, which was to be a single one in Water street.

The defendants were also formed under the general railroad law; but they did not assert in this action, a right or title to construct their road through the city of Brooklyn, pursuant to the provisions of the general railroad act, or by the authority and consent of the Common Council; but they obtained from the Legislature an act which was passed on the 20th of April, 1861, by which they are authorized to construct and operate their road through the several streets designated on a "map or profile of said road, made by Jarvis Whitman, City Surveyor," without naming in the statute the streets intended, or even stating where the map was, or was to be filed. They were also authorized to lay their road with rails of a less weight than those prescribed by the general law. The condition upon which they were allowed these privileges was that they obtain "the permission of the Common Council of said city to construct said railroad within said city, or the consent of a majority of the owners of property fronting upon any street or avenue in said city, through or over which it is proposed to lay said railroad."

The defendants, on or about the 27th day of June, 1861, proceeded to tear up Water street in the city of Brooklyn, in order to lay down a double track. The plaintiffs then commenced this action, and obtained an injunction restraining the defendants from building, operating or using any track through or in Water street, or any part thereof. In the answer which was put in by the defendants they asserted their incorporation, and the passage of the special law referred to; and they alleged and relied upon the consent of a majority of the owners of that portion of Water street, to the construction of the road. The Supreme Court denied a motion made at Special Term, to dissolve the injunction, and an appeal was then taken to the General Term, held by three Justices, who now reversed the order made at Special Term and dissolved the injunction. The following is the opinion of the court, upon the points decided, rendered at the decision of the case.

EMOTT, J.—The plaintiffs' counsel argues against the validity of the act under which the defendants have proceeded, that it will take from the municipality of Brooklyn their right to the streets, without compensation. We are not aware that the municipality of Brooklyn have any rights of property in the streets of the city, nor do we agree that the use of a street by a city railroad using cars propelled by horses, is an appropriation of property so as to require compensation.

It is further urged that the act under consideration should be construed to require, in order to confer upon the defendants the right to lay down their track, both the permission of the Common Council and the consent of the owners of property on the streets. In other words it is insisted that the words "or" in this part of the act, must read "and." I confess I see no reason for putting such a construction upon the statute. The Legislature possessed the power to confer this privilege of building and using a horse railroad in the streets of the city of Brooklyn, without the consent of the owners of the soil over which the streets are laid out, because such a use of the street is merely a mode of exercising the public right of travel, and not an appropriation of the property of the owners of the land, requiring compensation in damages. Such a franchise or privilege may also be created or conferred without the consent of the city authorities, if the Legislature see fit to repeal, *pro tanto*, the portions of the general railroad act, or of any other general statutes requiring such a consent. In the act we are now considering, the Legislature have conferred such a privilege, on

condition that the grantees obtain either the consent of the adjoining owners, or the permission of the city authorities. That is the literal meaning of their act; and as they had the power to confer the franchise without imposing either condition, I am not able to see upon what principal we should be authorized to force a construction of the statute which would require both. * * *

The defendants in their answer aver that they have procured the consent of a majority of the owners of the property fronting on Water street between Main and Fulton streets, and rely on that as their justification. * * * To my mind the affidavit and answer, under the circumstances, would not furnish sufficient evidence of the existence and execution of such a consent as is required by this clause of the statute. If the case turned upon that, I should be obliged to hold, as I suppose the judge who heard the motion to dissolve the injunction did hold, that the defendants had not made out a compliance with the conditions upon which their franchise was conferred.

The next question is, and that is the vital question in the case, whether in so doing they have violated any right, or infringed any franchise of the plaintiffs, and whether the latter can maintain this action to restrain them.

It sufficiently appears by the affidavit of Mr. Catherwood, that the construction of the defendants' road or track will not necessarily interfere with the construction or use of that of the plaintiffs'. The inconvenience or injury, if any, is to the public, in the ordinary use of the street or to the adjoining proprietors. Nor is there any allegation in the papers that the use of this portion of their road, when constructed by the defendants, will interfere with the travel, or lessen the profits or value of the franchise of the plaintiffs. * *

If the effect of a construction of the defendants' track in this street, in the manner they propose, would be practically to exclude the plaintiffs from the street, that would be a proper subject of complaint, and such a course of proceeding would no doubt be restrained. But that is not the theory of this action. The plaintiffs claim that their franchise extends to and includes an exclusive right to the use of Water street, and of every other street in which they are authorized to lay down and operate their horse railroad. This is an entire mistake. There is no such exclusive privilege contained in the grant or permission of the Common Council to the plaintiffs, for the construction and use of their road; and it is well settled that no such privilege is implied in the grant of such a franchise. * * * * * * *

The construction of another railroad through the same street is not in itself an infringement of the franchise of the plaintiffs, or an incroachment upon their rights. Conceding that the use of the street by the defendants is unlawful, it is not an injury to the plaintiffs, unless it prevents them from constructing their road or from using it, and no action can be maintained by the plaintiffs to restrain an act not specially injurious to them.

The acts of the defendants, if unauthorized and unlawful, as I assume that they are upon these papers, may be productive of injury to the community at large. The defendants are obstructing a common highway, and this, if unauthorized is a public nuisance. But no special injury results to the plaintiffs from that act alone, or from a mere common nuisance. No one but the persons or officers intrusted by the law with the protection of the rights of the public, can invoke the aid of this court to restrain such a nuisance. Even if the defendants should proceed unlawfully to use the railway which they are laying down, and to demand and receive tolls or fares without authority. Yet so long as this did not interfere with the profits or revenues of the defendants, it would not be for them to proceed against such a usurpation.

Conceding therefore all which is alleged against the defendants, still, until they are shown to be committing or threatening some act which is not only an interference with the rights of the public, but especially injurious to the plaintiffs, they cannot be restrained at the suit of the latter. There is no sufficient allegation or proof of any such injury in the present case, and the prayer of the complaint and the injunction granted upon it go much farther.

The order denying the motion to modify or dissolve the injunction should be reserved and an order entered dissolving the present injunction, with liberty to the plaintiffs to apply upon an amended complaint or otherwise, for an order forbidding the defendants from interferring with them in the construction, maintenance or use of their track.

The receipts of the Grand Trunk Railway of Canada for the week ending July 26th, 1862, were:

16,952 passengers	$21,493 04
Mails and sundries	2,933 68
Freight and live stock, 11,481 tons	38,206 63
Total	$62,633 35
Corresponding week of last year	72,623 77

The earnings of the Chicago, Burlington and Quincy Railroad Line for 3d week in July, 1862, were $51,654 42
Do., 1861 43,357 44

Increase $8,296 98

The Amended Tariff.

THE NEW RATES OF CUSTOMS DUTIES FROM AUGUST 1, 1862.—ALPHABETICAL CATALOGUE OF ALL DUTIABLE AND EXEMPTED ARTICLES.—THE SPECIFIC AND THE AD VALOREM DUTIES.—ARTICLES REMOVED FROM THE EXEMPTED TO THE DUTIABLE LIST.

The following will be found to contain a complete and correct catalogue of all dutiable and exempted articles, together with the imposts to be in future paid upon the importation of the former. It has been carefully compiled from the Tariff acts of March, August and December of last year, and the New Tariff act just passed. The latter not only increases the rates upon nearly every article comprised in the three former, but it also removes several articles from the exempted to the dutiable list.

Where duties upon any articles appear in both the "specific" and "ad valorem" columns, both rates of duty are required to be paid.

Cornmeal 10
Cotton Raw, per lb .... 0 00½ ..
Manufactures of, not bleached colored, stained, painted, or printed and not exceeding 100 threads to the square in., counting the warp and filling, and exceeding in weight per square yard 5 oz., per square yard .... 0 01¼ ..
Finer or lighter goods of like description, not exceeding 140 threads to the square inch, counting the warp and filling, per square yd.. 0 02½ ..
Ditto, exceeding 140 and not 200 threads, ditto, per square yard.. 0 03¾ ..
Ditto, exceeding 200 threads, ditto, per square yard .... 0 05 ..
All goods embraced in the foregoing Schedules, if bleached, *an additional duty* of per sq. yard. 0 00½ ..
Ditto, and if printed, painted, colored, or stained, *a further duty of* 10
All goods embraced in the foregoing schedules, (except) Jeanes, Denimes, Drillings, Bed-tickings, Ginghams, Plaids, Cottonades, Pantaloons Stuffs, and goods of like description, not exceeding 16 cents per square yard in value, if printed, painted, colored, or stained, shall be considered to be bleached goods, and shall pay *in addition to the rates of duty provided for bleached goods*, per square yard. 0 01 ..
Jeanes, Denimes, Drillings, Bedtickings, Ginghams, Plaids, Cottonades, pantaloons Stuffs, & goods of like description, not exceeding, in value per square yard 16 cents per square yard 0 02 10
All plain woven Cotton goods, not included in the foregoing schedules, and Cotton goods of every description, the value of which shall exceed per sq. yd. 16 cents 30
No cotton goods having more than 200 threads to the square inch, counting the warp and filling, shall be admitted to a less rate of duty than is provided for goods which are of that number of threads.
Thread, Spool and other Thread of Cotton 40
Shirts and Drawers, woven or made on frames, composed wholly of Cotton, and Cotton Velvet 30
All manufactures composed wholly of Cotton, bleached, unbleached, printed, painted or dyed, not otherwise provided for. 35
Cords, Gimps and Galloons 35
Laces, Insertings, Trimming Laces and Braids 25
Laces, colored 35
Court Plaster 35
Cowbage Down 20
Crayons of all kinds 30
Cubebs, per lb .... 0 10 ..
Cudbear and orchil. 10
Currants, per lb .... 0 05 ..
Cutch or Catechu 10
Cutlery of all kinds 35
Cuttle-fish bone, per lb .... 0 05 ..
Dates, per lb .... 0 02 ..
Diamonds, Glaziers', set or not set... 10
Dragons' Blood, per lb. .... 0 10 ..
Dutch and Bronze Metal in leaf 10
Earthenware, Brown and Common Stoneware, Gas Retorts, Stoneware not ornamented, and Stoneware above the capacity of 10 gallons 20
Emery, Ore or Rock, per ton. .... 6 00 ..
Manufactured, ground or pulverized, per lb .... 0 01 ..
Engraved plates of steel, copper, wood or any other material 25
Engravings, see Books,
Envelopes, Paper 35
Ergot, per lb .... 0 20 ..

Extract of Indigo; Extract of Madder; Extractions of Logwood and other Dyewoods 10
Ether 20
Fans and Fire Screens, of every description, of whatever material composed 35
Feathers and Downs for beds or bedding, of all descriptions 30
Ostrich, Vulture, Cock and other ornamented feathers, crude or not dressed, colored or manufactured 20
Ditto, when dressed, colored or manufactured 40
Feldspar 20
Fig Blue 20
Figs, per lb .... 0 05 ..
Fire Crackers, per box of 40 packs, not exceeding 80 to each pack .... 0 50 ..
And in the same proportion foa a greater number.
Fire Wood 20
Fish Glue or Isinglass 30
Skins 20
Mackerel, per barrel .... 2 00 ..
Herrings, pickled or salted, per bbl 1 00 ..
Anchovies, preserved in Salt 30
Anchovies, Sardines, Salmon and all other fish preserved in oil 30
Salmon, pickled per barrel .... 3 00 ..
All other fish pickled, in barrels, per barrel .... 1 50 ..
All other foreign caught fish, imported otherwise than in barrels or half barrels, or whether fresh, smoked or dried, salted or pickled, not otherwise provided for, per 100 lbs .... 0 50 ..
Flax, see Hemp.
Flints, and Flint, ground 10
Flocks, Waste or Shoddy 20
Frames and Sticks for Umbrellas, Parasols and Sunshades, finished or unfinished 35
Frankfort Black 20
Fruit Ethers, Essences or Oils of Apple, Pear, Peach, Apricot, Strawberry and Raspberry, made of Fruit Oil, or of Fruit, or imitations thereof, per lb .... 2 50 ..
Limes, Lemons, Oranges, Bananas and Plaintains 20
Fruits, Green, Ripe or Dried, not otherwise provided for 10
Fuller's Earth, per ton .... 3 00 ..
Fur Caps, Hats, Muffs and Tippets, and all other Manufactures of Fur, or of which Fur shall be a component material 35
Furs, Undressed 10
Dressed 15
Dressed, when not on the Skin 20
Furniture, Cabinet and Household 35
Gamboge 10
Garancine 10
Ginger Root, per lb .... 0 05 ..
Ground, per lb .... 0 08 ..
Preserved or Pickled 40
Glass, Cylinder or Broad Window, not exceeding 10x15 inches per square foot .... 0 01 ..
Ditto, above 10x15, and not above 16x24 .... 0 01½ ..
Ditto, above 16x24, and not above 24x30 .... 0 02 ..
Ditto, above 24x30, not exceeding 1 lb. per square foot in weight, per square foot .... 0 03 ..
If weighing over 100 pounds per 100 square feet, an additional pro rata duty. All Glass imported in sheets or tables, without reference to form, shall pay the highest rates of duty.
Crown, not exceeding 10x15, per square foot .... 0 01½ ..
Ditto, above 10x15 and not above 16x24 .... 0 02½ ..
Ditto, above 10x24 and not above 24x50 .... 0 04 ..
Ditto, above 24x50 .... 0 05 ..
Weighing over 150 pounds per 100 square feet, an additional duty on such excess of 4 cents per pound.
Fluted, rolled or rough plate, not including crown, cylinder, broad, or common window glass, not exceeding 10x15 inches, per 100 square feet .... 0 75 ..
Ditto, above 10x15, and not above 16x24 per square foot .... 0 01 ..
Ditto, above 16x24, and not above 24x30 .... 0 01½ ..
Ditto, above 24x30 inches, per square foot .... 0 02 ..
All fluted, rolled, or rough plate glass, weighing over 100 lbs. per 100 square feet, shall pay an additional duty on the excess at the same rates.
Cast polished plate, unsilvered, not exceeding 10x15 inches, per square foot .... 0 03 ..
Ditto, above 10x15, and not above 16x24 .... 0 05 ..
Ditto, above 16x14, and not above 24x30 .... 0 08 ..
Ditto, above 24x30, and not above 24x60 .... 0 25 ..
Ditto, above 24x60 .... 0 50 ..
Cast polished plate, silvered, or looking-glass plates, exceeding 10x15 inches, per square foot .... 0 04 ..
Ditto, above 10x15, and not above 16x24 .... 0 06 ..
Ditto, above 16x24, and not above 24x30 .... 0 10 ..
Ditto, above 24x30, and not above 24x60 .... 0 35 ..
Ditto, above 20x60 .... 0 60 ..
No Looking-Glass Plates, or Plate Glass Silvered when Framed, shall pay a less rate of duty than that imposed upon similar glass of like description not framed, but shall be liable to pay in addition thereto 30 per cent. ad valorem upon such frames.

Tow of Flax, per ton .... 5 00 ..
Grass Cloth 30
Jute Yarns 20
All other manufactures of Jute or Sisal Grass, not otherwise provided for 25
All Hemp, or preparations of Hemp, used for naval purposes by the Government of the United States, shall be of American growth or manufacture,

provided that the same can be obtained of as good quality, and at as low a price.

Hides, Raw, and Skins of all kinds, whether Dried, Salted or Pickled 10

Honey, per gallon. .... 0 15 ..

Hoods, see Bonnets.

Hops, per lb.. .... 0 05 ..

Horns, and Horn Tips..... 10

Indian Corn, or Maize, per bushel... 0 10 ..

Indian Rubber, Raw, or Unmanufactured 10

Boots and Shoes 30

Braces, Suspenders, Webbing, or other Fabrics composed wholly or in part of India Rubber, not otherwise provided for.... 35

And Silk, Manufactures of, or of India Rubber and Silk, and other Materials..... 50

Ink, Printer's Ink, and Ink Powder 35

Iodine, Crude, per lb..... .... 0 50 ..

Refined, per lb .... 0 75 ..

Ipecacuanha, or Ipecac, per lb..... 0 50 ..

Iron, Bar, rolled or hammered, comprising Flats not less than 1 in. or more than 7 in. wide, nor less than quarter of an in. or more than 2 in. thick; Rounds not less than half of an in. nor more than 4 in. in diameter; and Squares not less than half an in. nor more than 4 in. square; not exceeding $50 per ton in value, per ton .... 17 00 ..

Ditto, exceeding $50 per ton in value, per ton .... 18 00 ..

Bar, rolled or hammered, comprising Flats less than quarter of an in. thick, or more than 7 in. wide; Rounds less than half an in. or more than 4 in. in diameter; and Squares less than half an in. or more than 4 in. square, per ton . 20 00 ..

Iron in slabs, blooms, hoops, &c., less finished than bar but more advanced than pig, except castings, to be rated as iron in bars. None of the above iron shall pay a less rate of duty than 20 per cent.

Imported in bars for railroads and inclined planes, made to patterns, and fitted to be laid down without further manufacture, per ton. 13 50 ..

Railroad Iron, partially or wholly worn, may be imported without payment of duty, under bond, to be withdrawn or exported after it has been repaired or re-manufactured.

Boiler and other Plate, per ton .... 25 00 ..

Wire, drawn and finished, not more than quarter of an inch in diameter, nor less than No. 16 wire gauge, per 100 lbs..... .... 1 75 15

Ditto, over No. 16, and not over No. 25, per 100 lbs 3 00 15

Ditto, over or finer than No. 25, per 100 lbs..... .... 4 00 15

Wire, covered with Cotton, silk or other material, to pay 5 cents per lb. additional.

In pigs, per ton .... 6 00 ..

Sad Irons, Tailors' and Hatters' Irons, Stoves and Stove Plates, per lb..... .... 0 01¼ ..

Cast Iron Steam, Gas and Water Pipes, per 100 lbs .... 0 75 ..

Cast Iron Butts and Hinges, per lb. 0 02 ..

Hollow Ware, Glazed or Tinned, per lb..... .... 0 03 ..

Castings, not otherwise provided for, or exempted from duty..... 30

Old Scrap, per ton..... .... 6 00 ..

Band and Hoop, Slit Rods and all other descriptions of rolled or hammered, not otherwise provided for .... 25 00 ..

Cut Nails and Spikes, per lb..... 0 01¼ ..

Cables or Chains, or parts thereof, per 100 lbs..... .... 2 00 ..

No Chains made of wire or rods of less diameter than half an inch, to be considered a Chain Cable

Anvils, per 100 lbs.. .... 2 25 ..

Anchors, or parts thereof, per 100 lbs. 2 00 ..

Wrought Board Nails, Spikes, Rivets and Bolts, per lb .... 0 02¼ ..

Bed Screws and Wrought Hinges, per lb..... .... 0 01¾ ..

Chains, Trace Chains, Halter Chains and Fence Chains, made of wire or rods half an inch in diameter or over, per lb..... .... 0 01¾ ..

Ditto, under half and not under quarter inch, per lb..... .... 0 02¼ ..

Ditto, under quarter inch and not under No. 9 wire gauge, per lb.. 0 03 ..

Ditto, under No. 9 wire gauge 30

Blacksmiths' Hammers and Sledges and Axles or parts thereof, per lb. 0 02½ ..

Maleable in Castings, and not otherwise provided for, per lb..... 0 02 ..

Horse-shoe Nails, per lb..... .... 0 04½ ..

Steam, Gas, and Water Tubes and Flues of Wrought Iron, per lb... 0 02¼ ..

Wrought Iron Railroad Chairs, and Wrought Iron Nuts and Washers ready punched, per ton .... 30 00 ..

Cut Tacks, Brads and Sprigs, not exceeding 16 oz. to the 1,000 per 1,000 .... 0 02 ..

Ditto, exceeding ditto per lb..... 0 02 ..

Smooth or polished sheet, by whatever name designated, per lb .... 0 02½ ..

Sheet, common, or black, not thinner than No. 20 wire gauge, per ton .... 23 00 ..

Ditto, thinner than No. 20, and not thinner than No. 25, per ton .... 29 00 ..

Ditto, thinner than No. 25, per ton. 35 00 ..

Tin Plates, galvanized, galvanized iron, or iron coated with any metal by electric batteries, per lb.. 0 02½ ..

Locomotive Tire, or parts thereof, per lb..... .... 0 02½ ..

Mill Irons and Mill Cranks of Wrought Iron, and Wrought Iron for Ships, Steam Engines and Locomotives, or parts thereof, weighing each 25 pounds or more, per lb..... .... 0 01¾ ..

Screws, commonly called Wood Screws, 2 in. or over in length, per lb..... .... 0 06½ ..

Ditto, less than 2 in. in length, per lb. 0 09½ ..

Screws, washed or plated, and all other Screws of Iron, except Wood Screws 35

Squares, marked on one side, per lb. 0 02½ 30

Ditto, others made of Iron or Steel, per lb..... .... 0 05 30

Manufactures of, not otherwise provided for. 35

No allowance or reduction of duties is made for partial loss or damage in consequence of rust, except on polished Russia Sheet Iron.

Andirons, made of Cast Iron, per lb. 0 01¼ ..

Hollow Ware and Vessels of Cast Iron, not otherwise provided for, per lb..... .... 0 01¼ ..

Iron Liquer..... 10

Isinglass, or Fish Glue 30

Ivory, unmanufactured and Vegetable Ivory 10

Jalap, per lb..... .... 0 50 ..

Japanned Ware of all kinds, not otherwise provided for. 40

Jet, and Manufactures of Jet, and imitations thereof 35

Jewels and Jewelry, Diamonds, Cameos, Mosaics, Gems, Pearls, Rubies, and other precious stones when not set 5

Ditto, when set in gold, silver or other metal, and on imitations thereof, and all other jewelry... 25

American Railroad Journal.

Saturday, August 9, 1862.

Atlantic and St. Lawrence Railroad.

A prospect is now on foot, to modify essentially the agreement made between the Grand Trunk and the St. Lawrence and Atlantic Railroad Companies in 1853. By the terms of that contract the former were to pay six per cent. upon the stock and bonded debts of the latter, the whole amounting to $5,966,900, or a fraction over $40,000 per mile. The lease extended to a period of 999 years; but the Grand Trunk had the privilege of rescinding it, in which case the road with all its improvements must revert to its original owners. The outlays since made upon it by the lessors are estimated at £333, 161, or $1,600,000 in round numbers, making the cost at this time about $50,700 per mile, This is barely two thirds that of the Grand Trunk; although the country traversed by it was in general much more difficult for railroad construction.

A committee of bond and shareholders in the Grand Trunk, consisting of Sir J. Paxton, Mr. T. S. Cutbill, and Mr. C. G. Hale, have recently presented a report in London, on the Canadian Railway Arrangements Act, passed during the late session of the Provincial Parliament. It authorized certain concessions on the part of preference and other bondholders, on the acceptance of this scheme by a majority of each of these interests at a public meeting, which is to come off on the 8th instant. The subject, we observe, is exciting a lively interest among those English capitalists who are owners of stock or bonds issued by that company. As might be expected, the disappointed "victims" are numerous and clamorous, agreeing only in one point—hearty abuse of the government and people of Canada. The committee have been trying to smooth down matters before the meeting, and to present a plan that would be generally accepted; hence the report alluded to.

They express a belief that the prefered stock and bondholders will hardly accept the arrangement, unless the lessors of the Atlantic and St. Lawrence Railroad be willing to make a reduction in the dividends payable to them by the agreement of 1853. It is accordingly proposed to reduce the interest on the £100,000 of sterling bonds from six to *five* per cent. for a period of ten years, adding thereto "any surplus profits earned on the Atlantic road up to six per cent. per annum." Next, that for the same period the rate payable to the stockholders in the same line should be *four* per cent. to this, however, should be added all the profits arising from the purchase of bonds below par by means of the sinking fund—a provision, we apprehend, which will go but a short distance to make up the deficit. Finally, it is proposed that the arrears of interest on those shares be capitalized by the issue of a like amount of stock bearing interest at the same rate as ordinary shares, but ranking after them, as a charge upon the Grand Trunk line.

In behalf of this arrangement it is maintained that the Atlantic and St. Lawrence road does not earn over 2½ per cent. per annum net on its cost, and that, therefore, its shareholders will still be receiving a decent profit at the expense of the Grand Trunk concern. This arrangement, the committee think, would be better for all parties than to throw up the road to its original proprietors after having expended such a large sum in improving it. As the rent comes out of the working expenses of the Grand Trunk, *Herepath's Railway Journal* observes, that the Atlantic and St. Lawrence "will still have a security practically equal to our funds, and four per cent. interest instead of three."

There is this, however, to be said in reply. The line has been under English management since its completion. Now, that kind of management may do very well in England and not answer among us. Successful in their own country in doing things in their own way, Englishmen seldom learn to adapt themselves to conditions essentially different from those in which they have been accustomed to move. They built the Grand Trunk line after the model of one of their own great thoroughfares, ignoring the fact that on some portions of it there would not be ten inhabitants to the square mile. The same mistake, we fear, has been committed in managing both that road and its principal leased line. American skill and adaptation to circumstances might readily raise a 2½ per cent. profit to four or even five per cent.

The stockholders in the Atlantic and St. Lawrence may, if they see fit, accept the proposed terms. A major part of the stock has been held in Europe, and the right of the majority to govern will hardly be questioned here. But they may refuse; and in that case how are the Grand Trunk Company to help themselves. Without this connection that property is absolutely worthless six months in the year. It is idle to talk of the projected Intercolonial Railway as an alternative. With the present state of the railroad interests of Canada, England will not invest another pound in her works of internal improvement. The feeling at this moment is rather to get rid of the provinces than to hold on to them, especially if the connection implies further outlays on unprofitable works. Even were it otherwise, the line could not be completed in less than five years. What arrangement could be made to open a new outlet during the ensuing winter? The concern would go to ruin, and a large portion of it would not be operated at all.

We have made these observations, not to throw any obstacle in the way of a settlement by any fair compromise, but to present considerations that appear to have been overlooked by the committee. It would afford us much pleasure to see the Grand Trunk and all the other Canadian roads taken out of the mire into which they are now sunk.

The Eighth Census.

The following is a continuation of the preliminary chapters of the Report of Jos. C. G. Kennedy, Esq., the publication of which was commenced in our previous issue:

PETROLEUM.

An important development of the natural resources of the country and a valuable addition to its exports have been made by the discovery, within two or three years, that certain indications, known to the aboriginal and early European inhabitants of the western country, of natural reservoirs of inflammable oil existing upon the head waters of the Alleghany river in New York and Pennsylvania, were but the clue to apparently inexhaustible supplies of native oil, accessible at no great depth throughout an extended belt of country, embracing the bituminous coal measures of several States.

Petroleum, rock or mineral oil, a natural product of the decomposition of organic matter, emitted from the soil in various formations, particularly those of rock salt, was known and employed to some extent by the ancients, having been mentioned by the father of history twenty-three hundred years ago, and by Greek and Roman writers of later date. In its more fluid form, as found on the shores of the Caspian Sea, near the Irawaddy of Burmah, in Italy, and some parts of our country, it has borne the name of naphtha, while the more solid elements of the same substance predominated in the articles known as asphaltum and bitumen, found abundantly in the Great Pitch Lake of the Island of Trinidad, near the Dead Sea in Judea, and elsewhere. Petroleum is nearly identical in properties with the artificial oils which have been long derived from the destructive distillation of different minerals, as cannel coal and brown coal, or lignite, bituminous shales, sands, clays, peat, etc., which have been the subject of numerous patents in Europe and America, and within the last eight years have been manufactured to a considerable extent in the United States and the neighboring provinces, until the native petroleum springs opened a source of cheaper supply.

As a product of our own country this remarkable substance was brought to the notice of the white population as early as the middle of the last century, by the Seneca Indians, who found it upon Oil creek, a branch of the Alleghany, in Venango county, Pennsylvania, and near the head of the Genesee river, in New York, whence it received the name of "Seneca oil" and "Genesee oil." It was used by the natives in their celigious ceremonies, and as medicament for wounds, etc. For the last named purpose it has been long collected and sold in small quantities at a high price. A perennial flow of oil has been known to exist in Oil creek, above referred to, for a century. For the last forty years the spring has been enclosed in a vat or structure of wood and stones, which was daily skimmed by the proprietor, and made the source of considerable revenue. We have seen extensive diggings in this region, made by the French more than a century since, while that nation held the valley of the Mississippi, which were evidently made to ascertain the basis or source of what, no doubt, impressed the French officers as a most interesting and curious development of the bounty of nature. Petroleum, doubtless, formed an article of considerable traffic between the Indians and traders of that region, as we have seen, in some old account books of the last century, "gallons" and "kegs" of Seneca oil credited to the Indians.

OIL MINES OF PENNSYLVANIA.

Its existence in any vast amount appears to have been unknown until 1845, when a spring was "struck," while boring for salt, near Tarentum, thirty-five miles above Pittsburg, on the Alleghany. Experiments having proved its constituents to be nearly the same as those of the artificial carbon oil, a company was organized in New York to attempt its purification by the same process applied to the latter. But little was effected, however, and in 1857, Messrs. Bowditch & Drake, of New Haven, commenced operations at Titusville on Oil creek, where traces of early explorations were found, and in August, 1859, a fountain was reached by boring, at a depth of seventy-one feet, which yielded four hundred gallons daily. Before the close of the year 1860, the number of wells and borings was estimated to be about two thousand, of which seventy-four of the larger ones were producing daily, by the aid of pumps, an aggregate of 1,165 barrels of crude oil, worth, at twenty cents a gallon, about $10,000. Wells were soon after sunk to the depth of five or six hundred feet, and the flow of petroleum became so profuse that no less than three thousand barrels were obtained in a day from a single well, the less productive ones yielding from fifteen to twenty barrels per diem. In several instances extraordinary means were found necessary to check and control the flow, which is now regulated in such wells, according to the state of the market, by strong tubing and stop cocks. The quantity sent to market by the Sunbury and Erie Railroad from the Pennsylvania oil region, which has thus far been the principal source, increased from 325 barrels in 1859 to 134,927 barrels in 1861. The whole quantity shipped in the last mentioned year was nearly 500,000 barrels. Since August, 1861, the product has rapidly increased. The present capacity of the wells is estimated at 250,000 to 300,000 barrels per week. So important, however, have the operations in this article become, that a railroad, we understand, has been chartered in Pennsylvania exclusively for the transportation of the oil to market. From a recent number of the *Register*, a newspaper published in Titusville, Pennsylvania, we copy the following statement respecting the production of petroleum in that vicinity:—"We learn that the number of wells now flowing is seventy-five; the number of wells that formerly pumped and flowed is sixty-two; the number of wells sunk and commenced is 358; total, 495. The amount of oil shipped is set down at 1,000,000 barrels; amount on hand to date, 92,450 barrels; present amount of daily flow, 5,717 barrels. The average value of the oil, at $1 per barrel, is $1,092,000; average cost of wells, at $1 000 each, $495,000; machinery, buildings, etc., from $500 to $700 each, $500,000. The total number of refiners is twenty-five. The detailed report of the condition of the wells shows that production is on the increase. Holders are firm at fifty cents per barrel at the wells, and don't seem to care about selling any great amount at that price." With increased facilities for getting it to the seaboard at a cheap rate for transportation, the operations will doubtless become much more extended than at present.

The exportation of crude and refined petroleum from the principal Atlantic cities to Europe, South America, and the West Indies, has already become considerable, the larger proportion being shipped to England. Much of it is sent to Europe in this crude state, in which form it is said to be preferred for the sake of the collateral products obtained in the process of refining. It is probable, however, that the highly inflammable character of the unrefined article, owing to the presence of certain gaseous or exceedingly volatile compounds may prove an objection to its shipment in that state. The quantity exported from the cities of Philadelphia, New York, Boston, Baltimore and San Francisco, from the 1st of January to the 1st of April, 1862, amounted to 2,342,042 gallons, valued at $633,949. The receipts at Cincinnati, during the same period, of carbon and petroleum oils, were 519,960 gallons, or 13,000 barrels, nearly one-half of which was petroleum oil. The exports from the three cities first mentioned, from the 1st of January to the 16th of May of the present year, were 3,651,130 gallons, worth $889,886, and the shipments in the last week of that period from the same places were 255,600 gallons, valued at $42,160.

A large reduction has taken place in the price since the commencement of the trade, and particularly during the last few months. The price of crude petroleum in Philadelphia on the 4th of January, 1862, was from 22½ to 23 cents a gallon, and of refined oil 37½ to 45 cents. On the 29th of March the prices had declined at the same place to 10 and 12 cents for crude, and 25 to 32 cents for refined oil, while the most recent price current lists place it at 9 and 19 cents. Although the capacity of the existing wells already exceeds a profitable demand, there appears to be no assignable limit to the flow, or to the localities which may be found to yield it, whenever an augmented demand shall warrant farther search or increased production. The bituminous coal areas of the United States are estimated to cover upward of 62,000 square miles in eight of the Middle, Southern and Western States. Springs and reservoirs of petroleum have been discovered throughout nearly their whole extent. They have also been noticed by Captain Stansbury on a branch of the Yellow creek, eighty-three miles from Salt Lake City, in Utah, on the route to Fort Leavenworth. They exist also in some of the neighboring British provinces. It is probable that the saliferous strata of our western country may be generally found to yield this interesting mineral product.

The importance of this article is not limited to its value as an item in the export trade of our cities. Attention appears to have been first directed to it on account of the demand for a safe and cheap material for illumination, in place of the dangerous compounds of turpentine and other explosive hydro-carbons, as well as for lubricating purposes, in which it has proved to be a valuable substitute for animal oils. There is no doubt that the various other uses of crude petroleum, or its constituents will render it a valuable acquisition to the arts. The business of refining the raw product, in order to remove from it all corrosive and volatile elements, already employs a number of establishments, and will become one of some magnitude. Practical chemistry is daily adding to the number and variety of uses which the substance eliminated in the process of rectification may be made to subserve in the arts.

Although the extraction of oil, pitch and tar from bituminous shale was the subject of a patent in England as early as 1695, and the manufacture and purification of oil, gas and other hydrocarbons from coal received several improvements by the Earl of Dundonald and others at a later period, the patent of Mr. Young, of Manchester, secured in England in 1850, and in the United States in 1852, "for the obtaining of paraffine oil, or an oil containing paraffine, and paraffine from bituminous coal," appears to have given the first great impulse to the manufacturing of these oils as a source of artificial light. The patent, which covered a very successful process has given rise to suits of law, one of which was recently brought, without success, to restrain the sale in England of petroleum oils, by the name of American paraffine oil, as damaging to the sale of his "paraffine oil," on account of the highly inflammable character of the former.

ILLUMINATING OIL FROM COAL

appears to have been made as early as 1846 by Dr. Gesner, of Nova Scotia, and in 1854 the Kerosene Oil Company, on Long Island, commenced the first manufacture of carbo-hydrogen oil under patents secured by Dr. Gesner, using cannel coal from England, New York, and other parts of the United States. The Breckinridge coal oil works on the Ohio, at Cloverport, Kentucky, were commenced in 1856, and were soon followed by others, to the number of twenty-five in operation in 1860 in Ohio alone, with a working capacity of three hundred gallons of light oil each, per diem. There were then about fifty-six factories in the United

States, exclusive of some fifteen engaged altogether on petroleum, and several small private coal oil works. The capital expended in coal oil works and cannel coal mines was estimated at nearly four million dollars. The manufacture of coal oil lamps, resulting from the use of the oil, formed the principal business of sixteen companies, who employed 2,150 men and 400 women and boys, and work for 125 looms in making the lamp wick.

The cannel coal employed by them, as well as wood, peat and other substances of vegetable origin, when subjected to destructive distillation in close vessels, at a heat below that at which they yield gas in abundance, affords a large quantity of a light supernatural oil, amounting to about one fifth of the product, which having been purified and redistilled, yields a very volatile and naphthalous fluid, of light specific gravity, containing some paraffine oil, and highly inflammable owing to the presence of benzoin or benzole. There is also obtained a heavier oil, which is a safe and valuable burning oil, a denser lubricating oil, and solid paraffine, a peculiar white crystalline substance, beautifully adapted for candles, and now manufactured to some extent for that and other practical uses. The petroleum of our country has been found to be a more economical source for these several compounds of carbon and hydrogen, and enables the manufacturer to dispense with the first stage of the process referred to. The cheapness of crude petroleum, and the simple and comparatively unexpensive process by which a safe and economical illuminating oil may be obtained, give an unusual interest to this subject, as affording the means of preventing the great loss of life shown by the recent census to result from the dangerous compounds so extensively used for that purpose. Although the petroleum oils, when imperfectly rectified, so that all the benzole has not been expelled, are exceedingly explosive, owing to the heat generated by the combination of the solid paraffine readily vaporizing igniting the more ethereal portion, it may with great facility be freed from all volatile substances, and a very simple and practical test enables the purchaser to ascertain its fitness for use. The precautions required in the treatment of petroleum, as well as the expense of thoroughly purifying it, being somewhat greater than with coal oils, many are tempted to neglect it, or even to add a portion of the lighter and cheaper oil to make the heavy oil burn more readily.

All these oils possess an advantage over other kinds in the fact that when once properly deodorized they do not become rancid or ferment by keeping, but rather lose by age any odor they may have retained.

Of eight several products obtained from petroleum by chemical analysis, two or three only were solidified by cold of fifteen degrees below zero, the first three or four remaining perfectly fluid, and none possessed corrosive qualities, showing their fitness as lubricators. Experiments have shown that crude petroleum is admirably adapted to the manufacture of gas, and have led to the expectation that its use will greatly reduce the cost of its manufacture, if it does not entirely supersede the use of coal for that purpose. The "carboration of gas," by attaching to the gas burner a reservoir of oil, through which the gas is made to pass before combustion, has been found greatly to increase the economy and illuminating power of coal gas.

The various collateral and residuary products of the distillation, which have been generally wasted heretofore, will all doubtless be utilized as the progress in analytical and technical chemistry throws more light upon their nature and relations. Several of them are already employed in Europe, if not in this country, in the manufacture of some of the new and beautiful dyes which practical science has recently introduced in the arts. Benzine, which it is the object of the rectifier to eliminate, is used to some extent, as a flavoring material, though some recent facts make it doubtful if it is wholly innocious to the health.

The acids, caustic alkalies, and other materials used in the purification of the crude qualities of petroleum may all be restored to use or employed as fertilizers, and the dense, pitchy liquids obtained in the manufacture are available in the composition of water-proof cements, roofing, varnish and fuel. The absence of fatty acids may possibly prevent the saponification of these oils with alkalies for the manufacture of soap, but the more extended use of petroleum for the purposes we have named, which will be effected by time and improved manipulations of the article will suffice to render it a most valuable acquisition to the raw materials and manufactures of the country.

Baltimore and Ohio Railroad.

It will be remembered that when this road was seized and interrupted by the Confederates in June, 1861, they destroyed nearly twenty bridges in all, between Harper's Ferry an Piedmont. Since that period the railroad company has been actively engaged in preparing new iron bridges, of a permanent and beautiful character, with which to replace the temporary but substantial timber structures that are now being used in that portion of the road. One of these bridges, at a point where the double track is in use over the Cherry Run, twelve miles west of Martinsburgh, has just been put in position. This will be at once followed by several others of the smaller bridges. The extensive bridge over the Potomac River at Harper's Ferry, about 1,000 feet long, will soon be put in its place. The masons have been at work for several weeks past in raising and renewing portions of the piers and abutments, in order to receive this superior viaduct. A number of workmen are still engaged at the Mount Clare shops, Baltimore, in the extensive iron work belonging to this and other bridges.

In the meantime the Railroad Company has been also occupied in rebuilding its second track, which, at the beginning of the war, extended for about 25 miles west of Harper's Ferry. The upper section of this, from Martinsburgh to Cherry Run, was put in use on Monday last, and it is now being rapidly rebuilt eastward, for which large quantities of iron and cross-ties have been brought from Wheeling and the mountains along the road.

Quite an important improvement has been made by the railroad company within the last few days at the Relay, or Washington Junction, by which engines and trains are now running directly between Washington and the West, without change of any kind at the Relay. This has been effected by building a new track, with a beautiful curve, on the northern end of the large stone viaduct over the Patapsco, beyond the Relay House. This improvement was availed of for the first time on Tuesday last, when large trains of live stock and supplies for the Government were passed directly to Washington from the West.

The large depots lately existing at New Creek, Martinsburgh, and other points along the road, for Government supplies, have all been removed, and their valuable accumulations sent off in large trains to distant points where the army necessities have required. The road is thus entirely freed from the serious temptations which these extensive places had offered to an enterprising enemy, and is doubtless rendered far less liable to possible attempts of the Confederates to interfere with it again. The business of the line, in freight and passengers, continues very large. Numerous trains are constantly in motion at all points, taxing the large resources of the company in accommodating the varied and extensive trade offering. This the railroad is better able to accomplish, in view of the fact that it is constantly adding to its motive and carrying power. A large number of the locomotives that were destroyed by the Confederates at Martinsburgh have been thoroughly repaired, and their use again availed of in the general business of the road. Upward of two hundred wooden and iron house cars have been recently built by the company. More than half the number of freight and coal cars destroyed about the same time as the locomotives, are again in running order, whilst the remainder are being urged forward with all possible haste. We are glad to notice, also, the addition and improvement the company is making to its passenger-car equipment, having built a number of the most approved cars of this class now in use—a step rendered necessary by the large travel now passing over the road.—*Times, July* 22.

Erie Railway Steamboat Company.

A new line of propellers in connection with the Erie Railway has been established on Lake Erie. It is called the "Erie Railway Steamboat Company," and is composed of nine new propellers, each of 600 tuns burden, with two or three more building. It runs in connection with the Erie Railway between the ports of Dunkirk, Cleveland, Sandusky and Toledo, and is now doing sufficient business to give employment to one hundred cars per day on the Erie Railway. The boats are fitted up with handsome cabins, and can accommodate from seventy-five to one hundred passengers in first-rate style. The officers of the company are Daniel Drew of New York, President; S. D. Caldwell of Dunkirk, Vice President; D. Drew Chamberlin of New York, Secretary; and Kenyon Cox of New York, Treasurer. The Toledo *Commercial* thus describes one of these boats:

THE PROPELLER PASSAIC.—Perfection is only relative. The *ne plus ultra* of to day may be left so far behind as to fade in the dim distance tomorrow. The little coughing propellers which we saw tumbling about the chopping waves of Lake Ontario fifteen years ago, were thought to be great things in their way, but they would not class as A1, hardly as B2, now. A few weeks ago the Canisteo put in her claims as the finest craft of her kind on Lake Erie, and the claim was readily yielded. Yesterday her consort, the Passaic, made her appearance, and though built at the same yard for the same owners, it cannot be denied that in a few points she excels even that excellent vessel. More perfect elegance of model and completeness of finish were the points of improvement which we noticed particularly.

We paid her a visit and rambled over her 200 feet (almost) of length, admiring and enjoying what we saw. We peeped into the hold, where the massive timbers and heavy iron braces bore witness to her great strength, and into which the great spout was pouring her first cargo of corn, down into the furnace room where the sooty stoker feeds the hungry demon; into the engine room, where the strong giant that moves and preserves the noble craft was dozing at his post, and the alert engineer was currying and stroking him down, preparatory to commencing his hard work; into the cabin, inferior only in size to the best steamboats; into the kitchen, where cooking range, tinware, and crockery were all gleaming with newness and in perfect order; into the captain's room, where that worthy was taking a siesta preparatory to his night's labor of piloting his charge through the channel of Maumee Bay and down Lake Erie, everywhere observing the perfection of details, and the substantial excellance and fitness of each part for its destined office.

The Passaic was built by Bidwell & Mason of Buffalo for the Erie Railway line, between Toledo and Dunkirk. She is commanded by Capt. John Kirby, of whom it is enough to say that he formerly commanded the New York, and has for a long time been one of the favorite officers of the line. She is 190 feet long, 30 feet 3 inches beam, has 12 feet depth of hold, and measures 656 tons burden. She is well fitted to carry passengers with comfort, and freight with speed and safety.

The traffic of the Great Western Railway o Canada for the week ending July 25, 1862, was as follows:

Passengers	$18,117 81
Freight and live stock	20,918 15
Mails and sundries	1,291 95
	$40,889 91
Corresponding week of last year	29,840 97

Zinc, Spelter and Teutenegue, unmanufactured in Blocks or Pigs, per 100 lbs.	1 25	..
In Sheets, per lb.	0 03	..

EXEMPTED ARTICLES.

Acids of every description, used for chemical and manufacturing purposes, not otherwise provided for.

Alcornoque. Ambergis.

Annatto, roncou or Orleans.

Animal carbon, (bone black.)

Animals, living, of all kind.

Articles in a crude state, used in dying or tanning, not otherwise provided for.

Bells, old, and bell metal.

Berries, Nuts, Flowers, Plants and Vegetables, used exclusively in dying or in composing dyes; but no articles shall be classed as such that has undergone any manufacture.

Birds, singing or other, and land and water fowls.

Bismuth. Bolting Cloths.

Bones, burnt, and bone dust.

Books, Maps and Charts, imported by authority of the Joint Library Committee of Congress for the use of the Library of Congress: *Provided*, That, if, in any case, a contract shall have been made with any bookseller, importer, or other person aforesaid, shall have paid the duty, or included the duty in said contract, in such case the duty shall be remitted.

Books, Maps, Charts, Matematical, Nautical Instruments, Philosophical Apparatus, and all other articles whatever, imported for the use of the United States.

Books, Maps, and Charts, Philosophical Apparatus, Instruments, Statues, Statuary, Busts, and Casts of Marble Bronze, Alabaster or Plaster of Paris; Paintings and Drawings, Etchings, specimens of Sculpture, Cabinets of Coins, Medals, Regalia, Gems and all collections of antiquities: *Provided*, The same be specially imported, in good faith, for the use of any society incorporated or established for philosophical, literary or religious purposes, or for the encouragement of the fine arts, or for the use, or by the order, of any college, academy, school, or seminary of learning in the United States.

Brazil Wood, Brazilleto and all other dyewoods in sticks.

Breccia, in blocks or slabs. Brime.

Bullion, gold and silver.

Burrstones, wrought or unwrought, but unmanufactured, and not bound up into millstones.

Cabinets of Coins, Medals and other collections of antiquities.

Cadmium. Calamine.

Cochineal. Cocoa Nuts.

Coins, gold, silver and copper.

Copper, when imported for the United States mint.

Cork-tree Bark, unmanufactured.

Divi Divi.

Felt, adhesive, for sheathing vessels.

Fish, fresh caught, for daily consumption.

Glass, when old, not in pieces which can be cut for use, and fit only to be remanufactured.

Goods, wares and merchandise, the growth, production, or manufacture of the United States exported to a foreign country and brought back to the United States in the same condition as when exported, upon which no drawbacks or bounty has been allowed: *Provided*, That all regulations to ascertain the identity thereof, prescribed by existing laws, or which may be prescribed by the Secretary of the Treasury, shall be complied with.

Guano.

Hair of all kinds, uncleaned and unmanufactured, and all long horsehair, used for weaving, cleaned or uncleaned, drawn or undrawn.

Household effects, old and in use of persons or families from foreign countries, if used abroad by them, and not intended for any other person or persons, or for sale.

Ice, Indigo, Irridium, Irris, Orris Root.

Junk, old, and Oakum.

Kelp.

Lac Dye, Lac Spirits, Lac Sulphur.

Leeches.

Madder, ground or prepared, and Madder Root.

Machinery suitable for the manufacture of flax and linen goods only, and imported for that purpose solely, but not including that which may be used for any other manufactures.

Manuscripts, Marine Coral, unmanufactured.

Medals of gold, silver or copper.

Models of Inventions, and other improvements in the arts: *Provided*, That no article or articles shall be deemed a model or improvement which can be fitted for use.

Munjeet, or Indian Madder.

Natron, Nutgalls, Nux Vomica.

Oils, Spermaceti, Whale and other Fish of American Fisheries, and all other articles the produce of such fisheries.

Ores of gold and silver.

Orpiment, or Sulphuret of Arsenic.

Paintings and Statuary, the production of American artists residing abroad: *Provided*, The fact as aforesaid shall be certified by the artist or by a Consul of the United States.

Palm Leaf manufactured.

Pearl, Mother of.

Personal and household effects, not merchandise, of citizens of the United States dying abroad.

Pine Apples.

Plaster of Paris, or Sulphate of Lime, unground.

Platina, unmanufactured; Platina Vases, or retorts.

Polishing Stones, Pumice and Pumice Stones.

Rattans and Reeds, unmanufactured.

Rottenstone.

Sandalwood, Seedlac.

Shingle Bolts and Stave Bolts.

Silk, raw or as reeled from the Cocoon, not being doubled, twisted or advanced in manufacture any way, and Silk Cocoons and Silk Waste.

Specimens of Natural History, Mineralogy and Botany.

Substances expressly used for Manure.

Tortoise and other shell, unmanufactured.

Turmeric, Types, old, and fit only to be remanufactured.

Wearing apparel in actual use, and other personal effects, (not merchandise,) professional books, implements, instruments and tools of trade, occupation or employment of persons arriving in the United States: *Provided*, That this exemption shall not be construed to include macinery, or other articles imported for use in a manufacturing establishment, or for sale.

Wold, Woad or Pastel.

Woods, namely: Cedar, Lignum-Vitæ, Lancewood, Ebony, Box, Granadilla, Mahogany, Rosewood, Satinwood, and all cabinet woods, unmanufactured.

UNENUMERATED ARTICLES.

All raw or unmanufactured articles not herein enumerated or provided for shall pay a duty of 10 per cent. *ad valorem*.

All articles manufactured in whole or in part, not herein enumerated or provided for, shall pay a duty of 20 per cent. *ad valorem*.

ADDITIONAL DUTY ON GOODS FROM BEYOND THE CAPE OF GOOD HOPE.

There shall be levied, collected and paid on all goods, wares and merchandise of the growth or produce of countries beyond the Cape of Good Hope, when imported from places this side of the Cape of Good Hope, a duty of 10 per centum ad valorem, and in addition to the duties imposed on any such articles when imported directly from the place of their growth or production.

*** In the act of Aug. 5, 1861, it states, "That all articles, goods, wares and merchandise, imported from beyond the Cape of Good Hope in foreign vessels, not entitled by reciprocal treaties to be exempt from discriminating duties, tonnage and other charges, and all other articles, goods, wares and merchandise not imported direct from the place of their growth or production, or in foreign vessels entitled by reciprocal treaties to be exempt from discriminating duties, tonnage and other charges, shall be subject to pay, in addition to the duties imposed by this act, ten per centum ad valorem; *Provided*, That this rule shall not apply to goods, wares and merchandise imported from beyond the Cape of Good Hope in American vessels.

DUTIES ON TONNAGE OF VESSELS.

Upon all ships, vessels or steamers which, after the 31st day of December, 1862, shall be entered at any Custom house in the United States from any foreign port or place, or from any port or place in the United States, whether ships or vessels of the United States, or belonging wholly or in part to subjects of foreign Powers, there shall be paid a tax or tonnage duty of 10 cents per ton of the measurement of said vessel, in addition to any tonnage duty now imposed by law: *Provided*, That the said tax or tonnage duty shall not be collected more than once in each year on any ship, vessel or steamer having a license to trade between different districts of the United States, or to carry on the bank, whale, or other fisheries, while employed therein, or on any ship, vessel or steamer to or from any port or place in Mexico, the British Provinces of North America, or any of the West India Islands: *Provided*, also, that nothing in this Act contained shall be deemed in any wise to impair any rights and privileges which have been or may be acquired by any foreign nation under the laws and treaties of the United States relative to the duty on tonnage of vessels.

DRAWBACK.

There will be allowed on all articles wholly manufactured of materials imported, on which duties have been paid, when exported, a drawback equal to the amount of the duty paid on such materials, less ten per cent.

Postage Stamps.

The United States postage stamps, which are now coming so freely into circulation, besides having the amount of their value in figures upon the upper corners, may be readily recognized by their colors and vignettes, which are as follows:—

Amount.	Vignette.	Color.
1 cent	Franklin	Blue.
3 cent	Washington	Pink.
5 cent	Jefferson	Chocolate.
10 cent	Washington	Green.
12 cent	Washington	Black.
24 cent	Washington	Lilac.
30 cent	Franklin	Yellow.
90 cent	Washington	Blue.

CUMBERLAND COAL.
THE BORDEN MINING COMPANY
ARE now prepared to fill orders and to make contracts for the season of 1862, for **CUMBERLAND COAL,** DELIVERABLE ON BOARD VESSEL AT **Baltimore, Md., Alexandria, Va.,** or **Georgetown, D. C.** Purchasers may rely upon the Coal proving equal in quality to that heretofore furnished.
The Company also have the pleasure of announcing that they have completed, after two years' labor, their shaft and machinery upon their new property in the VALLEY OF GEORGE'S CREEK, and are lifting from the very heart of the Coal Basin a superior and perfect article of **BITUMINOUS COAL,** remarkably free from impurities of every description, and possessing qualities peculiarly adapting it to Locomotive use, and to generating steam under all circumstances. This Coal will be known in market as **"BORDEN'S PIT COAL."**
Our Railroad friends, and others requiring a superior Coal, will find it to their interest to give this a trial before contracting elsewhere.
For prices and other information apply to
WILLIAM BORDEN.

THE GREAT FIRE IN TROY.
Unparalleled Triumph
OF
LILLIE'S SAFES!

The following certificates explain themselves:

TROY CITY BANK, May 21, 1862.

LEWIS LILLIE, Esq.—Dear Sir: I am sure it will give you as much pleasure to know as it does me to say, that in the recent fire of the 10th inst., which desolated our city and destroyed our Banking-house, the contents of our Bank vault, though the building itself was a heap of ruins, remained entirely unharmed. This result we attribute entirely to the fact that our old Wrought Iron Doors were, about two years since, exchanged for a set of your celebrated Chilled and Wrought Iron Doors and Frames. With the old doors, not a book or paper in the Vault could have been saved; as it is, nothing in it was even damaged, though exposed to the most intense heat.

Yours, respectfully, S. K. STOW, Cashier.

TROY, N. Y., May 14, 1862.

The undersigned, using **Lillie's Chilled and Wrought Iron Fire and Burglar Proof Safes,** at the time of the late disastrous fire in this city, would state that our safes were subjected to a severe test by fire, the heat varying in intensity, according to the locality and surroundings. The time they were exposed to the fiery ordeal, unprotected by water, varied from 24 to 72 hours. We would say that our money, papers, books, etc. were well preserved, and the Safes are suitable for further use. By comparison with Safes of other manufacture, equally exposed, we have no hesitancy in recommending Safes of Lillie's manufacture to the public on their demonstrated merit as entitled to unparalleled confidence as fire-proofs.

James Kenyon,	S. Bachelder,
S. O. Gleason,	Gates H. Barnard,
Percy & King,	W. D. Haight,
McCoy & Beadle,	Denio & Frejot,
Coon & Van Valkenburgh,	Walsh, Petit & Anthony,
S. S. McClure,	D. H. Snyder,
Ross & Smith, }	Jonathan Seaman.
Robert Green, }	

Not dug out—nothing in them.

TROY, May 19, 1862.

The undersigned had one of **Lillie's Wrought and Chilled Iron Safes,** which went through the fire of the 10th of May. The Safe was exposed to a severe fire for over 24 hours. In falling it turned on its face, and when turned up to open the doors was red-hot. The back of the lower part of the Safe (behind the books) was filled with pennies, which, in falling over, pressed against the books, and brought them directly in contact with the doors. The wrappers on the pennies were mostly good. The books were unfit for further use, but the writing on them was partially legible and could be copied.

DUSENBURY & ANTHONY.

TROY, May 19, 1862.

This is to certify that we had in our store, in this city, when it burned, one of **Lillie's Small Safes,** which was in the fire, without water on the building or Safe. Most of the valuables were removed before the fire, and therefore we were not in haste to get the Safe out of the burning ruins. Some of the papers left in the Safe were legible when taken out, but most of them were charred.

I. M. SINGER & CO.,
Per G. W. BABCOCK, Agent.

This is to certify that the undersigned had one of LILLIE'S Patent Chilled Iron Safes in their store, which was burned during the late severe fire in this city, and we are happy to state, the Safe preserved all its contents in first-rate condition. All the papers were legible, and the books will do for further use, without even rebinding.

GRANT, NUTTING & CO.

The foregoing comprises all the Safes of my manufacture that were in the fire, and below will be found certificates from all the owners of Safes manufactured several years since, by World's Safe Company, who used my Patent Chilled Iron Shell, but not my Fire-Proof Cement.

WORLD'S SAFE COMPANY'S SAFES.

TROY, May 19, 1862.

The undersigned, having Safes manufactured by the late World's Safe Company, and which were subjected to the great fire of the 10th inst., in this city, would state that our Safes were exposed to a severe heat, being confined in the burning ruins, unprotected by water, from one to three days. On opening the Safes the contents were mostly legible, and to a far greater extent than could be reasonably expected of any Safe. We concur in the opinion that the Safes manufactured by LEWIS LILLIE, which were subjected to the fire for a longer time and preserved their contents, are superior and powerful protectors against fire, and by this test we are prepared to recommend them as such to public patronage.

Lyman Bennett,	Silliman, Matthews & Co.,
Flood & Dunham,	E. L. Mallory,
John Hutchinson,	E. H. Virgil,
Sup't National Express Co.	

The undersigned, having Safes manufactured by the late World's Safe Company, and which were subjected to the great fire in this city, would state, that on opening our Safes the contents were mostly legible. We concur in the opinion that the Safes manufactured by LEWIS LILLIE, which were subjected to the fire for a longer time and preserved their contents, are superior and powerful protectives against fire, and we are happy to recommend them to public patronage.

W. & L. E. GURLEY,
R. L. & G. DRAKE,
LEONARD SMITH,
H. E. & W. ALENDORPH, Absent.

TROY, May 19, 1862.

To whom it may concern: We would certify that when the recent fire broke out in this city, we took out from our Safe (which was made by World's Safe Company) all our books, papers, etc., and then left it to the flames without shutting the door, and the Safe will do for further use by being repaired, although the book case was destroyed by the door being left open through the fire.

ACKLEY & CO.

TROY, May 19, 1862.

The undersigned, using Safes manufactured by the World's Safe Company, at the time of the late disastrous fire on the 10th instant, in this city, would state that our Safes were filled with fire-brick for the fire-proof, and while several of this class preserved their contents, ours were considerably charred, and only a part legible. In justice to Mr. LEWIS LILLIE, we are pleased to state that Safes of his manufacture proved to be powerful protectors against fire, and have preserved their contents, after having been exposed to the fiery ordeal, unprotected by water, from one to three days.

Stephen Holton,	Luther Greenman,
Bennett, Strickland & Fellows,	E. W. Johnson,
Corloss & House,	J. H. Goodsell.

TROY, N. Y., May 17, 1862.

LEWIS LILLIE—Dear Sir: We were using at the time of the late severe fire of 10th inst., a Safe purchased in 1852 of the late World's Safe Company. The contents were considerably charred, but our Ledger is mostly legible, and we are able to copy it.

The Safe was subjected to a severe heat for over eighteen hours, and we are satisfied that if water had been thrown on the ruins, as is ordinarily the case, the contents would have come out uninjured. You will please repair our Safe, placing in it the improvements embraced in Safes of your manufacture, and oblige

SHELDON & GREENE.

N.B.—The above Safe is believed to have damaged the contents more than any of those named in this circular.

There were only seven Sheet Iron Safes, made by Herring and others, outside of the railroad depot, that were exposed to the fire, four of which were entirely burnt out; the fifth was saved by being early cooled off by water; the remaining two were not severely tested.

LEWIS LILLIE,
H. R. HUBBELL, Agent,

American Railroad Journal.

New York, Saturday, August 16, 1862.

Baltimore and Ohio Railroad--Loyalty of its Management.

The Baltimore and Ohio Railroad has suffered materially in public estimation since the events of April, 1861. It has been freely given out, and too generally believed, that the motive of its unwillingness to transport troops for the government was disloyalty, not inability to render the service required, or even a judicious care for the interests of its stockholders. In a late number of the Baltimore *American* we find several columns of extracts from the forthcoming report of the Contract Committee, a portion of which will suffice to set this matter at rest. The report sets out by observing:—

A natural consequence of the war was to bring the railroads of the entire loyal sections of the country, and a part of those in sections where loyalty and treason were in conflict, in active requisition. Railroads as a power in war became naturally prominent in diminishing distance and securing celerity. The importance of this mode of transportation was strikingly illustrated, and probably the safety of the Capital was attributable to its efficiency, and thus the extraordinary powers and prerogatives which have been conferred on many of the railroad corporations of the various States have been unexpectedly available for the safety of the country. And however effective this new agent of war might be, it was still an agent which the Government had fostered, and might rightfully employ on reasonable terms in its own preservation.

On the subject immediately before us a great deal of testimony was taken. The committee deem it proper to say that "the pretence that the disloyalty of the gentlemen controlling the Baltimore and Ohio Railroad furnished a sufficient reason for indifference to the safety of the said road by the government, is not sustained by the evidence. It will be seen that this road was prompt in expressing its willingness to transport the troops and supplies of the government until the very moment when the armed insurgents were prepared to obstruct the road if used by the government."

It is not our province to enter into the charges of unfair influences having been exerted for the purpose of directing business from the Baltimore and Ohio to a rival line. *That* belongs rather to the politician than the organ of the Railroad interest. Our duty is to clear the managers of the Baltimore and Ohio of unjust censures which have been very freely heaped upon them, for the obvious reason that the affair has been but partially known to the public. Mr. Wm. Prescott Smith, for nine years Master of Transportation on the B. & O., testified that up to the middle of April "*there was very little transportation done over the main road for the government*, in view of the fact that the last troops, prior to the mob in Baltimore and the active commencement of the war, were coming from the West to Washington by the Pittsburg and Harrisburg route; and we were told that Sherman's Battery and Morris' battalion or company had been diverted from our road, which we had expected them to take, from an apprehension that their coming would create some excitement in the then state of affairs. They arrived at Harrisburg about the 19th of April, after the President's Proclamation."

It thus appears that no troops had been carried by that route for some time before. Mr. Smith, indeed, adds that the transportation of them had been "solicited" by the company for several months, without success. The late Secretary of War was not indifferent to considerations of danger and expediency, when he ordered the troops coming from the West to Washington to be brought by a less exposed route than the Baltimore and Ohio main line.

It appears that parties claiming to be the agents of rival lines, had circulated reports over the West to the effect that the Baltimore and Ohio Company were unwilling to transport troops or munitions of war for the government. This brought forth the following telegraphic correspondence which will speak for itself:—

ZANESVILLE, April 16, 1861.

"It is reported here that your Company will not transport Government troops through Virginia to Washington city, if any are raised in the West, am I authorized to contradict it?

"H. J. JEWETT,

[President Central Ohio Railroad, between Bell Air, Ohio, and Columbus.]

"J. W. GARRETT, Baltimore."

"BALTIMORE, April 16, 1861.

"You *are* authorized to contradict the statement. Our Company is transporting Government troops to Washington. Our entire line is free from excitement or difficulty, and all descriptions of business are being transacted with usual regularity and dispatch. Anticipating the misrepresentations of rival lines, I forwarded to you yesterday a correspondence on this subject, which I hope you have received. You are further authorized to give all shippers the guarantee of this Company for any damage in transportation upon its road which may arise from political or military actions.

"J. W. GARRETT, President.

"H. J. JEWETT, Zanesville, Ohio."

"BALTIMORE AND OHIO RAILROAD,

"President's Office, Baltimore, April 16, 1861.

"I send you Jewett's despatch and my reply. Send copies of both to Sullivan, and authorize him, until further orders, to agree for transportation at regular rates for troops, &c., for Washington.

"J. W. GARRETT, President."

This is the tenor of a large number. Even as late as the 17th of April arrangements were made to send trains of extra passenger cars from Baltimore to Benwood and Parkersburg for the purpose of bringing forward the first detachment of the Ohio troops. But after the issue of the President's Proclamation the numbers who required transportation between Baltimore and Washington were such that no accommodations could be furnished them. The largest number ever before carried over the Washington Branch in one day was a single regiment. It was on this occasion that the following despatch was sent to Gov. Dennison

of Ohio, which was made the foundation of a report that the company refused *in toto* to carry United States troops:—

"BALTIMORE, April 17, 1861.

"Late this afternoon we are called upon for transportation of twenty-five hundred troops to Washington to-morrow, and find, therefore, that all our cars, except for regular passengers on the main stem, will be required.

"J. W. GARRETT, President.

"GOVERNOR DENNISON, Columbus, Ohio."

The same day the following despatch was sent to the officers of the connecting railroads in Ohio:

"BALTIMORE, April, 17, 1861.

"We find that we will be unable, after all, to bring troops from the West. Had arranged to send large trains—empty passenger cars—both to Benwood and Parkersburg for them, since receiving your advices; but Government has just unexpectedly notified us of nearly 3 000 men, with large stores, &c., from Philadelphia and Harrisburg to-morrow, to be followed by great numbers daily for some time to come, over our Washington Branch. Those numbers are so unprecedented, that they will exhaust our equipment in passenger cars, outside of our usual main stem trains. We had believed until to-night that the Northern troops would go to Washington by sea and Potomac river. "W. P. SMITH."

Gov. Dennison, in a letter to the President of the road observes: "The conduct of yourself and company in all matters relating to the transportation of supplies for the use of the Government, as well as of the troops in Western Virginia has been such as to entitle you and those you represent, to the full confidence of the government, both as regards loyalty and patriotism."

We should hardly have felt justified in going at such length into this question but for the fact that a general prejudice exists detrimental to the management of the Baltimore and Ohio road. This originated doubtless in a petty strife for business among noisy agents; and was then caught up by the press in its almost indiscriminate abuse of public men and public measures. That powerful instrument owes it to a company who have suffered so severely to set them right before a reading public.

Boston, Concord and Montreal Railroad.

The receipts and expenditures of the years ending March 31, 1860, 1861 and 1862, have been as follows:

RECEIPTS.	1860.	1861.	1862.
From passengers	$74,648 78	$79,865 30	$67,538 81
" freights	163,959 07	159,668 90	121,569 90

Cash on hand	$10,929 53	$8,672 22	$4,154 80

The foregoing statement shows a decrease in the gross receipts of the road during the past, in comparison with those of the previous year, of $49,365 79; the expenses have however been reduced $20.405 25—leaving the net earnings only $28.960 54 less.

The following statement will show the financial condition of the company on the 31st of March, 1860, 1861, and 1862:

	1860.	1861.	1862.
Construction	$2,650,000 00	$2,850,000 00	$2,850,000 00

Profit and loss	40,537 16	67,722 24	77,773 29
	$2,950,117 25	$2,964,267 13	$2,958,256 18

The only liability of the company, besides its bonds, is the balance due to Gilmore & Clapp, now amounting to $11,200 40, and the interest on the whole amount of the claim. All the notes given by the company in settlement of the floating debt, and all other claims known to the directors have been paid. The annual payments of $12,500 to the sinking fund has been regularly made which now amounts to $64,000. The fund, with the accumulated interest exceeds $82,000.

The extension for five years of the bonds which became due in 1860, has been effected, with the exception of a small amount, upon which the interest is regularly paid. The reduction of $10,000 of these bonds annually, as per vote of the directors, will be duly made.

The roadway and rolling stock are kept in thorough repair, and the whole equipment of the road is in as good an average condition as at any previous time.

The number of passengers carried in 1859-'60, was 72,832; in 1860-'61, 83,172; in 1861-'62, 68,449. Tons of freight carried in 1859 '60, 44,983; in 1860-'61, 44,582; in 1861-'62, 34,128.

This company was chartered on the 27th of December, 1844. Construction was commenced in 1846. The different sections of the road were opened as follows: from Concord to Sanbornton, 18 miles, in May, 1848; to Lake Village, 11 miles, in October, 1848; to Meredith Bridge, 8 miles, in March, 1849; to Plymouth, 14 miles, in December, 1849; to Warran, 20 miles in February, 1851; and to Wells River, Vt., 22½ miles, in May, 1853—the whole length of the line from Concord to Wells River being 93.54 miles.

On the 1st of February, 1859, the company took a lease of the White Mountains railroad, from Wells River to Littleton, 20.85 miles in length, for a period of five years, at an annual rental of $10,000, payable monthly, undertaking to operate and maintain the road during that time.

The following statement will show the length, earnings, expenses, etc., of the road yearly:

Year.	Miles of road.	Gross earnings.	Operating expenses.	Net earnings.

President—JOHN E. LYON, Boston, Mass.

Superintendent—J. A. DODGE, Plymouth, N. H.

Treas'r—THEODORE STANWOOD, Boston, Mass.

Railroad Companies not Liable for Goods taken from them by due Process of Law.

FREIGHT TO BE TRANSPORTED; WHEN TAKEN FROM THE POSSESSION OF THE COMPANY BY DUE PROCESS OF LAW, THE COMPANY MAY MAKE THIS DEFENCE. THE RULE AS TO BAILEES IN GENERAL APPLY TO COMMON CARRIERS.

The case of Bliven *et al. vs.* the Hudson River Railroad Company was recently decided by a General Term of the New York Supreme Court; and it holds that if goods are taken from a bailee by the authority of the law, exercised through regular and valid proceedings, it will be a defence to an action by the bailor, against him; and that this general rule as to bailees applies also to the case of common carriers, or railroad companies.

The action was brought against the defendants to recover the value of goods delivered to them to be transported from Sing Sing to New York, and alleged to have been lost through their negligence.

It appears that on the 2d of September, 1859, the plaintiffs delivered to the defendants at their station in Sing Sing, twenty-nine cases or boxes of merchandise, containing saw plates and saw handles of the value of $1,338 82, for the purpose of having it transported to New York, under an agreement or contract in writing, a copy of which was set forth in the plaintiff's complaint. The boxes of merchandise, after being received by the defendants were placed in their freight cars, for the purpose of being transported to New York. Before the regular hour for the departure of the train in which the cars containing the merchandise were to go to New York, a complaint was made on oath by one James L. Cheesman to Joakin Urmy, a justice of the peace for the town of Ossining, alleging in substance, that the said property belonged to the Eagle Saw Manufacturing Company, and had been stolen or embezzled by one Charles Bliven. The magistrate thereupon issued a warrant to search for the property and delivered it to a constable of the town of Ossining for service and execution. Under and by virtue of this warrant the constable forcibly opened the cars in which the merchandise was locked and took the same into his possession. By the direction of the Justice the constable took the merchandise to the premises of the Eagle Saw Manufacturing Company in the town of Ossining, and the magistrate

there delivered to Cheesman who claimed at the time to be the Secretary of that company.

The plaintiff claimed a right to the property under the following circumstances: The plaintiffs by an article of agreement made between them and the Eagle Saw Manufacturing Company, were to make advances to the company and sell their manufactured articles upon certain terms provided for in said agreement, and were made sole agents for the sale of the company's goods, and were to have the right to hold all goods of the company in their possession as security for any and all advances they might make to the company. On the 30th June, 1859, the company gave to the plaintiffs a chattel mortgage on "all the engines, shafts, tools, anvils and fixtures, stock manufactured and unmanufactured or in course of manufacture and all other goods and chattels of the company now or hereafter to be at the works in Sing Sing prison," etc., as security for the payment to the plaintiffs, on demand of all advances made or to be made by them to the company, which mortgage was duly filed in the office of the clerk of Ossining. On the 2d of Sept., 1859, E. S. Hawley claiming to be secretary of the company in connection with Bliven, went to the premises of the company, caused the articles of merchandise in question which had been manufactured by said company and which were not in a state of completeness for the market, to be boxed up, and Hawley delivered the same to Bliven for the plaintiffs who caused the same to be placed on the cars of the defendant at Sing Sing station as aforesaid, when and were they were taken from the defendants in the manner already described.

The referee reported in favor of the defendants, dismissing the plaintiff's complaint. The plaintiffs then appealed. The following was rendered at the decision of the case by the General Term of the court.

Emott, J.—It is no doubt true, as a general rale, that a bailee of property cannot set up against his bailor, that a third person has a better title to the property, and compel the latter to litigate the question of ownership. But it is also true that if the goods are taken from the bailee by the authority of the law, exercised through regular and valid proceedings, it will be a defense to an action by the bailor. The bailee must assure himself and show the court, that the proceedings are regular and valid, but he is not bound to litigate for his bailor, or to show that the judgment or decision of the tribunal issuing the process, or seizing the goods, was correct in law or in fact. This is the rule as to bailees in general, and it includes the case of common carriers.

The property which is the subject of the present controversy was delivered to the defendants by the plaintiff Bliven, at Sing Sing, and placed in a car for transportation. Before it had been removed from Sing Sing, a complaint was made to a magistrate by a third person, that the property had been stolen by Bliven. The magistrate issued a search warrant, and a constable, armed with this warrant, took the property from the defendants forcibly, brought it before the magistrate, and he ordered it delivered to Cheesman, the complainant, as the agent of a manufacturing company. This proceeding was within the jurisdiction of the justice; and his proceedings were regular in form, even if they were corrupt, or the result of a fraudulent combination with Cheesman, as is alleged by the plaintiffs. The defendants are not alleged to have been privy to any such scheme, and as long as the regularity and sufficiency of the proceedings of the magistrate cannot be questioned, the defendants will be protected. The possession of the defendants was terminated by the warrant, and as the justice, having jurisdiction of the subject matter of the complaint, delivered the property to Cheesman, if he had no right to make such a delivery, the remedy of the plaintiffs was against the magistrate, or against Cheesman, or to take the property out of the hands of the latter. The invalidity of the magistrate's order did not revest the possession of the goods in the defendants, or renew their liability. The law had, by a valid act of one of its officers, assumed the custody of the property, and put an end to the control and the liability of the defendants; and unless, or until the magistrate remanded the property to them, they could not again become responsible for it. Nor did it affect the question, that the plaintiff Bliven went before the magistrate, and all proceedings against him, which may have involved the proceedings to search for and take the property, were terminated by his discharge, that might have given him a right to take the property, or to sue Cheesman for it. But it did not redeliver it to the defendants, or renew their obligation to transport it to New York. If that were so, the same consequences might follow if Bliven had been arrested, examined, committed, tried, convicted, and then his conviction reversed. Would it be said, if upon his commitment or his conviction the alleged stolen property had been taken from the custody of a carrier, where he had placed it, and delivered to the complainant, that after the conviction had been reversed he could forthwith sue the carrier for a non-delivery of the goods? This point disposes of the case. The judgment should be affirmed.

Grain Crops of California.

The commencement of the harvest and prospect of a good crop, and the healthy condition of the various productive interests of the state have contributed to strengthen the views of dealers in the expectation of an increased consumption of merchandise, and means to pay.

The wheat crop of 1861, is estimated at 3,700,000 sacks. The average price of wheat for the year just closed was $2 04 per 100 lbs., at which price the crop has yielded a value of $7,548,000. Thus it will be seen that, although short of last year's crop in the number of sacks produced, its value has been nearly $1,000,000 in excess.

The barley crop of 1861 is estimated at about 1,200,000 sacks. The average price has been $1 15⅝ per 100 lbs., which gives the value of the crop in round numbers at $1,250,000; about $100,000 below that of last year.

The crop of oats produced in 1861 is estimated at about 250,000 sacks. The average price has been $1 22½ per 100 lbs. Total value in round numbers, $275,240.

RECAPITULATION.

	Sacks.	Value.
Wheat crop	3,700,000	$7,548,000
Barley crop	1,200,000	1,250,000
Oats crop	250,000	275,240
Total value of grain crops of 1861		$9,073,240
Totel value of grain crops of 1860		8,247,840
Excess of value in 1861		$825,400

The sack of wheat is estimated at 100 lbs., the sack of barley at 90 lbs., and the sack of oats at 80 lbs.

The Eighth Census.

The following is a continuation of the preliminary chapters of the Census Report of 1860, now in course of preparation at Washington, under the direction of Jos. C. G. Kennedy, Esq.

COMPARATIVE INCREASE OF POPULATION.

Thus far in our history no State has declined in population. Vermont has remained nearly stationary, and is saved from a positive loss of inhabitants by only one-third of one per cent. New Hampshire, likewise, has gained, but slowly, her increment being only 8,097, or two and one-half per cent. on that of 1850. Maine has made the satisfactory increase of 45,110, or 7.74 per cent. The old agricultural States may be said to be filled up, so far as regards the resources adapted to a rural population in the present condition of agricultural science. The conditions of their increase undergo a change upon the general occupation and allotment of their areas. Manufactures and commerce then come in to supply the means of subsistence to an excess of inhabitants beyond what the ordinary cultivation of the soil can sustain. This point in the progress of population has been reached, and, perhaps, passed in most, if not all of the New England States. But while statistical science may demonstrate within narrow limits the number of persons who may extract a subsistence from each square mile of arable land, it cannot compute with any reasonable approach to certainty the additional population, resident on the same soil, which may obtain its living by the thousand branches of artificial industry which the demands of society and civilization have created. This is forcibly illustrated by the returns relative to the three other New England States—Massachusetts, Rhode Island and Connecticut—which contain 13,780 square miles. The following table shows their population in 1850 and 1860:

	1850.	1860.
Massachusetts	994,514	1,231,066
Connecticut	370,792	460,147
Rhode Island	147,545	174,620

Their density (or number of inhabitants to the square mile) is as follows:

	1850.	1860.
Massachusetts	127.49	157.88
Connecticut	79.33	98.42
Rhode Island	112.97	133.63

The aggregate territorial extent of Maine, New Hampshire and Vermont, is 48,336 square miles; the number of their inhabitants 1,269,460, or 26.26 to the square mile. The stated point of density was passed by the three States named in the table more than fifty years ago, and yet they go on increasing in population with a rapidity as great as at any former period of their history.

South Carolina has gained, during the decade, 25,201 inhabitants of all conditions, equal to 5.27 per cent. Of this increase 16,825 are whites, and the remainder free colored and slaves. It is, perhaps, a little remarkable that the relative increase of the free colored class in this State was more considerable than that of any other. As their number, 9,914, is so small as to excite neither apprehension or jealousy among the white race, the increase is probably due both to manumission and natural causes. This State has made slower progress during the last term than any other in the South, having advanced only from 27.28 to 28.72 inhabitants to the square mile.

Tennessee, it will be observed, has made but the moderate gain of 10.68 per cent. for all classes. Of this aggregate increase, the whites have gained at the rate of 9.24 per cent. upon 1850, the free colored 13.67, and slaves 15.14.

The next lowest in the rate of increase in the list of Southern States is Virginia, whose gain upon her aggregate population, in 1850, was 174,657, equal to 12.29 per cent. The white class gained 152,611, or 17.06 per cent., the slaves 18,337, or 3.88 per cent.

These are examples of the States wherein the

population has advanced with slowest progress the past ten years. Turning now to the States which have made the most rapid advance, we find that New York has increased from 3,097,394 to 3,880,735, exhibiting an augmentation of 783,341 inhabitants, being at the rate of 25.29 per cent. The free colored population has fallen off 64 since 1850, a dimunition to be accounted for probably by the operation of the fugitive slave law, which induced many colored persons to migrate further North.

The gain of Pennsylvania has been in round numbers 595,000. In that State the free colored have increased about 3,000. The greater mildness of the climate, and a milder type of the prejudices connected with this class of population, the result of benevolent influences and its proximity to the slaveholding States, may account for the fact that this race holds its own in Pennsylvania, while undergoing a diminution in the State next adjoining on the North.

Minnesota was chiefly unsettled territory at the date of the seventh census; its large present population, as shown by the returns, is, therefore, nearly clear gain.

The vast region of Texas ten years since was comparatively a wilderness. It has now a population of over 600,000, and the rate of its increase is given at 184 per cent.

Illinois presents the most wonderful example of great, continuous and healthful increase. In 1830, Illinois contained 157,445 inhabitants; in 1840, 476,183; in 1850, 851,470; in 1860, 1,711,951. The gain during the last decade, was, therefore, 860,481, or 101.06 per cent. So large a population, more than doubling itself in ten years, by the regular course of settlement and natural increase, is without a parallel. The condition to which Illinois has attained, under the progress of the last thirty years, is a monument of the blessings of industry, enterprise, peace, and free institutions.

The growth of Indiana in population, though less extraordinary than that of her neighboring State, has been most satisfactory, her gain during the decade having been 362,000, or more than thirty-six per cent. upon her number in 1850.

Michigan, Wisconsin, and Iowa have participated to the full extent in the surprising development of the Northwest. The remarkable healthfulness of the climate of that region seems to more than compensate for its rigors, and the fertility of the new soil leads men eagerly to contend with and overcome the harshness of the elements. The energies thus called into action have, in a few years, made the States of the Northwest the granary of Europe, and that section of our Union which, within the recollection of living men, was a wilderness, is now the chief source of supply in seasons of scarcity for the suffering millions of another continent.

Looking curiously over the returns, it appears that the fifteen slaveholding States contain 12,240,000 inhabitants, of whom 8,039,000 are whites, 251,000 free colored persons, and 3,950,000 are slaves. The actual gain of the whole population in those States from 1850 to 1860 was 2,627,000, equal to 27.33 per cent. The slaves advanced in numbers 749,931, or 23.44 per cent. This does not include the slaves of the District of Columbia, who decreased 502 in the course of ten years. The nineteen Free States and seven Territories, together with the Federal District, contained, according to the eighth census, 19,201,546 persons, including 27,749 Indians; of whom 18,936,579 were white, and 237,218 free colored. The increase of both classes was 5,598,603, or 41.24 per cent. No more satisfactory indication of the advancing prosperity of the country could be desired than this general and remarkable progress in population. North and South we find instances of unprecedented gains, as in the case of Illinois, just adverted to. In the Southwest the great State of Missouri has increased by the number of 500,000 inhabitants, which is within a fraction of 74 per cent. It is due to candor to state that the marked disproportion between the rate of gain in the North and South respectively, is manifestly to some extent caused by the larger number of immigrants who settle in the former section, on account of congeniality of climate, the variety of occupation, the dignity wherewith respectable employment is invested, and the freedom of labor.

Owing, among other causes, to the extremes of climate in the more Northern States, and in other States to expulsive enactments of the Legislatures, the free colored show a decrease of numbers during the past ten years, according to the census, in the following ten States: Arkansas, Florida, Indiana, Maine, Mississippi, New Hampshire, New York, Oregon, Texas and Vermont.

The free colored have gained eleven thousand in Ohio, three thousand in North Carolina, and one thousand in Maryland. In the latter State the prejudice against this class appears to exist only to a limited extent, and constituting as it does 12¼ per cent. of the whole population, it forms an important element in the free labor of Maryland.

It is important to observe the growing disparity between the pace at which the white and colored races are advancing in this country. While the whites, from 1850 to 1860, gained 38 per cent., the slaves and free colored increased somewhat less than 22 per cent.; and the total increase of the free colored and slaves for seventy years was but 485 per cent. against 757 per cent. for the whites.

TABLE showing the number of inhabitants of the States and Territories at each census from 1790 to 1860, inclusive, and the number of whites, free colored and slaves, respectively, together with the rate of increase of each class during the several decennial terms and for the whole period.

Agg'te Population.	1790.	1800.	Per cent. of Incr.
Population	3,929,827	5,805,825	35.02
White population	3,172,464	4,304,489	35.68
Free colored popul'n.	59,466	108,395	82.28
Free population	3,231,930	4,412,884	36.54
Slave population	697,897	893,041	27.97
Colored population	757,363	1,001,436	32.23

Agg'te Population.	1810.	Per ct. of Increase.	1820.
Population	7,239,814	46.45	9,638,131
White population	5,862,004	36.18	7,861,937
Free colored popul'n.	186,446	72.00	233,524
Free population	6,048,450	37.06	8,095,461
Slave population	1,191,364	33.40	1,538 038
Colored population	1,377,810	37.58	1,771,562

Agg'te Population.	Per ct. of Increase.	1830.	Per ct. of Incr.
Population	33.13	12,866,020	33.59
White population	34.11	10,537,378	34.03
Free colored population.	25.23	319,599	36.87
Free population	33.84	10,856,977	34.11
Slave population	28.79	2,009,043	30.61
Colored population	28.58	2,328,642	31.45

Agg'te Popula'n.	1840.	Per ct. of Increase.	1850.
Population	17,069,458	32.67	23,101,876
White population	14,195,635	34.72	19,553,114
Free colored pop.	386,303	20.87	434,449
Free population	14,581,998	34.31	19,987,563
Slave population	2,487,455	23.81	3,204,313
Colored population.	2,873,758	23.41	3,688,762

Agg'te Popula'n.	Per ct. of Increase.	1860.	Per ct. of Increase.
Population	35.87	31,445,089	35.59
White population	37.74	26,975,575	37.97
Free colored pop.	12.46	488,005	12.33
Free population	36.07	27,463,580	37.40
Slave population	28.82	3,958,760	23.39
Colored population	26.62	4,441,765	22.07

	Rate per cent. of Increase from 1790 to 1860.
Population	700.16
White population	750.30
Free colored population	720.65
Free population	747.66
Slave population	466.53
Colored population	486.48

TOTAL POPULATION IN 1860, INCLUDING INDIAN TRIBES.

Total population of the States and Territories	31,445,089
White population of Indian Territory west of Arkansas	1,988
Free colored population of Indian Territory west of Arkansas	404
Slave population of Indian Territory west of Arkansas	7,369
Population of Indian tribes	294,431
Total	31,749,281

With regard to the future increase of the African race in this country, various extravagant speculations have been recently promulgated. An attentive survey of the statistics of the census will guide to a more satisfactory approximation.

Here the rate of increase will be seen at a glance to have been gradually diminishing, especially during the last thirty years. The greater apparent increase among slaves from 1840 to 1850 is connected with the admission of Texas in 1845. For the future, the rate will probably continue to diminish; and to apply unchanged the rate of the last ten years, must give results exceeding, rather than falling short of the truth. The following estimates, therefore, have been computed on the assumption that the rate of the last ten years, 21.9, shall continue twenty years longer, or until 1880, after which the rate is diminished to 20.0 until the close of the present century, for the colored population. And, to facilitate comparison, the next column exhibits the aggregate of whites, free colored and slaves, based on the well known and very correct assumption of a mean annual increase of three per cent.:

Probable future Population of the United States.

Year.	Free colored and slaves.	Aggregate of whites and col'd.	Per centage of col'd.
1870	5,407,130	82,328,422	12.77
1880	6,591,292	56,450,241	11.68
1890	7,909,550	77,266,989	10.24
1900	9,491,459	100,355,802	9.46

Thus, according to the best estimates, the total population of the United States at the close of the present century will be about a hundred millions. All observing persons will perceive that the relative increase of the whites exceeds that of the colored, and that the disparity is gradually becoming more and more favorable to this part of our population. Leaving the issue of the present civil war for time to determine, it should be observed, if large numbers of slaves shall be hereafter emancipated, so many will be transferred from a faster to a slower rate of increase. In this case, nine millions of the colored, in the year 1900, appears a large estimate. Of these a great portion will be of mixed descent, since in 1850 one-ninth part of the whole colored class were returned as mulattoes. In regard to emigration, the number colonized by the American Colonization Society and its auxiliaries during the past ten years, has averaged about 400 per annum, besides the Africans captured on several slave ships. The total number of colored emigrants sent to Liberia from 1820 to 1856, inclusive, is stated at 9,502, of whom 2,676 were free born.

With regard to manumission, it appears from the returns that during the census year they numbered a little more than three thousand, being more than double the number who were liberated in 1850, or at the rate of one each to 1,309, whereas, during 1850, the manumissions were as one to every 2,181 slaves. Great irregularity, as might naturally be expected, appears to exist for the two periods whereof we have return on this subject. By the eighth census it appears that manumissions have greatly increased in number in Alabama, Georgia, Louisiana, Maryland, Mississippi, North Carolina and Tennessee, while they have decreased in Delaware and Florida, and varied but little in Kentucky, Missouri, South Carolina and Virginia, and other slaveholding States not mentioned.

The number of slaves who escaped from their masters in 1860 is not only much less in propor-

tion than in 1850, but greatly reduced numerically. The greatest increase of escapes appears to have occured in Mississippi, Missouri, and Virginia, while the decrease is most marked in Delaware, Georgia, Louisiana, Maryland and Tennessee.

That the complaint of insecurity to the slave property by the escape of this class of persons into the free States, and their recovery impeded, whereby its value has been lessened, is the result of misapprehension, is evident, not only from the small number who have been lost to their owners, but from the fact that up to the present time the number of escapes has been gradually diminishing to such an extent that the whole annual loss to the Southern States from this cause bears less proportion to the amount of capital involved than the daily variations which, in ordinary times, occur in the fluctuations of State or Government securities in the city of New York alone.

It appears that while there escaped from their masters 1,011 slaves in 1850, or one in each 3,165 held in bondage, (being about 1.30 of 1 per cent.,) during the census year ending June 1, 1860, out of 3,949,557 slaves, there escaped only 803, being one to about 5,000, or at the rate of 1.50 of one per cent. Small and inconsiderable as this number appears, it is not pretended that all missing in the border States, much less any considerable number escaping from their owners in the more southern regions, escaped into the free States, and when we consider that in the border States not 500 escaped out of more than 1,000,000 slaves in 1860, while near 600 escaped in 1850 out of 910,000, and that at the two periods near 800 are reported to have escaped from the more Southern slaveholding States, the fact becomes evident that the escape of this class of persons, while rapidly decreasing in ratio in the border slave States, occurs independent of proximity to a free population, being in the nature of things incident to the relation of master and slave.

It will scarcely be alleged that these returns are not reliable, being, as they are, made by the persons directly interested, who would be no mere likely to err in the number lost than in those retained. Fortunately, however, other means exist of proving the correctness of the results ascertained, by noting the increase of the free colored population, which, with all its artificial accretions, is proven by the census to be less than 13 per cent., in the last ten years, in the free States, whereas the slaves have increased 23½ per cent., presenting a natural augmentation altogether conclusive against much loss by escapes; the natural increase being equal to that of the most favored nations, irrespective of immigration, and greater than that of any country in Europe for the same period, and this in spite of the 20,000 manumissions which are believed to have occured in the past ten years. An additional evidence of the slave population having been attended from year to year, up to the present time, with fewer vicissitudes, is further furnished by the fact that the free colored population which from 1820 to 1830 increased at the rate of 36 1-5 per cent., in 1840 exhibited but 20 4-5 per cent. increase, gradually declining to 1860, when the increase throughout the United States was but one per cent. per annum.

New Brunswick and Canada Railway.

The 10th of July, was a stirring day in the usually still and always pretty town of St. Andrews. On that day, the line to the Woodstock road was formally opened, and the N. B. and C. Railway, after long delay, much anxiety and trouble, and difficulties, only overcome by great determination and perseverance, was completed, and high holiday was kept on the occasion. The 10th was a glorious summer day, the pretty town was dressed out with flags and banners, while the beautiful bay looked alive with vessels and boats, gay with bunting and streamers. From St. Stephen, Calais, St. George, Maguaguadavic, visitors arrived at an early hour, amongst the most distinguished of whom were the volunteer companies. About a quarter past eleven the train [having done the distance of eighty-five miles in little over four hours] from Woodstock and Houlton arrived, crowded with passengers, amongst whom were Capt. Baird's rifles, without their rifles. The forenoon was passed pleasantly, the chief point of attraction being the bay and the boats. Several exciting races took place. At half after two there was a public dinner, at which two or three hundred were present, chief amongst whom were Capt. Robinson, Commissioner, in the chair, supported by Colonel Boyd, the Hon. G. L. Hatheway, Hon. Charles Fisher, H. Osborne, Esq., &c., &c. There was some congratulatory speaking after "the cloth was removed," and some post prandial information was given about the Intercolonial, which awaits authentication.—*New Brunswick Head Quarters,*

The New Federal Currency.

The following is a description of the new change currency of the Federal Government, and also the U. S. Notes of larger denomination:

The Stamps are fundable into Notes, and the Notes are fundable into 5.20 6 per cent Bond.

Denomination.	Size in Inches.	Vignette.	Color.
5 cts.	1⅛ by 2⅛	5c. P. O. stamp.	brown.
10 "	1⅛ " 2⅛	10c. P. C. stamp.	green.
25 "	1⅛ " 3	Five 5c. P.O. stamps.	brown.
50 "	1⅛ " 3	Five 10c. P.O. stamps,	green.
$1	3 " 7⅛	Chase	black and green.
2	3 " 7⅛	Hamilton	black and green.
5	3 " 7⅛	Figure 5	black and green.
10	3 " 7⅛	Spread Eagle	black & green.
20	3 " 7⅛	Female stand'g.	blk & green
50	3 " 7⅛	Hamilton	black and green.
100	3 " 7⅛	Eagle flying	black and green.
500	3 " 7⅛	Wsshington,	black and green.
1000	3 " 7⅛	Chase	black and green.

Under act of Feb. 25, 1862—5s to 1000s—$150,000,000; but as long as any portion of the above sixty millions was not redeemed, this issue should be restricted, so that the currency outstanding should not exceed the 150 millions. There is now in circulation, issued under the above acts, 150 millions, less say ten millions on hand in the Treasury and various sub-Treasuries. Deducting 10 millions on hand, and 38 millions old Demand Notes that have ceased being used for currency, we find that the people are using 102 millions of Government currency. Under recent acts the Secretary of the Treasury can, and is preparing to issue stamp currency, under $1, say..$36,000,000
Do., of 1s, 2s and 3s..... 35,000,000
Do., of 5s to 1,000s..... 65,000,000
and to prepare for use, in case the temporary deposits are drawn out 50,000,000
This gives an entire volume of Government paper money of $336,000,000, all of which is virtually and practically fundable into a 6 per cent. 20-year Federal Stock, redeemable, however, at the option of the Government, at any time after 1867.

Erie and Pittsburg Railroad.

The contracts for the completion of this road from its present southern terminus to New Castle, Lawrence county, has been awarded to W. L. Scott, Esq., of Erie. The work of grading and laying the cross-ties will be finished this summer, though it is possible the track may not be laid for another season. At New Castle the Company will have a connection with the Pittsburgh and Cincinnati by means of the Pittsburg, Fort Wayne and Chicago route. The Cleveland and Erie road furnishes the rolling stock for the portion now in operation.

Northern Central Railroad.

The ordinance to extend the time allowed the Northern Central Railway Company to complete its connection with tidewater at Canton, which was vetoed by the Mayor, was declared yesterday by the First Branch of the City Council to be a law, for the reason alleged, that the Mayor did not return said ordinance with his veto within five days as prescribed by law. The ordinance confirms a donation to the Company, as stated by the Mayor, of over $1,000,000.—*Baltimor Sun, August 7.*

Delaware and Raritan Bay Railroad.

The Delaware and Raritan Canal and Camden and Amboy Railroad and Transportation Companies agt. The Raritan and Delaware Bay Railroad Company, The Camden and Atlantic Railroad Company and others.

Under a legislative act of March 2, 1832, and its supplements, the Camden and Amboy Railroad Company has claimed the exclusive right of the transportation business between New York and Philadelphia. The grant is, in substance: "That it shall not be lawful at any time during the continuance of the charter to constructa ny other railroad, without the consent of the Companies, which shall be intended or used for the transportion of passengers or merchandise between the cities of New York and Philadelphia or to compete in business with the Camden and Amboy Railroad."

The rival road, however, is in process of construction, the intention being to have it completed toward the close of August, with the low rate of fair of $2 between New York and Philadelphia. The new line is known as the Raritan and Delaware Bay Railroad, the Company being granted general powers to construct a railroad from some point on the shore of the Raritan Bay to the lower peninsula of New Jersey, intersecting the Camden and Amboy Railroad. The northern terminus of the line is on Raritan Bay, 23 miles distant from New York. The main line diverges gradually to the southwest, and, crossing Ocean and Burlington counties, reaches the Camden and Atlantic Railroad in Camden county, where it is proposed to form the connection with the last named road, about 20 miles from Philadelphia.

Action has been brought to restrain the defendants from the construction of the road. The complainants filed their bill on the 18th ultimo. On Tuesday morning at ten o'clock, the case was brought before Chancellor Greer, at Trenton, N. J. Messrs. Jos. P. Bradley of Newark, John B. Stockton of Trenton, Courtland Parker of Newark, and R. S. Field of Princetown, appeared for the complainants, and Chancellor Williamson, Attorney-General Frelinghuysen of New Jersey, ex-Gov. Peter D. Vroom, A. O. Zabriskie of New-Jersey, Judge T. B. Carpenter of Camden, and Theodore Cuyler of Philadelphia, for the defendants.

The latter were ready for the proceedings, but the complainants asked for time to read the answer and affidavits of defense. This was granted, the Court adjourning for that purpose to three o'clock p. m., when the case was resumed and continued till six o'clock in the evening.

The answer denies the entire equity of the complainant's bill, and also the constitutional validity of the special privileges of the Company. It moreover asserts that the complainants acquiesced in the obtaining of their charter by the defendants, and that they have stood by, after being notified in writing of the defendants' intention to construct this road, and permitted the investment of large sums of money, and the road to approach almost completion, before applying for an injunction; and that in consequence, they have no equity for the special relief they seek.

The reading of the answer and affidavits having been resumed, and when the argument was about to proceed, Mr. Bradley on behalf of the complainants, asked leave of the Court for further time to amend their bill in one respect, and to provide affidavits in answer to the new matter, which, he contended, was presented by the respondents in their answer. The amendment proposed to the bill was in stating the acceptance by the Company of the act of 1854, modifying their charter. The new matter to which it was proposed to make reply, consisted in allegations of the acquiescence by the complainants in the obtaining of their charter by the defendants, and in the line adopted by them for their road; also, of allegations in the answer that the route they had selected was in conformity with their charter, and was the best the topography of the country through which the road passed would permit.

Mr. Bradley further asked for a restraining order of the Court, preventing the defendants from

proceeding with their work during the pending of thecase. After argument by Messrs. Bradley and Field, for the complainants, and ex Governor Vroom and Mr. Frelinghuysen for the respondents, the Court refused to discontinue the progress of the work. The request for the amendment of the bill was allowed, and the case was continued to August 12, the complainants to take further affidavits if so desiring, and the respondents to make answer in reply.

Railroad Earnings--Weekly.

The Chicago and Northwestern Railroad earned in the 1st week of August, 1862 ..... $16,573 29
Do., 1861 ..... 12,488 24

Increase $4 085 05

The earnings of the St. Louis, Alton and Chicago Railroad for the 1st week in August, 1862 were $21,837 51
Do., 1861 ..... 20.405 75

Increase $1,431 76

The Chicago and Rock Island Railroad earned the 1st week in August 1862 ..... $24 024 00
Do., 1861 ..... 19 824 00

Increase $4,200 00

The Galena and Chicago Railroad earned the 1st week in August, 1862 ..... $23 827 00
Do., 1861 ..... 25,132 00

Decrease $1,305 00

The Michigan Central Railroad earned in the 1st week of August, 1862 ..... $42.060 37
Do., 1861 ..... 24 891 71

Increase $17,168 66

The traffic of the Great Western Railway of Canada for the week ending August 1, 1862, was as follows:

Passengers $17,449 01
Freight and live stock 18,562 81
Mails and sundries 1,763 99

$37 775 81
Corresponding week of last year..... 27,393 29

Increase $10.382 52

The receipts of the Grand Trunk Railway of Canada for the week ending August 2, 1862, were:

18 805 passengers $25,577 46
Mails and sundries 2.933 68
Freight and live stock, 8,959 tons.... 30.192 70

Total $58.703 84
Corresponding week of last year 63,306 68

Decrease $4,602 84

Atlantic and St. Lawrence Railroad.

A contemporary states that the stockholders of the Atlantic and St. Lawrence Railroad, at a recent meeting held in Portland, *accepted* the new arrangement proposed by the Grand Trunk Company of Canada. It remains to be seen how the English stockholders, who are a majority, will decide; though we suppose they will acquiesce in the plan as the best that can be adopted under the circumstances. The details of it were published in the last number of the JOURNAL.

American Silver Coinage.

Prior to 1853 the weight of the American dollar was 412½ grains of standard silver, nine-tenth fine. After February, 1853, the weight of the dollar was fixed at 484 grains, and that of the smaller coins reduced to correspond with this weight. The quality of the silver is the same as that of the previous coinage. It is now proposed that eights and sixteenths of a dollar shall be coined at the rate of 320 grains to the dollar, which would be a further reduction of about 17 per cent., and so forbid export.

The Gold Question.

We know of nothing more remarkable and anomalous in commercial affairs than have been the recent fluctuations in the price of gold, which at the same time have been unaccompanied by corresponding fluctuations in the prices of all other kinds of property. It would be naturally inferred, as the common measure of values fluctuated in price, that of all other products and values would show a corresponding change. That such has not been the fact, proves that the causes that have acted upon prices have been to a very considerable extent accidental, and that we cannot get at the actual measure of the depreciation of the currency put forth by the United States, until these causes cease to exert their influence.

The cause that has so far acted chiefly upon the price of gold has been the demand for exportation created by the sale of very large amounts of the securities issued by our State and National Governments, and by Municipal and Corporate bodies, which have been recently sent home for that purpose. Had it not been for such demand, the premium for gold might not have gone above 10 per cent. All beyond we may regard as extraordinary, to be held or lost, for the present, in ratio as we shall receive back our securities for sale. Had the full rise of 20 per cent. been entirely natural, everything else would have gone up with it. But as it was not, prices of all other kinds of property remain very nearly stationary, having not yet advanced 10 per cent. from the depreciation of the currency alone. Other causes have operated to put up prices for many kinds of merchandise, but these are entirely independent of that of currency.

While Treasury Notes can never perform the office of money, in its proper sense, their values as *merchandise* must depend upon the value of the bonds of government into which they are convertible. Such bonds cannot be considered as being at a discount of more than 5 per cent., with a specie basis. The 20 year bonds of government were not long since at a premium for gold. Treasury Notes convertible into them would have commanded a similar premium. Its credit since that time can hardly be said to have been weakened. Railroad securities are at very nearly the prices they were with a specie standard. In proportion as the credit of government is maintained, that of the Treasury Notes, as merchandise, must be, which renders it entirely impossible, without a much greater experience, to state the per centage of the advance of gold due to the introduction of a new currency, and a new standard of value.

Prices for the future must depend upon the demand for export, and upon the credit of government. Only a few years ago, its 20 year bonds sold at 122, which would be at a premium at the highest price gold has yet touched. The value of a bank bill depends upon the value of the constituent of which it is a representative. The value of a Treasury Note, in the same way, is measured by the value of its constituent—the promise of, and the confidence placed in, the Government of the United States.

A certain degree of depreciation is the necessary result of an attempt to substitute a currency, the value of which depends upon the credit of government, instead of upon *cost*. This depreciation must in the long run be in ratio to quantity. But we are not certain but that the effect of such depreciation may be to cause a flow of the precious metals into, instead of from the country; or, perhaps we should say, such depreciation will have of itself no tendency to check such importations which must always be controlled by the laws of trade. As soon as the return of our securities cease, the balance of trade must be largely in our favor. It was in our favor in 1861 to the amount of more than $50,000,000, notwithstanding that our importations for the first six months of the year were from orders that were sent out under a belief that the peace of the country would remain undisturbed. Since then, two highly protective tariff bills have been passed, while from a passion for economy, there has been a very large reduction in the consumption by our people of foreign merchandise. Our exports for 1862 are on a larger scale than for the previous year, while our imports must be greatly reduced. In 1861 the government imported very largely of munitions of war. Such importations are now at an end. The large balance that must result in our favor must be discharged, as in 1861, by shipments to us of gold. We do not see how it can be otherwise. In fact, gold must soon come to this country in obedience to the laws of trade. A few days ago it was at a premium of 20 per cent., while nearly all other kinds of property remained at former prices. Such a state of things would give the possessor of the precious metals, the benefit of the premium in the purchase of merchandise and property. If prices adjusted themselves according to the gold standard, he would realize the advance. If the price of gold fell back to its former relative value, his gains would, in effect, be the same.

There is every reason, consequently, why gold should flow rapidly into this country, except for the apprehension felt in reference to the disturbed condition of political affairs. But we believe such apprehensions will be speedily quieted. The effect of the prosecution of the war will be to consolidate only the more firmly the unity and power of the loyal States. They will more than ever constitute a nation, whose industries and commerce will rest upon the most solid foundation. Nowhere does society stand upon a firmer basis. All this will soon be seen, and that property is nowhere more safe or productive, and that no obligations are more likely to be met, than those of our people. On the whole therefore, our commercial strength, with the increased confidence which must henceforth be felt in the stability of our affairs, must turn the flow of gold toward us, a fact which must greatly mitigate the effects of a vicious system of national finances; and, when the evil of this is fully seen and appreciated, will show a comparatively easy solution for them.—*Hallett's Financial Circular.*

Watertown and Rome Railroad.

The extension of this Railroad, from Watertown to Ogdensburgh, will be formally opened on Wednesday next. A large number of invited guests from this city expect to be present on that occasion.

Advance in Railway Fares.

A meeting of Presidents of railroads leading from Cincinnati was held in that city on Saturday, at which it was agreed to advance the fares on and after Sept. 1, about five cents on every fare that exceeded thirty cents, to meet the tax levied by the General Government, of 3 per cent. on the gross receipts of passenger fares. It was understood that the advance in the fare to New York would be about one dollar.

AMERICAN RAILROAD BOND LIST.

(*) signifies that the road is in the hands of receivers. (†) that the company is in default in its interest. S. F.," Sinking Fund. "var," that the bonds fall due at different periods

American Railroad Journal.

Saturday, August 16, 1862.

Stock and Money Market.

During the past week the Stock Market has improved considerably; and with some slight fluctuations, the price of gold has tended rather downward. The advance on securities is, therefore, real, not nominal, as it was while the standard of value (the paper dollars) was depreciating.

In Railroad Bonds there has been an active movement with an upward tendency in prices. On Wednesday their figures were higher on the whole than at any time during the month preceding. New York Central Stock closed at 92⅞; Erie, at 37¼; Erie Preferred, at 67¾; Illinois Central, at 61⅛; Chicago and Galena, at 76½. The facts that Europe will continue to call largely on us for breadstuffs, and that we have these in abundance to export are doubtless influencing the values of our principal railroad securities.

The most noticeable circumstance in the money market is the enormous amount of deposits which have accumulated in the banks of this city. The last weekly statement shows that these amounted to $139,544,680 *net*, an increase during the week of $2,431,743, and for the present year of over $28,000,000. The specie line also shows a gain of over half a million, notwithstanding the loss of the California steamer with $1,400,000 on board. The sum total of gold and silver is now $34,611,069, but this should have been increased by about a quarter of a million which was actually on hand last Saturday, though not reported. This increase, in spite of heavy shipments to Europe, is undoubtedly owing to the premium on specie, which brings into bank large amounts that used to pass current among the people, their places being now taken by stamps and other inferior descriptions of paper accepted as currency.

The accumulation of deposits denotes such a plethora in money as has never before been witnessed in this country. Bankers are eager to lend on five and even four per cent. for a short period on first-class security. Money is even advertised to loan on bond and mortgage for a term of years at one per cent. below the legal rate of interest in this State. It is evident that manufacturers, importers and other classes of business men are unwilling to engage in any enterprises, the profits on which are uncertain or remote. The supply of the more pressing wants of the community and those of the government are alone thought of, consequently, money goes begging profitable employment, almost on the borrower's own terms. It is noteworthy that a similar state of things exists in England at the present time, where the rate of interest has been reduced to two per cent. per annum.

The price of exchange on London was, on Wednesday, 126, which, by deducting the premium on gold, is equal to 111½, or two per cent. above par, indicating that moderate shipments of the precious metals to Europe may still be expected for a time. United States 7.30 notes, the same day, closed at 103½; Custom House notes, at 106½; and United States bonds of 1881 at 100¼.

An Argument for the Pacific Railroad.

The loss of the Steamer Golden Gate with nearly one million and a half of treasure and two hundred lives, is a powerful argument for building the Pacific Railroad. Adding to the specie the cost of the vessel, her cargo, effects in passengers' hands, and the pecuniary value of those lives, the aggregate would foot well up to three millions of dollars—enough to build the first fifty miles of road. The painful lesson should not be lost upon the people of this country.

Galena and Chicago Railway.

By reference to the following from the Chicago *Tribune*, it will be seen that this Company have taken a perpetual lease of the Chicago, Iowa and Nebraska Railroad, extending 122 miles west from Clinton, Iowa, a point on the Mississippi river opposite Fulton, Ill., the western terminus of the Air Line road. This gives the Galena and Chicago Railroad Company control of a line of road, extending 258 miles due west from Chicago, through the richest and most prosperous section of the West. The length of line hitherto operated by this Company has been about 261 miles; this will now be increased to 383 miles.

The following is a statement of the earnings of the road for the first seven months of 1862, as compared with the same months of 1861 & 1860:

	1860.	1861.	1862.
January	$60,653	96,983	106,180
February	62,698	77,079	101,691
March	80,793	100,767	76,175
April	93,254	103,499	86,654
May	115,506	140,692	158,194
June	93,449	164,933	215,708
July	80,709	144,127	190,971
Total 7 months	$587,062	828,080	935,473

The earnings of last year enabled the directors to pay eight per cent in dividends. At the rate of increase indicated above, and with the present harvest, there is no reason why these should be diminished. It is thought that the earnings of the road this fall will be the largest in its history. The *Tribune* says:—

We learn that the negotiations for some time past pending between the Galena and Chicago, the Iowa and Nebraska and the Cedar Rapids and Missouri railroad companies, have resulted in the permanent lease of their roads by the latter companies to the former, which commenced on the 1st instant. By this arrangement, the Galena Air Line, *via* Fulton, is virtually extended to Otter

Creek, a station on the C. R. and M. line, 122 miles west of the Mississippi, at Clinton, Iowa, to which place this line is now operated. The road bed from thence to Marshalltown, the county seat of Marshall county—a distance of thirty miles—is nearly ready for the iron, and by the terms of the contract, is to be constructed before the 1st of January, 1863.

It is expected that this work will be continued next year west of Marshalltown, to the Missouri River, at a point not yet designated, but upon a line favorable to a connection with the proposed road to the Pacific coast.

We truly congratulate the Galena and Chicago road upon the completion of this contract. It cannot but be beneficial to this old and well established company, and add greatly to its present enormous business. It will, we doubt not, prove equally advantageous to the other lines—making one trunk line of the three. We shall thus have an unbroken line, under one direction, without change of cars, (the crossing of the Mississippi being accomplished mainly by a bridge and a short stream ferry,) into the centre of Iowa, opening up to this city a country unsurpassed in beauty or fertility.

Advance in Railway Freights.

The following are the new rates of freight which went into operation at Cincinnati on the 4th inst.:

	1st Class.	2d Class.	3d Class.	4th Class.	Flour, p.bbl.	Cotton, p.bale.

St. Louis, Alton and Terre Haute Railroad.

This company have commenced issuing their first mortgage bonds in exchange for the old surrendered bonds. The new issue consists of Series A, $1,100,000 bonds, due 1894, interest payable January 1 and July 1; Series B, $1,100,000 bonds, due 1894, interest payable April 1 and October 1.

The company will soon commence delivering second mortgage bonds in exchange for the old issues of the Terre Haute and Alton Company. The new issue of Second Mortgage Bonds will be as follows:—Series C, $1,400,000, coupons due February and August, preferred; Series D, $1,400,000, coupons due May and November, preferred; Series E, $1,600,000, coupons due May and November, income. All secured by one mortgage. The holder of one thousand dollars of the old bonds will get $1,000 in bonds of the new series C or D, and about $620 in bonds of the new leries E.

Central Railroad of New Jersey.

The following is a statement of receipts and expenses for the six months ending June 30th, compared with the corresponding six months of 1861; a similar comparison of the coal tonnage; and a condensed statement of the company's position on the 1st July instant:

MONTHS.	Passengers, merchandise, mails, etc.	Coal.	Total, 1862.
1862. January	$53,954 24	$36,035 34	$89,989 58
February	56,706 59	21,328 46	78,035 05
March	61,611 32	37,459 97	99,071 29
April	60,482 37	50,736 34	111,218 91
May	70,619 14	59,772 71	130,391 85
June	55,475 31	21,105 12	76,580 43
Total	$358,749 17	$226,487 94	$585,237 11
1861. Same months	291,870 30	270,624 66	562,494 96
Increase	$66,878 87	dec $44,136 72	$22,742 15

	1862.	1861.	
Receipts for 6 months	$585,237 11	$562,494 96	Increase. $22,742 15
Expenses	274,843 23	240,517 32	34,325 91
Net earnings	$310,393 88	$321,977 64	dec $11,583 76

	1862.	1861.	
Lackawanna coal tonnage for 6 mos	229,456	263,717	Decrease. 34,231
Lehigh do.	102,923	114,449	11,636
Total	332,309	399,166	66,857

CONDENSED BALANCE SHEET, JULY 1ST, 1862.

Railroad, 64 miles, (50 being double track)		$4,513,482 04
Land and wharves at Elizabethport		298,469 00
Station houses, shops, etc.		132,000 00
Engines and cars		508,762 22
Ferry interest and boats		257,200 00
Property accounts		208,143 10
Cash balances, etc.	$196,400 84	
Less accounts payable	113,260 90	
		83,139 94
		$6,001,196 30
Castal stock		$3,630,000 00
Bonds, 1st mortgage	$1,400,000	
" 2d "	600,000	
		2,000,000 00
Interest fund; interest accrued not yet payable		47,833 33
Dividend No. 29, payable July 16th		90,750 00
Renewal fund, balance to credit		172,855 39
Net earnings	$310,393 88	
Less—		
Interest acc't.	$69,136 30	
Dividends	181,500 00	
	250,636 30	
		59,757 58
		$6,001,196 30

The net earnings of the six months are thus shown to be $310,393 88, being a decrease of $11,583 76 on those of the corresponding six months of 1861. This is owing to the damage done to the coal roads by the great freshet of June, which cut off the whole coal trade for a fortnight, and that from the Lehigh region for a month, making a reduction of over $44,000 in the receipts from coal. This will be more than made up before the close of the season, as there is a great demand for coal and better prices are obtained for transportation.

After deducting the balance of the interest account and two quarterly dividends of 2½ per cent. each, there remains a surplus of profits of $59,757 58. Of this amount $32,585 25 has been expended on the work at the High Bridge and on the extension of the second track westward from Hampton Junction.

Rome, Watertown and Ogdensburg R. R.

The new line of the Rome, Watertown and Ogdensburg Railroad has been opened, by bringing into use the nineteen miles of new road, giving a short and direct route to Ogdensburg. Trains leave Ogdensburg at 5 A. M., reaching Rome at 11, Albany at 3.30 P. M., and New York at 9.30 P. M. Passengers leaving New York at 7 A. M., and Albany at 12.20 M., reach Ogdensburg, at 10.30 P.M. Passengers leaving Ogdensburg at 3 P. M., and New York at 5 P. M., connect directly through, and reach New York and Ogdensburg respectively during the next forenoon. This new line makes the distance between Ogdensburg and Albany and New York seventy-three miles less than by any other railroad route.

Commerce of San Francisco.

The exports of merchandise from San Francisco for the first six months of the present and two preceding years have been as follows:

To	1860.	1861.	1862.
New York and Boston	$839,800 00	$931,521 70	$1,450,820 99
England		1,688,295 33	877,967 99
Mexico	539,916 44	576,388 55	871,795 94
Peru	24,629 65	88,718 80	141,115 87
Sandwich Islands	108,617 34	103,588 02	130,808 42
China	194,008 67	295,024 60	304,730 69
Australia and New Zealand	329,276 89	258,462 40	93,696 18
Victoria, B. C.	869,866 36	557,346 49	1,172,447 87
Japan	14,910 65	5,486 50	4,578 00
Other countries	464,632 28	490,455 62	494,768 61
Totals	$3,431,688 28	$4,947,956 71	$1,542,728 61

The merchandise and treasure exports were:	1860.	1861.	1862.
Merchandise exports	$3,431,688	$4,947,957	$1,542,728
Treasure exports	21,886,045	18,536,143	16,832,616
Total	$25,317,733	$23,514,100	$21,375,344

The custom house duties for the six months were:

January	$137,935 64
February	229,687 88
March	235,756 88
April	307,023 01
May	308,413 17
June	256,830 00
Total	$1,475,696 58

Incrustation in Steam Boilers.

Since the success of Mr. WINANS' Anti-Incrustation Powder has become apparent to the world, and particularly to the Pirates who are ever ready to take advantage of other people's successes, there are certain unscrupulous parties in different sections of the country trying to introduce a material, for a similar purpose, similar in appearance and similar in name. Parties will do well to be cautious how they use such imitations, as they will probably be dealt with according to law; but at all events, they should give the preference to that which is best and original in the field, besides being sure of no bad effects from its use, which may be said of Mr. Winans' Powder, having stood the test for six years, by many of the leading railroads. For sale only by H. N. WINANS, New York.

Railroad Earnings--Monthly.

The earnings by the Chicago, Burlington and Quincy Railroad for July, 1862, were. $220,210 76
Do., 1861 .... 169,465 07

Increase $50,745 69

The business of the Illinois Central Railroad for July, 1862, was:

Land Department.

Acres Construction Lands sold	4,196.19	for	$46,479 90
Acres Interest Fund L'ds sold	998.61	"	11,248 64
Acres Free Lands sold	2,351.26	"	26,109 86
Total sales during the month	7,546.06	for	$83,838 40
To which add Town Lot sales			1,088 40
Total of all			$84,926 80
Acres land sold since Jan'y 1, 1862	51,969.80	for	$600,604 21
Acres sold prev'sly (net sales)	1,260,273.46	for	16,147,983 91
Total	1,312,243.26	for	16,748,588 15

Construction bonds canceled previous to June 30 .... $2,121,500 00
Cash collected in July 34,182 63
53,000 bushels corn received, in July, on hand.
Net collections to June 30, 1862... 4,244,607 85

Traffic Department.

Receipts from passengers		$82,293 45
" freight		153,136 50
" mails		6,358 34
" rent of road		5,333 33
" other sources		2,808 23
Total receipts for July, 1862		$249,929 85
Do. do. 1861		189,279 75

Increase $60,650 10

Original land grant, 2,595,000 acres; railway, 706 miles of main track, and 97 miles of sidings, 113 engines, 2,456 cars. Funded debt, $15,234,500.

The receipts of the New York and Harlem Railroad for July, 1862, were. $101,857 00
Do., 1861 .... 92,802 23

Increase $9,054 77

The earnings of the Michigan Central Railroad for July, 1862, were $172,188 80
Do., 1861 .... 123,377 30

Increase $48,811 50

The Michigan Southern Railroad earned in July, 1862 .... $181,000 00
Do., 1861 .... 126,000 00

Increase $55,000 00

The earnings of the Galena and Chicago Railroad Company in July, 1862, were 190,971
Do., 1861 145,389

Increase $45,582

The gain on the last week of July was $6,860.

The Chicago and Rock Island Railroad earned in July, 1862 .... $114,057
Do., 1861 88,992

Increase $25,065

The last week showed an increase of $7,107.

The Cleveland and Toledo Railroad earned in July, 1862 .... $69,938 00
Do., 1861 .... 56,134 00

Increase $13,804 00

The last week in July gave an increase of nearly $5,000. These are the highest July earnings since the road opened.

The earnings of the Hudson River Railroad for July, 1862, were $159,768 73
Do., 1861 .... 114,804 23

Increase $44,964 50

The earnings of the Toledo and Wabash Railroad for July were.

	1861.	1862.
Passengers	$13,782 05	$19,274 00
Freight	77,682 21	95,940 00
Total	$91,464 26	$115,214 00
Increase		23,750 00

The earnings of the St. Louis, Alton and Chicago Railroad for July, 1862, were ... $89,215 71
Do., 1861 .... 73,474 19

Increase $15,741 52
Total since Jan. 1st, 1862 .... $608,163 17
Same time, 1861 .... 513,356 41

Increase $94,806 76

The earnings of the Chicago and Northwestern Railroad for July, 1862, were $93 021 72
Do., 1861 .... 76,897 10

Increase $16,124 62

The earnings of the Milwaukee and Prairie du Chien Railroad in July, 1862, were.. $108,721 51
Do., 1861 .... 107,116 61

Increase $1,604 90

The earnings of the Buffalo, New York and Erie Railway, for July, 1862, were $58,180 55
Do., 1861 .... 46,413 75

Increase $11,766 81

The July business of the New York Central for the past ten years has been as follows:

July, 1853	$330,000	July, 1858	$158,000
" 1854	425,000	" 1859	504,000
" 1855	471,000	" 1860	544,000
" 1856	624,000	" 1861	523,000
" 1857	505,000	" 1862	748,000

Hudson River Railroad.

The earnings of this road for seven months ending July 31, 1861 and 1862, have been as follows:

	1861.	1862.
January	$223,157	$307,330
February	205,343	281,568
March	167,560	307,963
April	139,751	202,346
May	150,808	192,442
June	123,382	151,427
July	114,804	159,769
	$1,124,805	$1,603,845

Increase in seven months, $479,040.

Cleveland, Columbus and Cincinnati R. R.

The following is a comparative statement of the gross and net earnings of this road for the first six months of the past and preceding years:

	1861.	1862.
Gross earnings Jan. 1 to June 30	$504,459 61	$701,530 79
Expenses, interest and taxes	281,960 25	324,590 52
Net earnings	$222,499 36	$376,940 27
Dividend of 5 per cent.		237,310 06
Surplus		$139,630 21

—exhibiting an increase in gross earnings of $197,071 18; and in net earnings of $154,440 91.

Self-Acting Car Couplings.

Messrs. Editors of the
American Railroad Journal.

In looking over the business advertising in your excellent Journal I find no advertisement of "Self-couplers" for coupling railroad cars. I know that numerous contrivances of the kind have been patented, but I know of none in use, nor the names of the parties interested. Can you direct me to such parties?

"Chief Engineer."

The above comes to us in a letter from a well-known Civil Engineer of the West, and we call to it the attention of inventors and manufacturers o self-acting car couplings.

We have seen any quantity of devices of this kind, but we know of no particular one having such marked and conceded superiority over others as to be generally used. Neither can we call to mind the name or description of any such invention, to which to refer our correspondent, so little publicity has been given in the proper journals to the various plans which have been patented. If inventors or manufacturers of such articles who have printed circulars or lithographs, will forward one to us with a statement of the use and success of the device, we will convey the information to our correspondent.

(From the London Artizan, May, 1862.)

On Single and Continuous Straight Girders.

By Mr. Francis Campin.

After a few preliminary remarks upon the impulse given to the progress of bridge building by the introduction of wrought iron as a material for that purpose, the author proposed to explain a simple and practical method of proportioning the flanches of straight girders. The amount of strain upon any part of a straight girder, might be calculated to the greatest nicety by formulæ deduced from mathematical investigations, which, however, are generally too complicated to be practically available.

The curve of strain upon a girder simply supported at each extremity is a parabolic segment, which, however, may be closely approximated by a circular segment, hence the least area of any section of the flanches may be measured on the ordinates of a curve drawn as follows:—

Find the area at the centre of the girder, from which point lay off to scale at right angles to the girder, an ordinate representing such area, then describe a circle passing through the extremities of the ordinate and line of girder. It is desirable that the vertical scale of areas be as small as possible in proportion to the horizontal scale. The area of either flanch at the centre, including loss by rivets, may be found from the expression, $0.0313 \frac{w\,l^2}{d}$, where w = load in tons per foot run, l = space in feet, d = depth in feet, the result being the area in square inches.

One span of a continuous girder may be regarded as virtually divided into two or more parts, a central part acting as a girder supported at each end, and limited in length by the points of contra-flexure, which part may be treated exactly as any ordinary single girder as described above, and one or two end parts, of which each acts as a girder fixed at one end and free at the other, bearing an uniform load, w, per foot run distributed over its length, and a concentrated load at its extremity, equal to half the total load on the central part of the girder. The area at the point of fixture being found for either flanch from the expressions, $\frac{w\,x}{8\,d}$, where w = total load on half beam, and on central part, d = depth of girder, x = distance of point of contra-flexure from point of support = length of half beam. All that remains to be de-

termined is the value of x, which corresponds to a minimum area of the curve of strain.

The author then explained the process of finding x, which gives for a beam fixed at both ends, $0.25\,l$. And for a beam fixed at one end and supported at the other, $0.215\,l$.

In the case of a continuous girder, the values of the x's are assumed first as equivalent to one of the above quantities, and then reduced to give an equivalent of area over the points of support, whichever span such area is calculated from.

The author then proceeded to find the actual saving from the use of continuous girders, and from a calculation of numerous existent cases found that it sometimes amounted to 25 per cent. of the weight, averaging about 18 per cent.

These results were obtained from an empirical formula, for the weight of metal in a bridge, supposing single spans to be used, it is $\frac{b\ l^{2.25}}{10{,}000}$, giving the weight in tons, b = the breadth, and l = the span, both in feet, the quantity 2.25 being found from the expression

$$n = \frac{\log. w - \log. w' + \log. b' - \log. b}{\log. l - \log. l'},$$

in which w, b, l, w', b', l', are the weights, breadths, and spans for two cases; $n = 2.25$ was the mean result of solutions of the above equations. —*Proceedings Inst. Civil Engineers, Apr.* 10, 1862.

Interest and Dividends.

Holders of the second morigage bonds of the New York and Erie Railroad Company, extended to 1879, are notified that the interest due September 1, 1862, will be paid on that day on presentation of the proper coupons. It will be necessary for the holders of the bonds not thus extended to present them at the office of the company, where they can receive the principal and interest to September 1, 1862. The privilege of extending such bonds will cease at that date.

The Oswego and Syracuse Railroad Company have declared a semi-annual dividend of three per cent., payable on the 20th inst. New York stockholders will receive their payment from the transfer agent, H. A. Oakley, at the office of the Howard Insurance Company. Dividends not called for within thirty days can be collected at the Treasurer's office only, in Oswego.

The Naugatuck Railroad Company have declared a semi-annual dividend of two per cent., payable 15th instant.

The Pennsylvania Coal Company has declared a semi-annual dividend of 3½ per cent., payable on the 16th inst. The transfer book will be closed from the 13th to the 16th inst., both inclusive.

The Pacific Mail Steamship Company has declared a quarterly dividend of five per cent, payable August 22d. The transfer books will close on the 14th, and re-open on the 25th instant.

Horse Railways in Switzerland.

The horse railway from Geneva to Carouge, the first section of the lines of horse railways to be constructed in the Canton of Geneva, under the concession granted to Mr. Burn, C. E., was opened with the greatest success on June 19th. The opening of the line was celebrated by a local *fete* at Carouge, when 7,000 people were carried from Geneva and back. The fares on this line are the lowest ever attempted, and amount to a fraction more than three farthings per passenger per mile. This is the first line of horse railway that has been laid down on the continent on the American system. The rail used is a grooved rail of peculiar form, which presents no obstruction or inconvenience to the ordinary traffic of the roads.

FOREIGN TRADE OF NEW YORK.

Value of exports and imports and revenue from customs, at New York, for four years:

Years.	Exports.	Imports.	Customs Rev
1859	$106,443,600	$220,247,300	$34,899,800
1860	138,036,600	233,698,700	36,661,700
1861	150,386,500	224,394,200	28,223,100
1862	162,830,700	143,970,100	36,203,000

Value of exports, exclusive of specie, from New York to Foreign Ports for three fiscal years:

	1859-60.	1860-61.	1861-62.
First quarter	$17,637,200	$26,079,300	$30,075,900
Second quarter	18,733,800	33,845,200	31,917,800
Third quarter	20,727,100	33,477,700	32,075,600

" flax	421,291	52,125	547,689
Miscellaneous dry goods	740,867	38,981	290,165
Total entered for consumption	$11,793,585	$680,690	$5,020,782

Withdrawn from warehouse for consumption:

	1860.	1861.	1862.
Manufactures of wool	$488,655	$181,141	$467,852
" cotton	175,232	70,275	414,218
" silk	133,646	87,976	430,369
" flax	40,700	39,207	222,343
Miscellaneous dry goods	14,924	7,289	210,743
Total withd. from warehouse	$853,157	$385,738	$1,745,525
Add entered for consumption	11,793,585	680,690	5,029,782
Total on market	$12,646,742	$1,066,428	$6,775,307

Entered for warehousing:

	1860.	1861.	1862.
Manufactures of wool	$447,232	$401,282	$338,222
" cotton	178,703	151,547	36,664
" silk	182,427	202,510	165,447
" flax	75,029	9,912	29,008
Miscellaneous dry goods	30,237	30,847	28,891
Total warehouse entries	$913,628	$796,197	$598,232
Add consumption entries	11,793,585	680,690	5,029,782
Total entered at the port	$12,707,218	$1,476,887	$5,628,014

[From the Civ. Eng. and Arch. Jour., April, 1862.]

Description of the Loch Ken Viaduct, Portpatrick Railway.

By E. L. J. Blyth, *M. Inst. C. E.*

This viaduct was situated on a curve of half a mile radius, and carried a single line of railway over the loch at an oblique angle, so that the width of the water-way was increased from 265 feet to 360 feet, the depth of the water at the point of crossing being 29 feet in summer. It consisted of 7 openings—three of 130 feet each in the centre, spanned by wrought iron girders of the bow-and-string form; two semicircular arches of masonry, of 20 feet span, in the abutments; and two openings of 20 feet each at the ends, provided with flat cast iron girders. Owing to there being scarcely any current, it was not deemed necessary to set the piers in the line of the loch, but they were placed at right angles to the viaduct, and each pair of girders was at a slight angle to the adjacent ones.

The foundations consisted of strong gravel, except in the case of the east abutment of the main openings, where a running sand was met with, and in this instance the lower courses of the masonry were laid on a bed of hydraulic lime concrete 2 feet in thickness. The two deep water piers were each formed of two towers, 8 feet in diameter, placed 8 feet apart, and connected above the water level by semicircular arches of masonry. For each tower of the piers a cast iron tube 8 feet in diameter, in six pieces, was sunk, the tubes being 36 feet and 42 feet in length for the east and west piers respectively. When the masonry was brought up to the surface, the upper castings of the tubes were removed. Around the piers 4000 cubic yards of loose rubble stone were deposited, so as to produce an artificially deeper foundation. The tubes when placed in position, sank from 1 foot to 2 feet by their own weight, until they reached the gravel and sand, where they remained quite firm. This formed a good test of the sufficiency of the foundation, as the weight of the tubes on their narrow edges was equal to from 8 to 9½ tons per square foot, while the total weight on the foundations of the finished structure, including the moving load, was only about 6¼ tons per square foot.

The method adopted in sinking the tubes was that of ordinary well-sinking. Two plate-iron screw-pans, of an inverted cone shape, were employed; one 2 feet in diameter at the top and 1 foot deep, and the other was only used for the harder portions of the excavation, 1 foot in diameter at the top and 1 foot deep. There were openings in the sides, covered with leather flaps, to prevent the material from escaping when the pans were filled. Three arms of round iron projected through the sides of the pans, and, being connected to a long rod with a cross handle at the upper end, the screw pans were worked by four men, and when full were raised by tackle. The larger pan raised about 1 cubic foot of material each time, and the smaller one about one-fourth of that quantity. By these means the tubes were sunk in some instances as much as 18 inches in one day, the minimum being 2 inches per day in the case of the north tube of the west pier, where large boulder stones were encountered, rendering necessary the use of a screw pick. When the tubes had been lowered the desired depth, concrete was deposited within them, varying from 12 feet to 18 feet in depth in each tube. On this concrete, ashlar masonry was laid, the cordon course being of granite in large blocks, for receiving the ends of the girders, which rested on wrought iron plates, laid on thick sheets of vulcanized india-rubber to lessen the effect of vibration.

The bow-and-string girders were each 136 feet 8 inches in length, and were segmental in form, the rise being 17 feet 6 inches, so that the segment was almost identical with a catenary curve, or the true curve of equal pressure. The sections of the upper and the under booms were identical. They consisted of a main plate, 24 ins. broad and ¾ of an inch thick, and of two channel irons, each 8 ins. by 4 ins. in section and ½ an inch thick, placed at a distance of 8 inches apart, between and to which the struts and ties, of the same sec-

Of the foreign trade for the year ending 30th June, the part taken by New York was, in imports, 70.73 per cent., and of exports, 63.61 per cent., viz:

	Imports.	Exports.	Total Trade.
New York State	$237,402,726	$158,606,518	$396,009,244
Other States	98,247,427	90,738,395	188,985,822
Total United States	$335,650,153	$249,344,913	$584,995,066

The relative proportions between the State of New York and other States being as follows:

	Importations.	Exports.	Total Trade.
New York	70.73 per ct.	63.61 per ct.	67.61 per ct.
Other States	29.27 per ct.	36.39 per ct.	32.39 per ct
	100.	100.	100.

The imports from, and exports to, foreign countries, by each collection district of the State of New York, for the year ending 30th June, 1861, were as follows:

	Imports.	Exports.	Totals.
New York	$222,966,274	$150,691,451	$373,657,725
Oswego	5,864,130	2,351,160	8,215,290
Buffalo	2,573,322	642,992	3,216,304
Champlain	2,187,675	1,559,915	3,747,690
Niagara	1,900,271	2,594,818	4,495,089
Cape Vincent	753,113	320,112	1,073,225
Oswegatchie	675,917	198,183	874,100
Genesee	337,467	245,254	582,721
Sag Harbor	129,170	.....	129,170
Sackett's Harbor	15,387	2,643	18,030
New York State	$237,402,726	$158,606,518	$396,009,244
All others	68,247,427	90,738,395	188,985,822
Total U. S., 1860–61	$335,650,153	$249,344,913	$584,995,066

NEW YORK CANALS.

The quantity of flour, wheat, corn and barley left at tide-water, from the commencement of navigation to the 31st July, inclusive, during the years 1861 and 1862, was—

	Flour, bbls.	Wheat, bush.	Corn, bush.	Barley, bush.
1861	463,446	11,447,608	6,791,925	181,020
1862	701,515	11,834,939	7,570,633	373,091
Increase	238,069	387,331	775,708	192,071

By reducing the wheat to flour, the quantity of the latter left at tide-water this year, compared with the corresponding period last year, shows an increase of 355,535 bbls. flour.

The following comparative table shows the quantity of some of the principal articles of produce left at tide-water from the commencement of navigation to and including the 31st of July in the years indicated:

	1860.	1861.	1862.
Canal opened	April 25.	May 1.	May 1.
Flour, bbls	351,776	462,446	701,515
Wheat, bush	3,599,483	11,447,603	11,834,939
Corn, bush	6,455,432	6,794,925	7,579,633
Barley, bush	75,913	181,020	373,091
Oats, bush	3,294,874	2,244,548	1,650,385
Rye, bush	113,421	359,494	386,116
Beef, bbls.	4,511	332	11,250
Pork, bbls	5,825	3,397	119,587
Bacon, lbs	451,564	432,500	5,151,096
Butter, lbs	131,190	116,615	398,467
Lard, lbs	426,085	294,841	5,396,030
Cheese, lbs.	154,300	147,880	386,525

GRAIN TRADE OF BUFFALO.

The following is a comparative table of imports of grain into Buffalo, from the opening of navigation to August 1, in the years 1859, 1860 and 1861, and from January 1 to August 1 in 1862:

	Grain, bush.	Flour, bbls.	Total grain, including flour reduced to wheat.
1859	3,373,354	542,926	5,937,984
1860	9,695,863	388,003	11,635,878
1861	17,295,934	794,603	21,269,024
1862, 7 months	23,286,746	1,312,811	29,850,801

The canal exports of flour and grain from the opening of navigation May 1, to August 1 186 , will be shown by the following:

Flour, bbls	212,657	Oats	762,143
Wheat, bush	19,688,789	Barley	96,202
Corn, bush	9,020,364	Rye	349,192

The revenue from tolls collected at Buffalo is as follows:

May	$428,078 78	July	$443,055 30
June	407,505 05		
Total since opening, May 1			$1,278,639 13
Corresponding time in 1861			702,434 91
Corresponding time in 1860			442,344 74

tion of channel iron, were riveted. The transverse girders for carrying the roadway were 6 inches in depth at the ends where they rested on the channel irons of the under booms, and 15 inches deep in the centre. The middle web of these girders was ¼ of an inch in thickness, and there were angle-irons, three inches by three inches by half an inch in section, at the top of the web on each side. Every alternate girder projected 2 feet, from which T iron struts were carried up to the crossings of the diagonal bracing. The weight of the girders and roadway between the points of support was 88 tons, and of the ballast (2 inches in depth) 14 tons, making a total dead load of 102 tons; and taking the rolling load at 1 ton per lineal foot, the total load on one span would be 232 tons. The area of the upper boom was 33 inches, and of the under boom, exclusive of rivets, 27.04 inches. The distance between the centres of gravity of the upper and the under booms was 17.04 inches. The tensile strain on the under boom amounted to 4.04 tons per inch, and the compressive strain on the upper boom to 3.35 tons per inch. When the whole of the load was upon the girders there was no compressive strain on any of the diagonals, but there were tensile strains varying 3.4 tons to 7.5 tons, or equal respectively to 9 cwts. and 1 ton per square of section.

The author considered that the bow-and-string girder possessed advantages over the Warren or other lattice girders, with parallel top and bottom members; as in the latter class it was not possible to make the top and bottom members theoretically correct, without great labor and waste of material, and as owing to the great variation in the strains on the diagonals, it was necessary that they should be of varying dimensions, involving in some cases even different sections of iron.

The girders were built in position on staging, and the greatest amount of deflection of any one girder from its own weight was ⅜ths of an inch. Subsequently, when a locomotive engine, weighing 34 tons, was placed in the centre of each span, and afterwards was run over, first at 10 miles an hour, and then at 25 miles, the deflection amounted to from 3 16 to ¼ of an inch in each girder, there being no perceptible difference in either case. Finally when four engines were coupled together, so as to give a load equal to 1 ton per lineal foot, the deflection only amounted to from ½ to 5/8ths of an inch.

It was stated, that the total cost of this viadnct had amounted to about £13,000.—*Proc. Cir. Eng. Soc.*

Recent Organization of Railroad Companies in New York.

The following companies have been organized under the General Railroad Law of New York:

Albany Railroad Company		March 2, 1861
Brooklyn City and Ridgewood C'o		Feb. 1, 1861
Buffalo branch of Erie Railway Co.		June 13, 1861
Coney Island & Brooklyn R. R. Co.		Dec. 10, 1860
East New York and Jamaica	"	Nov. 22, 1860
East and North River	"	April 2, 1861
Erie Railway	"	June 25, 1861
Hudson and West Shore	"	Oct. 3, 1860
International	"	Feb. 15, 1861
New York	"	Jan. 11, 1861
New York and Lake Mahopac	"	Jan. 11, 1861
Port Morris and Westchester	"	April 2, 1861
Rome, Watertown and Ogdensburgh Railroad Co		July 10, 1862
Third Avenue & Fordham R. R. Co.		April 5, 1861
Utica and Black River	"	May 22, 1861
Van Brunt street & Erie Basin	"	Feb. 15, 1861

The articles of association of the Buffalo branch of the Erie Railroad have been filed; the portion of the Buffalo and New York City Railroad Company, lying between Attica and Hornellsville, having been sold under foreclosure of mortgage, on the 21st of March, a new company was formed under the name of the Buffalo Branch.

The Erie Railway Company was formed pursuant to chapter 169 of laws of 1860, and chapter 119 of laws of 1861—the New York and Erie Railroad having been sold under foreclosure of mortgage a new company was formed under that name.

Lehigh Canal.

Extract of a letter dated Manch Chunk, August 2, 1862, from the Superintendent and Engineer of the Lehigh Coal and Navigation Company: "We have now about 2,250 men employed on the repairs between Packer's Dam and Allentown. This is a larger force by about 300 men than we had between the same points before the turn-out. We have 230 men on the Deep Level and Lock No. 4, and 250 on the new Canal at Bowman's. By the end of next week we expect to increase the force at these points to 275 on the former, and to 350 on the latter. The water is, at this writing, lower than at any time since the flood, and the work throughout the line is progressing satisfactorily."—*Philadelphia Ledger, August 5.*

RAILS AT BOSTON.

400 TONS RAILS—50 lbs. per lineal yard—T pattern—now ready for delivery at Boston. For sale by

CHAS. L. PERKINS,
Or, E. LIVINGSTON,
2m30 54 Exchange Place.

CAR DUCK.

HEAVY 4-PLY FITCHBURG DUCK OF ALL WIDTHS, 9 to 10 inches. PLUSHES, BURLAPS, CAR HEAD LININGS, and all kinds of RAILROAD SUPPLIES.

For sale by

WILLIAMS & PAGE,
67 Water st., Boston.

QUARTZ MILLS

OF THE MOST APPROVED KIND,

MANUFACTURED BY **BURDON, HUBBARD & CO., 102** Front st., BROOKLYN, N. Y. Also Agents and manufacturers of the RUSS PATENT PREMIUM AMALGAMATORS, the best and simplest in use for saving both **fine** and **coarse** gold.

Messrs. MUNN & CO.,

PROPRIETORS OF THE SCIENTIFIC AMERICAN continue to solicit patents in the United States and all foreign countries, on the most reasonable terms. They also attend to various other departments of business pertaining to patents, such as Extensions, Appeals to United States Courts, Interferences, Opinions relative to Infringements, etc. The long experience Messrs. MUNN & CO. have had in preparing specifications and drawings, extending over a period of sixteen years, has rendered them perfectly conversant with the mode of doing business at the United States Patent Office, and with the greater part of the inventions which have been patented. Information concerning the patentability of inventions is freely given, without charge, on sending a model or drawing and description to this office.

Consultations may be had with the firm between 9 and 4 o'clock, daily, at their principal office, No. 37 Park Row, New York. We have also a branch office in the city of Washington, on the corner of F and 7th sts., opposite the United States Patent Office. This office is under the general superintendence of one of the firm, and is in daily communication with the principal office in New York, and personal attention will be given at the Patent Office to all such cases as may require it. Inventors and others who may visit Washington, having business in the Patent Offices, are cordially invited to call at their office.

MUNN & CO., are very extensively engaged in the preparation and securing of Patents in the various European countries. For the transaction of this business they have offices at Nos. 66 Chancery Lane, London, 29 Boulevard St. Martin, Paris, and 26 Rue des Speronniers, Brussels. Probably three-fourths of all the European Patents secured to American citizens are procured through this Agency.

A pamphlet of information concerning the proper course to be pursued in obtaining Patents, the requirements of the Patent Office, etc., may be had gratis upon application at the Principal Office, or either of the Branches. They also furnish a Circular of information about Foreign Patents.

During the last sixteen years the business of procuring Patents for new inventions in the United States, and all foreign countries has been conducted by Messrs. MUNN & CO., in connection with the publication of the SCIENTIFIC AMERICAN; and, as an evidence of the confidence reposed in them by the inventors throughout the country, we would state that we have acted as agents for more than FIFTEEN THOUSAND Inventors! In fact, they have become identified with the whole brotherhood of Inventors and Patentees, at home and abroad. We would state that we never had a more efficient corps of Draftsmen and Specification Writers than are employed at present in our extensive Offices, and we are prepared to attend to Patent business of all kinds, in the quickest time and on the most liberal terms.

Communications and remittances should be addressed to

MUNN & CO.,
Publishers, No. 37 Park Row, New York

THE NEW YORK CENTRAL RAILROAD COMPANY,
TREASURER'S OFFICE, ALBANY, July 19, 1862.

EIGHTEENTH SEMI-ANNUAL DIVIDEND.—The Directors of this Company have declared a Semi-annual Dividend of Three per cent. on the Capital Stock thereof,—free of the United States Income Tax, which will also be paid by the Company—payable on the 20th day of August next, upon stock registered at New York, Boston and Albany, and on the 20th day of September next upon stock registered at London.

Stockholders whose stock is registered at New York, will receive their Dividends at the office of DUNCAN, SHERMAN & CO.; those whose stock is registered at Boston, at the office of J. E. THAYER & BROTHER; those whose stock is registered at Albany, at the ALBANY CITY BANK; those whose stock is registered at London, at the UNION BANK OF LONDON, the latter at the rate of 4s. 1d. to the dollar.

The Transfer Books will be closed at the close of business on Thursday, the 31st day of July inst., and will be re-opened at New York, Albany and Boston on the morning of Saturday, the 23d day of August next.

8t30 JOHN V. L. PRUYN, Treasurer.

CUMBERLAND COAL.

THE BORDEN MINING COMPANY

ARE now prepared to fill orders and to make contracts for the season of 1862, for **CUMBERLAND COAL,** DELIVERABLE ON BOARD VESSEL AT **Baltimore, Md., Alexandria, Va.,** or **Georgetown, D. C.** Purchasers may rely upon the Coal proving equal in quality to that heretofore furnished.

The Company also have the pleasure of announcing that they have completed, after two years' labor, their shaft and machinery upon their new property in the VALLEY OF GEORGES CREEK, and are lifting from the very heart of the Coal Basin a superior and perfect article of **BITUMINOUS COAL,** remarkably free from impurities of every description, and possessing qualities peculiarly adapting it to Locomotive use, and to generating steam under all circumstances. This Coal will be known in market as **"BORDEN'S PIT COAL."**

Our Railroad friends, and others requiring a superior Coal, will find it to their interest to give this a trial before contracting elsewhere.

For prices and other information apply to

WILLIAM BORDEN.

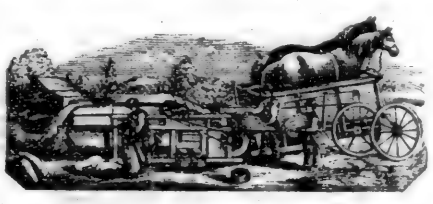
IMPORTANT
TO
RAILROAD COMPANIES.

THE ATTENTION OF
RAILROAD MANAGERS
Is called especially to the Machines manufactured especially for the use of Railroad Companies by the proprietors of the
ALBANY AGRICULTURAL WORKS,
CONSISTING OF
EMERY'S PATENT
Railway Horse Power,

Made changeable for both right and left hand work, also with changeable degrees of forces and motions of the driving Pullies without changing the Speed and Labor of the Horses, thereby adapting them to the different uses required, as Sawing Wood, Pumping Water, Driving Elevators and Machine Shops, Foundries, etc. The Power is also adjustable to any degree of wear or use, so as to always ensure its working with its greatest efficiency. All the running chains in these Powers are made of the best MALLEABLE IRON which gives to them triple the strength and durability of Grey Iron which last is universally used by all other Railway Horse Power Manufacturers—thereby at the same time lessening the weight of these several hundred pounds, making them less cumbrous for handling and transportation.

WOOD SAWING MILLS.



These Sawing Mills are made upon the most approved and convenient plans in use. Having a heavy plate fly wheel fixed to the Mandrill with a Ratchet or catch pulley for the driving band on the outside of the fly-wheel—the journal bearings are fitted with Babbet Metal—the wood carriage traverses on iron ways and gibbs—a 24 or 26 inch Saw is fitted, filed and set in working order and the plates warranted. When desired, a 11 inch saw is fitted, also a table for the purpose of slitting boards, etc., for fencing and carpenter work.

The whole together forming one of the most complete and desirable sets of machines for their purposes. They are already in very general use on nearly all the principal Railroads in this country.

PRICE,	ONE HORSE POWER	$90.00
"	TWO " "	120.00
"	SAW MILL, 24 in. Saw	37.00
	SETT BANDS and EXTRAS	5.00

PUMPING ENGINES

Of different kinds for Raising Water for Railroad tanks and other purposes, can be furnished on demand with Reciprocating or Rotary Pumps—fitted to be operated by these Horse Power and the best adapted for Railroad and Mining purposes. One of the SEVENTY-FIVE DOLLAR PUMPING ENGINES when driven by the TWO HORSE POWER has a capacity equal to any Four or Five Horse Power Steam Engine and Pumping Machine for the same purposes.

THRESHING MACHINES

Of the most approved kinds, for one and two horses and with simply Separators, or with Complete Cleaners which fit the grain for market in one and the same operations, and of the most approved construction.

They are very extensively introduced into all the grain-growing sections of this country and the world. They are especially adapted to the force of the above Horse Powers and can be driven by Steam or Water power with equal advantage. They will be furnished on the most liberal terms and warranty.

Liberal discounts made to RAILROAD COMPANIES from the above prices, and agents solicited for the sale of their manufactures.

For further particulars see the new Illustrated and Price Catalogue of the ALBANY AGRICULTURAL WORKS, furnished gratis on application to the proprietors.

THE GREAT FIRE IN TROY.

Unparalleled Triumph
OF
LILLIE'S SAFES!

The following certificates explain themselves:

TROY CITY BANK, May 21, 1862.

LEWIS LILLIE, Esq.—Dear Sir: I am sure it will give you as much pleasure to know as it does me to say, that in the recent fire of the 10th inst., which desolated our city and destroyed our Banking-house, the contents of our Bank vault, though the building itself was a heap of ruins, remained entirely unharmed. This result we attribute entirely to the fact that our old Wrought Iron Doors were, about two years since, exchanged for a set of your celebrated Chilled and Wrought Iron Doors and Frames. With the old doors, not a book or paper in the Vault could have been saved; as it is, nothing in it was even damaged, though exposed to the most intense heat.

Yours, respectfully, S. K. STOW, Cashier.

TROY, N. Y., May 14, 1862.

The undersigned, using **Lillie's Chilled and Wrought Iron Fire and Burglar Proof Safes,** at the time of the late disastrous fire in this city, would state that our safes were subjected to a severe test by fire, the heat varying in intensity, according to the locality and surroundings. The time they were exposed to the fiery ordeal, unprotected by water, varied from 24 to 72 hours. We would say that our money, papers, books, etc. were well preserved, and the Safes are suitable for further use. By comparison with Safes of other manufacture, equally exposed, we have no hesitancy in recommending Safes of Lillie's manufacture to the public on their demonstrated merit as entitled to unparalleled confidence as fire-proofs.

Jonathan Seaman.

Not dug out—nothing in them.

TROY, May 19, 1862.

The undersigned had one of **Lillie's Wrought and Chilled Iron Safes,** which went through the fire of the 10th of May. The Safe was exposed to a severe fire for over 24 hours. In falling it turned on its face, and when turned up to open the doors was red-hot. The back of the lower part of the Safe (behind the books) was filled with pennies, which, in falling over, pressed against the books, and brought them directly in contact with the doors. The wrappers on the pennies were mostly good. The books were unfit for further use, but the writing on them was partially legible and could be copied.

DUSENBURY & ANTHONY.

TROY, May 19, 1862.

This is to certify that we had in our store, in this city, when it burned, one of **Lillie's Small Safes,** which was in the fire, without water on the building or Safe. Most of the valuables were removed before the fire, and therefore we were not in haste to get the Safe out of the burning ruins. Some of the papers left in the Safe were legible when taken out, but most of them were charred.

I. M. SINGER & CO.,
Per G. W. BABCOCK, Agent.

This is to certify that the undersigned had one of LILLIE'S Patent Chilled Iron Safes in their store, which was burned during the late severe fire in this city, and we are happy to state, the Safe preserved all its contents in first-rate condition. All the papers were legible, and the books will do for further use, without even rebinding.

GRANT, NUTTING & CO.

The foregoing comprises all the Safes of my manufacture that were in the fire, and below will be found certificates from all the owners of Safes manufactured several years since, by World's Safe Company, who used my Patent Chilled Iron Shell, but not my Fire-Proof Cement.

WORLD'S SAFE COMPANY'S SAFES.

TROY, May 19, 1862.

The undersigned, having Safes manufactured by the late World's Safe Company, and which were subjected to the great fire of the 10th inst., in this city, would state that our Safes were exposed to a severe heat, being confined in the burning ruins, unprotected by water, from one to three days. On opening the Safes the contents were mostly legible, and to a far greater extent than could be reasonably expected of any Safe. We concur in the opinion that the Safes manufactured by LEWIS LILLIE, which were subjected to the fire for a longer time and preserved their contents, are superior and powerful protectors against fire, and by this test we are prepared to recommend them as such to public patronage.

Lyman Bennett,
Flood & Dunham,
John Hutchinson,
Silliman, Matthews & Co.,
E. L. Mallory,
E. H. Virgil,
Sup't National Express Co.

The undersigned, having Safes manufactured by the late World's Safe Company, and which were subjected to the great fire in this city, would state, that on opening our Safes the contents were mostly legible. We concur in the opinion that the Safes manufactured by LEWIS LILLIE, which were subjected to the fire for a longer time and preserved their contents, are superior and powerful protectives against fire, and we are happy to recommend them to public patronage.

W. & L. E. GURLEY,
R. L. & G. DRAKE,
LEONARD SMITH,
H. E. & W. ALENDORPH, Absent.

TROY, May 19, 1862.

To whom it may concern: We wou'd certify that when the recent fire broke out in this city, we took out from our Safe (which was made by World's Safe Company) all our books, papers, etc., and then left it to the flames without shutting the door, and the Safe will do for further use by being repaired, although the book case was destroyed by the door being left open through the fire.

ACKLEY & CO.

TROY, May 19, 1862.

The undersigned, using Safes manufactured by the World's Safe Company, at the time of the late disastrous fire on the 10th instant, in this city, would state that our Safes were filled with fire-brick for the fire-proof, and while several of this class preserved their contents, ours were considerably charred, and only part legible. In justice to Mr. LEWIS LILLIE, we are pleased to state that Safes of his manufacture proved to be powerful protectors against fire, and have preserved their contents, after having been exposed to the fiery ordeal, unprotected by water, from one to three days.

Stephen Holton,
Bennett, Strickland & Fellows,
Corless & House,
Luther Greenman,
E. W. Johnson,
J. H. Goodsell.

TROY, N. Y., May 17, 1862.

LEWIS LILLIE—Dear Sir: We were using at the time of the late severe fire of 10th inst., a Safe purchased in 1852 of the late World's Safe Company. The contents were considerably charred, but our Ledger is mostly legible, and we are able to copy it.

The Safe was subjected to a severe heat for over eighteen hours, and we are satisfied that if water had been thrown on the ruins, as is ordinarily the case, the contents would have come out uninjured. You will please repair our Safe, placing in it the improvements embraced in Safes of your manufacture, and oblige

SHELDON & GREENE.

N.B.—The above Safe is believed to have damaged the contents more than any of those named in this circular.

There were only seven Sheet Iron Safes, made by Herring and others, outside of the railroad depot, that were exposed to the fire, four of which were entirely burnt out; the fifth was saved by being early cooled off by water; the remaining two were not severely tested.

LEWIS LILLIE.

Caboose Passengers--Accidents to--Companies liable for.

WHERE THERE IS NO APPARENT CAUSE FOR AN ACCIDENT IT IS A REASONABLE PRESUMPTION THAT IT ARISES FROM THE COMPANY'S NEGLIGENCE. WHEN A PASSENGER HAS A RIGHT TO LEAVE A TRAIN AND RESUME HIS JOURNEY UPON AN OTHER.

This action was brought by one Edgerton against the New York and Harlem Railroad Company to recover damages for personal injuries sustained by him while traveling in a caboose car upon that company's road, on the 29th of Feb'ry, 1859. As the train entered the village of Chatham Four Corners, and whi[illegible] plaintiff was seated in the after part of the [illegible]nd near the middle of it, the rear truck o[illegible] ran off the track; the car was twisted a[illegible]oken in two, the after part of it smashed in pieces, and the plaintiff thereby thrown from it, among the wreck of the car, receiving severe injuries. The defendants were in the habit of carrying passengers in this caboose car at regular and fixed rates of fare, the same rates as in passenger trains, and other passengers were in the car at the time of the accident. The train was going as the conductor stated from five to six miles an hour; as the engineer stated from five to eight miles an hour. The car was an old one, and a wagon maker testified that the timbers "were not strong, and were insufficient for the business." There was no explanation whatever offered for the cause of the accident; and the engineer testified that the cause was unknown to him. The plaintiff had paid his fare from New York to Albany, and taken a ticket at the office of the company. He left New York in one of the ordinary passenger trains, in which he rode to Hillsdale. On this train he gave up his ticket, and received a check from the conductor in exchange. He remained at Hillsdale on Sunday, and on Monday morning got upon this train, which was a freight train with no passenger car attached, except what is called a "caboose car," nto which the plaintiff got.

At the close of the testimony the action and complaint was dismissed upon the ground that negligence on the part of the plaintiff contributed to the injury, and that no negligence upon the part of the defendants was shown. The plaintiff then appealed to the Orange General Term of the New York Supreme Court. The following opinion was rendered, reversing the judgment of the court below, and ordering a new trial.

EMOTT, J.—There was some objection to recognizing his (the plaintiff's) right to be carried without paying fare upon the ticket or check which he had received in the other train, and his fare was at first demanded and paid. Subsequently the conductor returned him the money, and allowed him to ride in the train by virtue of his ticket. There was, however, no objection made to his getting on the train or being carried in it, at all. The only question was whether his ticket was good for that train, or whether he should be compelled to pay fare over again from Hillsdale to Chatham, or to Albany. That was a question which the company no doubt might have decided by any reasonable regulation, which they saw fit to make and publish upon the subject.

They were not bound to issue tickets which should be good for all their trains. They might restrict their tickets in terms to one train, or one day only. But after receiving a passenger on a train upon which other persons were carried for hire, demanding fare from him, then returning it and recognizing his ticket as evidence of a contract authorizing him to be carried without further charge, it is too late for the company to say that he was wrongfully there, or was guilty of any fault in leaving the ordinary passenger train and embarking upon this freight train. The allegation that the plaintiff was guilty of negligence in taking a seat in a freight car is at least equally inadmissible.

It was said that this was contrary to the rules of the company; but I do not perceive any evidence to that purpose, while the fact that passengers are transported by the company in this kind of conveyance, that the plaintiff was carried on board with others and fare demanded of him, and only returned because it had been already paid at the company's office, go directly to the contrary conclusion. This car was the means and the only means of transportation offered by the defendants on this train. The plaintiff might have supposed that it would be over-uncomfortable; but I am not aware of any reason why he should have believed it to be an unsafe method of travel. The defendants placed it upon their road, used it to convey persons, received compensation from those who rode in it, and from the plaintiff among others. It does not lie in their mouths to say that it was so manifestly dangerous that the plaintiff was guilty of negligence in getting into it to ride. There is nothing in the conduct of the plaintiff to prevent his recovering for his injuries, if these were sustained in consequence of any fault or misconduct of the defendants.

After all the evidence was in, the Judge before whom the cause was tried non-suited the plaintiff, no doubt because in his opinion such fault or misconduct was not shown. It appeared that when approaching Chatham, the car in which the plaintiff was riding, and which was the last car of the train, ran off the track, was dashed against a freight car which was standing upon the adjoining track, and broken in pieces, and the plaintiff was injured by the collision. There was some contrariety of evidence as to the rate of speed of the train at the time, but the weight of evidence undoubtedly is that it was going at very slow speed. At the place where it occurred, the track of the Hudson and Berkshire railroad crossed the

defendants' road, using what is known as a frog, at the passage of the rails. Whether the car was made to leave the track by any imperfection in this frog, or what was the cause of the occurrence, is left in doubt. There must have been some cause for such a result. It is not an incident to the ordinary motion of a properly constructed car upon a properly constructed road, that it should jump off the track and be broken in pieces, either according to the laws of mechanics or the rules of a carriers' duty. At least it was a question for the jury whether a vehicle would be overturned in such a way, without some assignable cause in itself, or in the track. There was some evidence tending to show that the immediate and entire disruption and distension of the car was occasioned by the feebleness of its materials, and it was a fair inference that the plaintiff's injuries were aggravated, if not occasioned, by its breaking to pieces as it did.

It will be observed that the testimony on both sides was concluded before the complaint was dismissed. The case does not, therefore, present precisely a question as to what the presumption should be, or where the burden of proof should fall, to establish negligence in such a case. The question is whether upon the whole case the jury would have been bound to find that the occurrence took place without any fault or negligence of the defendants in the construction or use of their road or their cars.

It is an elementary principle in regard to the duty and responsibility of carriers of passengers, that they are bound to carry safely those whom they undertake to carry, as far as human care and foresight will go. Where an injury is sustained by a passenger in consequence of anything in the construction or management of the vehicle or the machinery of transportation, the carrier is responsible, if any exercise of care or foresight would have prevented it. In the case at bar no evidence was given by the defendants, to explain the occurrence or show its occasion; nor was there any evidence of the exercise of any skill, or foresight or precaution in the preparation or examination of the vehicle or the track, except the very slight evidence of the belief of the conductor and the engine driver on the train, that they were in good order, and the fact that no accident had hitherto occurred to that car, or at that place. The responsibility of a railroad company extends to all the means employed in transportation. Not only the motive power and the vehicle, but the track upon which they run, are prepared and provided by them, and are in their exclusive control and charge. When a collision occurs, or a vehicle is overturned or destroyed, they are at least better able than any one else to explain how it took place. I do not say a presumption necessarily arises from the fact that the railroad company do not explain or account for such an occurrence, that they are to blame. That is not necessary at present. But when it is proved that a car running at a very moderate speed went off the track, and coming in collision with a stationary object, was dashed in pieces and destroyed, it is not an unjustifiable or an unreasonable inference that this was occasioned by some defect in the construction of the car or road, or both. It was for the defendants in the present case to show that they had used every means which skill and prudence could dictate, to see that their road was in perfect order, and their cars constructed of the best materials, and in the most approved manner. Upon such evidence it would be for the jury to say whether the overturn of the car was unavoidable by human skill, or whether if due precaution had been taken it would have occurred; and whether if the car had been properly built it would have been destroyed as it was, and the plaintiff thus seriously injured, even if it had left the track. When no cause is directly or positively assigned by the evidence for such an occurrence as that by which the plaintiff was injured, we are not required nor allowed to presume that it inevitable. It is a more legitimate inference that it was occasioned by some defect in the vehicle or track. Whether that defect could have been discovered and remedied, was a question for a jury. We are of opinion that this case should have been left to the jury, under proper instructions. The nonsuit was erroneously granted and it must be set aside and a new trial ordered.

Subsequently a new trial was had in this case, and a verdict rendered by the jury awarding the plaintiff $4,500 damages. A motion was made for a new trial by the company which motion was denied by a Special Term; and this judgment was affirmed by the General Term, which held that a company cannot escape liability because the passenger was transported in a freight train and in a car not especially constructed to carry passengers, where it appears that he was so carried with the knowledge and consent of the company: notwithstanding the 40th section of the general railroad law; when there is no proof that there were any printed regulations of the company posted up in the train, and there were no passenger cars attached.

Our City Passenger Railroads.

The City Avenue Railroad Stocks continue in high favor, and most of them are scarce on the market. The Third, Sixth and Eighth stocks are largely above par, and quoted as follows:

Third-avenue Railroad Shares.....180 per cent.
Sixth-avenue Railroad Shares.....135 "
Eighth-avenue Railroad Shares.....150 "

The shares of the Second-avenue have ruled below par, say 70 *a* 80 per cent., owing to the temporary suspension of quarterly dividends last year from the general depression on the breaking out of the war; but these, it is expected will soon be resumed, after placing the equipment and station property of the road in the most complete condition. The capital is $650,000. The Funded Debt is $450,000. The finances of the concern are rapidly taking shape for steady quarterly dividends hereafter, like the other Avenue roads, and the traffic daily improving to a point which will justify liberal returns upon the Stock, besides the prompt payment of interest upon the mortgages.

New Railroad System of M. L. D. Girard—Sliding Cars.

This new method, which is said to have attracted the attention and excited the astonishment of the Emperor, so that he condescended to take a ride on the modal road 40 yards long; and which is, of course, occupying the attention of all journals, appears to consist in this: The cars are supported upon hollow sleigh-runners, from which water is forced under a pressure sufficient to lift the weight almost entirely off the rails: the escaping water moreover lubricating the rail. A water turbine is the mode of propulsion suggested, but it is not precisely stated that this was the mode used in the *immortal* experiment. M. Girard says that his last experiments gave a friction of 4.3 kil. (9.48 lbs.) per ton (about 1.236); while, so soon as the water was shut off the friction rose to 550 kil. (1102.37 lbs.) (about ½). Now, according to Gen. Morin's experiments, the friction with water as a lubric is about ¼. It appears, therefore, that the hydraulic pressure was sufficient to lift 59-60ths of the weight. Make the calculation for an ordinary railroad train, freight or passengers, and see what is the practical value of this "*most important discovery.*"—*Journal of the Franklin Institute.*

Terre Haute and Richmond Railroad.

This company was chartered on the 6th of January, 1847, with authority to construct a railroad from "some point on the western line of the State of Indiana, through Terre Haute, Greencastle and Indianapolis, to Richmond in the county of Wayne." The capital was fixed by the charter at $800,000, in $50 shares, but might be increased at the discretion of the directory. By subsequent arrangement the portion of the line east of Indianapolis was abandoned, and constructed by the Indiana Central Railroad Company. On the 20th December, 1848, the first division of the road, extending from Terre Haute to Greenville, 20 miles, was put under contract. The second division of 20 miles from Indianapolis was commenced on the 20th December, 1849, and the intermediate division on the 10th May, 1850. Track laying was commenced at both ends of the line in the fall of 1851, and on the 16th February, 1852, the road was so far completed as to permit of the passage of trains and was fully opened during the ensuing spring. By resolution of the directors in 1855, the construction account was closed and since that time all improvements and additions to equipment have been charged against income.

The road is 73 miles in length extending from Terre Haute to Indianapolis, Indiana. The equipment consists of 18 locomotives; 17 passenger, 6 baggage, 103 freight, 30 stock, 71 coal, 48 platform, 37 gravel ond 13 hand cars.

Capital stock authorized *ad libitum*, in $50 shares—paid in $1,381,450, on 27,629 shares.

Funded debt, $230,000, described as follows:

1st mortgage 7 per cent. coupon bonds (convertible), $230,000—issued 1st March, 1851, and payable, principal 1st March, 1866, and coupons semi-annually 1st March and 1st September, in New York. Total issue $600,000, of which $370,000 has been converted into stock.

Floating debt—none.

Cost of road and equipment, $1,611,450—no detail. This amount includes the investment of $25,641 in the Union track and depot at Indianapolis.

The Suez Canal.

According to accounts received from Mr. D. A. Lange, the Suez Canal works continue to be pushed with vigor. The breakwater at Port Said, which presented some difficulties, is now completed, and vessels are able to discharge their cargoes in all weathers. The jetty is being continued. Between the break-water and the shore there remains about 1,800 yards to fill up, and the cargoes of large stone blocks daily sunk in the sea from the quarries at Mex are sensibly diminishing this distance. On land the progress in excavating the canal is alleged to be greater than is generally imagined. 25,000 men are engaged along the line, and the average quantity of earth removed is 550,000 cubic yards per month. It is expected, therefore, that the works will soon be sufficiently advanced to allow the waters of the Mediterranean to flow into the basin of Lake Timsah. Meanwhile a town is being constructed at Timsah, and workmen are employed in laying down the foundations for the quays intended for vessels to load and unload. The inland port of Timsah is to serve as a coaling and watering station for vessels passing through the canal, also for re-victualling, repairing, and careening. The stores along the different stations contain sufficient provisions to feed 50,000 men. Lately a regular direct line of steamers has been organized between Alexandria, Port Said, and Marseilles. The first trial took place on the 22nd of June, by the steamer Bizantin, and she unloaded 150 tons of merchandise at Port Said in 12 hours, although the weather was boisterous.—*London Times.*

Horse Railroads.

The Wason Manufacturing Company of Springfield, Mass., have contracted to furnish seven cars for the line of horse railroad between Hartford and Wethersfield. The length of the road is about four and a half miles, commencing at a point near the Spring Grove Cemetery, Hartford, and terminating at the Congregational Church in Wethersfield. The contract for the construction of the line has been made, we understand, with a

Mr. Munson, of New Haven. A vigorous effort will be made to have the road completed and in running order by the 1st of October.

Freight Tariffs and Classifications.

A number of engineers and others connected with railroads in Cuba and South America have recently applied to us for information on the charges for, and classification of, freight adopted on our leading lines. Railroading is now so completely a matter of experience, and the system of the North and West is so consolidated through agreements made by their managers, that the differences in point of classifying freight are unimportant. We subjoin that of the New York Central as a sample. Spirits of turpentine, burning fluid and varnish are taken only at the owner's risk. Gunpowder, friction matches will not be received for transportation at all.

FIRST CLASS.

Agricultural Implements, by special contract.
Bath Tubs.
Baskets, twice first class rates. Books.
Batting, Blinds, Bonnets.
Boots and Shoes, Bread, Buffalo Robes.
Brushes and Brooms, Broom Corn pressed.
Billiard Tables boxed, owner's risk.
Bird Cages, boxed, twice first class rates.
China Ware, in boxes.
Carriages, well boxed, twice first class rates, owner's risk.
Cabinet Ware, set up and boxed, twice first class rates.
Cabinet Ware, knocked down, and well boxed, first class rates.
Cards, Carpeting, Corks, Confectionery.
Chairs, boxed, twice first class rates,
Cigars, boxed and strapped.
Cassia in mats, Caps.
Cotton Waste.
Covers and Seives, Clocks and Weights.
Demijohns, owner's risk, twice first class rates.
Dry Goods, in boxes, bales and trunks.
Empty Barrels.
Furniture, set up and boxed, twice first class rates.
Furniture, knocked down, well boxed, first class rates.
Furnitnre, not boxed, only taken by special contract.
Furniture, second-hand, well boxed, accompanied by passengers.
Farm Wagons, in pieces. Fire Crackers.
Feathers, Furs. Figs, in drums.
Fish, (fresh) prepaid.
Garden Seed, Glass Ware, Window Glass.
Grapes, in kegs.
Hides, (dry) loose.
Household Goods, (not Furnitnre) well boxed.
Hair, in sacks. Hats and Caps.
Ink, in glass.
Indigo, India Rubber Goods.
Iron Castings, light, loose, under 300 lbs. each piece.
Leather, loose, Liquors, in glass.
Lemons, sacked.
Looking Glasses boxed, owner's risk breakage.
Machinery, unboxed. Metallic Coffins.
Marble, manufactured, owner's risk.
Mattresses, twice first class rates.
Mouldings and Picture Frames.
Mats and Rugs.
Measures and Tubs, Moss, in sacks.
Musical Instruments.
Mineral Water, in glass.
Nuts, in single sacks.
Oysters, in kegs and cans (fresh).
Oranges, sacked. Oil, in glass.
Paper Hangings, not boxed.
Pickles and Preserves in glass.
Pill Boxes, in casks or boxes, twice first class rates.
Palm Leaves, Peltries, Printing Presses.
Piano Fortes, owner's risk.
Porter and Ale in glass,
Paintings and Pictures, well boxed.
Plate Glass, (owner's risk breakage).
Printed Matter in sheets, boxed.
Quicksilver, in iron flasks.
Rattan, Russia Bristles.
Refrigerators.
Steam Boilers, 30 feet and under.
Sleighs, boxed, twice first class rates.
Snuff in jars. Sewing Machines, boxed.
Steam Boilers, over 30 feet, 1½ first class rates.
Scythe Snaths, Scales and Scale Beams, not boxed.
Stoves, owner's risk.
Sweet Potatoes, Sizing, Stove Pipe.
Stove Plates, owner's risk, Stationery.
Traveling Bags.
Trunks—Tin Ware, boxed, Twine.
Trees and Shrubbery, boxed, owner's risk.
Trees and Shrubbery, baled, 1½ first class rates, owner's risk.
Toys, boxed, 1½ first class rates.
Umbrellas, Veneering, not boxed.
Wagons, children's, not boxed, twice first class rates.
Wagons and Hobby Horses, knocked down, in boxes and crates.
Wagons and Hobby Horses, boxed, 1½ first class rates.
Wax, Wine, in boxes or baskets.
Whips—Whalebone, Wheelbarrows.
Wooden Ware, Wagon Felloes and Bows.
Willow Ware, twice first class rates.
Woolen Yarn. Wadding. Wire Cloth.

SECOND CLASS.

Antimony, crude. Apples, dried.
Baking Powders, Bed Cord, Bags, Bells.
Bagging. Bottles. Beeswax Butter.
Boiler Felting.
Brimstone, boxes or kegs.
Burlaps, Berries. Blue Vitriol.
Candles. Cotton Yarn. Cocoa Matting.
Cast Iron Grain Mills. Carpet Lining.
Caster Oil in cans or cases.
Copper and Brass Vessels, in boxes or casks.
Cream Tartar in boxes or kegs. Cocoa.
Coffee, ground, in boxes or barrels.
Capstans, Cassia, in bags or boxes.
Clove Stems, in sacks. Chocolate.
Cotton Waste, pressed in bales.
Copper, in plates, sheets, bolts, pigs, wire, nails and rods.
Camphene, Varnish and Burning Fluid owner's risk leakage.
Cheese, in boxes and casks.
Caloric Engines.
Clover and Grass Seed. Copper Bottoms.
Crockery, in boxes or barrels.
Congress and Bedford water, in boxes or barrels.
Chain, cotton, woolen and hempen.
Cutlery, Chair Stuff, in rough.
Domestic Sheeting, Shirting, Ticking, and Denims, in original bales.
Drugs and Medicines.
Dye Woods, in bags or barrels.
Duck, Deer Skins, pressed.
Emery. Extract Logwood.
Flax Seed, Flax, boxed.
Gas Fixtures, boxed.
Ginger, Glue, Gum Copal.
Groceries, assorted, not otherwise specified.
Grass and Clover Seed.
Guns, Rifles and other firearms.
Hair, pressed.
Hemp and Shingle Machines.
Hides, dry, in bales, Honey, Hops.
Hemp Carpet. Hollow Ware.
Herrings, in boxes, Hemp, boxed.
Isinglass.
Iron, hoop and sheet. Ink, in casks.
Leather, in rolls and boxes.
Liquor, in wood.
Lead, in pipe, bar and sheet.
Lamp Black, in casks or bbls. Linseed.
Licorice, stick or root.
Lithographic Stones, owner's risk.
Machinery boxed.
Mustard Seed, in bags or casks.
Moss, pressed in bales.
Nuts, in double sacks, casks or bbls.
Oakum, Oil Cloth.
Plumber's Materials, in boxes or casks.
Porcelain Ware, in barrels or boxes.
Paints, in boxes and cans, not otherwise specified.
Palm Leaf, pressed. Prunes, in casks.
Printer's Ink, in kegs or barrels.
Paper, in boxes, Paste Board.
Printing Paper, Peaches, dried.
Paper Hangings, in boxes. Pipes.
Pins, in original boxes.
Rubber Car Springs, loose.
Rubber Packing and Hose.
Raisins, strapped. Rags, in sacks.
Saddlery, Scythes, Stove Blacking.
Sardines, in boxes, Shoe Pegs, in bbls.
Sheep and other Skins, in bales.
Shot in bags—Sugar, in bags.
Scales and Scale Beams, boxed.
Seeds, not otherwise specified.
Snuff in casks, bbls. or boxes.
Soap, Castle and fancy.
Starch in less than 100 boxes.
Shingle Machines.
Tobacco, in bales.
Tobacco, cut, in barrels or boxes.
Tow, boxed, Type, Tea.
Veneering, boxed.
Wood, in shapes. Wrapping Paper.
Willow Reeds, in bundles. Wool.
Yarn Carpet, pressed in bales.
Zinc, in rolls and sheets.

THIRD CLASS.

Axes. Anvils, Ale and Beer, in wood.
Black Lead, in bbls. or boxes, Boiler Flues.
Brass and Pewter Faucets. Barilla. Bones.
Bark and Cob Mills. Binders' Boards.
Cotton, square bales. Chain, loose.
Cider, in barrels or hhds. Coffee Mills.
Copper, in boxes and casks. Copying Presses.
Carriage Springs, Axles and Boxes.
Cream Tartar, in bbls. and hhds. Crucibles.
China Ware, in casks. Currants dried.
Dye Woods, in sticks. Dates.
Epsom Salts, in barrels.
Figs in casks or boxes.
Forks, hay and manure.
Gum Shellac, original packages.
Hardware, Hooks and Hinges.
Hoofs and Horns, Hides, green. Hoes.
Herrings, in kegs.
Iron Castings, in boxes.
Iron Safes, Iron Railing. Iron Facings.
Iron Shutters. Junk, Jute.
Lead, in casks or pig. Lime, in casks.
Lightning Rods, in bundles.
Madder, in hhds. Millstones, finished.
Marbles, in casks or boxes. Manilla.
Mahogany, in board, plank, or scantling.
Nails and Tacks, in boxes. Nails, in bags.
Oysters, kegs and cans, pickled.
Porcelain Ware, in casks or hhds.
Pickles and Preserves, in cans.
Pepper and Spices, in bags.
Pumice Stone, in cks. Rubber Belting.
Rubber Car Springs, in boxes or casks.
Spelter, Shot, in kegs. Sand Paper.
School Slates, boxed. Split Peas.
Shovels, Spades and Scythes, in boxes.
Scythe Stones. Shoe Blacking, in bbls.
Tin Foil in boxes.
Vinegar. Wire Fencing.
Wood Screws, in casks or boxes.
Wire, not otherwise specified.

FOURTH CLASS.

Axle Grease. Anchors.
Alum, in barrels and hogsheads.
Bleaching Salts, Burr Blocks. Barytes.
Brimstone, in bbls or hhds. Bath Brick.
Borax, in barrels or boxes. Barley.
Coffee, in double sacks. Chain Cable.
Coffee, single sack, owner's risk. Clay.
Chain, in casks, Cements, Chalk.
Car Wheels and Car Axles, Chickory.
Crockery, in crates and hogsheads.

Copperas, in bbls. or boxes.
Earthen and Stone Ware, in crates and hogsheads. Earth Paints.
Fish, pickled and dry salted. Fence Wire.
Guano. Grindstones.
Gambia, in bags or casks. Gas Pipe.
Gunny Bags, in bales.
Honey, in casks or barrels.
Horse Shoes, in packages.
Iron, bar, pig, band and boiler.
Iron Nuts and Rivets.
Iron Bolts and Washers, in boxes or casks.
Iron Castings, heavy, 300 lbs. and upwards, each piece.
Iron Castings, in casks.
Licorice, mass, in boxes or mats.
Locomotive Tire.
Marble, in blocks, Molasses.
Millstones, in rough. Mahogany Logs.
Marble, sawed, owner's risk breakage.
Nails and Spikes, Nail Rods.
Oysters and Clams in shell, in barrels, owner's risk.
Oil in hhds. or bbls.
Plaster.
Pickles, in bbls. or cks. Putty. Pitch.
Railroad Chairs and Spikes. Rope. Rice.
Railroad Iron. Roofing Iron in boxes.
Rosin, Rigging, Rags, pressed, in bales.
Salt, Sugar, except in bags. Soda Ash.
Spirits of Turpentine.
Starch, 100 boxes and over.
Stone, unwrought. Sumac. Saltpetre.
Soda, in kegs, bbls, casks or boxes.
Saleratus, in kegs, bbls, casks or boxes.
Salt Cake. Steel, Soap, common.
Tobacco, in hhds., unmanufactured.
Tar, Tin, Tobacco, in boxes or kegs.
Tallow, Telegraph Wire. Terre Japonica.
Volute Car Springs, boxed.
Water Pipes, Whiting. Wire Rope.
Wool, foreign, pressed.
White Lead and Zinc Paints, dry and in oil.
White Lead and Zinc Paints, in cans or kegs, boxed.
Zinc, Sheets, in casks or cases.

The four great East and West lines have agreed upon similar rates between this city and the principal places at the West. These through charges differ from those on the merely local business of each road, being adopted to avoid the evils of competition. We select the rates of freight in cents per 100 lbs. from New York to the following named places by rail, classified as first, second, third and fourth:

	1st class.	2d class.	3d class.	4th class.
Buffalo	75	58	42	23
Dunkirk	80	61	45	25
Cleveland	100	78	57	33
Columbus	123	96	70	41
Cincinnati	140	110	80	46
Louisville	168	133	98	59
Indianapolis	146	114	84	48
Detroit	105	85	65	38
Chicago	149	117	85	50
Galena	187	149	112	72
St. Louis	193	153	113	68

The distances to these places are not given, because they will be found to vary according to the route selected by the forwarder. Taking that to Buffalo at 450 miles we find that the rate for first class freight is one-sixth; for the second one-eighth; for the third, about one-eleventh, and for the fourth, one-twentieth of a cent per mile.

Respecting the rates for *local* freights we take the following from the table of the Pennsylvania Railroad Company. The distances given are reckoned from Philadelphia. The sixth column shows the charge on flour per barrel, and the seventh that on salt or plaster per ton of 2,000 lbs., when taken in car loads:

	Miles.	1st class.	2d class.	3d class.	4th class.	Flour.	Salt, etc.
Lancaster	71	23	20	17	14	24	2.00
Columbia	83	25	21	18	15	28	2.10
Harrisburg	112	30	25	20	15	30	2.10
Altoona	243	71	56	46	36	72	5.35
Pittsburg	360	71	56	46	36	72	7.20

The rates are the same in both directions.

The annexed rules and regulations adopted by the same company for conducting their freight business will be valuable to many railroad men:

PENNSYLVANIA RAILROAD COMPANY'S RULES AND REGULATIONS FOR CONDUCTING THE FREIGHT TRAFFIC.

1. Agents are not allowed to deliver goods unless the freight is paid. The terms of the Company are cash in advance for prepaid freights, and other freights payable on delivery.

2. Articles at the rates mentioned in the Freight Tariff will be taken by the freight line of cars *only*.

3. All goods and merchandise will be at the risk of the owner after their delivery at the depot to which they are consigned, and must be removed within twenty-four hours of the time of the arrival.

4. The Company will not be responsible for leakage of liquids, breakage of glass or queensware, breakage of looking glasses, glass show cases, picture frames, stoves, castings, or hollow ware, or for injury to furniture, unless the same be proven to have occurred by the neglect or carelessness of the Agents of the Company; nor for injury to the hidden contents of packages; nor for the loss in weight or otherwise of grain and coffee in bags, or rice in tierces; nor for the decay or freezing of perishable articles; nor for damages arising to any article carried, from the effects of heat or cold; nor for the loss of nuts in bags; or of lemons or oranges in boxes, unless covered by canvas; or loss or damage to goods occasioned by Providential causes, or by *Fire* from *any cause whatever*, while in transit or at stations. Nor will they guarantee any special dispatch in the transportation of freight over their road or between any local stations on the road.

5. The Company will not be responsible for merchandise, unless receipted for by a duly authorized Agent.

6. All articles must be clearly marked with owner's name, and the station to which they are to be forwarded, and must be in good order when received. Agents receiving goods not in proper condition for shipment, will be responsible for losses; also, for all mistakes of delivery, shipment, or otherwise.

7. Goods in bundles will not be considered as properly packed, and this Company will not be responsible for any loss or damage of parts, or the whole of such packages.

8. Bags containing grain will be returned without charge, but at owner's risk.

9. When articles are designed, after transportation upon this Railroad, to be forwarded by some other Company, or an individual, to their final destination, the duplicate receipt furnished by the consignor must specify the same, and the articles be marked accordingly. This Company will not be responsible for such articles after they are delivered to consignee or connecting line.

10. All articles will be at the risk of the owners, at the several Way Stations and Platforms, where Depot Buildings have not been established by the Company, from the moment such articles are delivered as directed or marked, or until taken into the cars, as the case may be. A release to this effect will be required from shippers of freight to such Stations before goods are shipped.

11. All packages will be subject to charge for cooperage, when necessary.

12. No allowance will be made for deficiency of lemons or oranges, if not covered with canvas.

13. To avoid error, each box, bale, bag, package and cask of merchandise, carried by actual weight, must have the same marked thereon, and errors in overweight of any articles will not be corrected after removal from the Company's possession.

14. The conveyance of *Gunpowder* and *Friction Matches* is strictly prohibited.

15. *Specie* will be transported by the Passenger trains only, under the care of the owner, or his authorized agent, at the rate of $1 per $1,000.

16, Machinery, Furniture, Stoves, Agricultural Implements, and all similar articles, when not packed in boxes, will always be at owner's risk of breakage, from handling or any other cause, and when transported for a short distance, will be at measurement or special rates. Articles of extraordinary bulk or unusual length will be carried by special contract.

17. Grain, Feed, and similar articles, in bulk, will not be carried except at the risk of the owner, by whom it must be loaded and unloaded. *No allowance will be made on delivery for any alleged deficiency in measurement.*

18. Releases for articles carried at owner's risk will be required from the shippers.

19. When articles are sent to places where the Company has no Agent, the Freight must always be paid in advance, and the charge will be the same as to the next more distant station, at which the Company has a *Freight Agent*. Agents will manifest direct to all points named in this Tariff. Goods destined for points on the road not named in this Tariff, will be manifested to next more distant point named, and charge made as above—noting on manifest where the goods are to be left.

20. One day only will be allowed for loading and unloading cars, unless a special agreement to the contrary be made in writing; and whenever a car is suffered to remain unloaded for twenty-four hours, unless otherwise agreed, a charge will be made for the use of the car while standing loaded, at the rate of $5 per day for each eight-wheeled car.

21. The cars of individuals, if made to connect with those belonging to the Company, and constructed in a safe and substantial manner, (to be approved by the Superintendent,) will be carried at the rate of three cents per ton of 2,000 lbs. per mile for the lading, and one cent per mile for each pair of wheels. A brakesman will be required with every six cars.

22. The cars of the Company, are not used for local business on any other road, *except by special contract with the General Superintendent.*

SPECIAL RATES.

Packages.—No single lot or package will be carried for less than 25 cents any distance. First class rates at actual weight will be charged when the amount at this rate exceeds twenty-five cents.

Carriages must be securely protected from liability to injury from fire, chafing, or exposure to the weather; when so protected, they will be carried at double first class rates, actual weight, at owner's risk.

Coal Oil will be carried at special rates.

Grain, in bags or bulk, by full car loads of 18,000 lbs., will be carried at the convenience of the Company at a rate per 100 lbs. equal to one-half the charge for a barrel of flour, according to the above table. Always provided, that grain in bulk, by car loads, consigned to parties in Philadelphia, shall be taken from the Depot of the Company, or from Broad and Market Streets, by the consignee, to private siding or warehouse, and the empty cars to be returned within twenty-four hours, at their expense and risk of loss in measurement. Grain in less quantities than car loads will be charged fourth class rates.

LIVE STOCK.

Live Stock must be loaded and unloaded by the owners, at their risk and expense, and will be carried at first class rates, in car loads, at the owner's risk of all injury to their animals, from suffocation, maiming themselves or each other, and of escape; or will be carried at reduced special rates, in car loads, when shipped entirely at the owner's risk under a release to the Company; a tariff of which rates and conditions are always to be seen at the different Stations of this Company, and at Railroad Stations throughout the west. In order to obviate all grounds of complaint of the crowding of Live Stock, the owner or his agent must de-

termine how many of them to put into one car, and agree to pay for not less than *the weights specified on special tariff for transportation of Live Stock*, the Company reserving the right to charge for the actual weight of such load if it should exceed these limits. Owners or drivers will be taken on the train to attend to their stock, free of charge, but at their own risk of personal injury from whatever cause; and they must be subject to the direction of the Conductor of the train.

A single Horse, Mule, Ox or Cow, will not be rated less than 4,000 lbs., and every additional animal 2,000 lbs. until it amounts to the price per car load.

Hogs, Sheep, Lambs, and Calves, in small lots, will not be rated at less than 5,000 lbs.; when over 5,000 lbs., actual weight will be charged until it amounts to the price per car load.

Illinois Central Railroad.

The earnings of the Illinois Central Railway for the month of July were $249,929—by far the largest earnings for July in the history of the road. The July earnings for six years have been as follows:—

July, 1857....	$189,099	July, 1860....	$196,000
July, 1858....	124,299	July, 1861....	189,279
July, 1859....	139,102	July, 1862....	249,920

The road is now, almost for the first time in its history, out of debt; every dollar of floating debt has been paid off, and no more money will go to pay for renewals or commissions on loans. The funded debt is now $15,234,000 on 700 miles of railway, and 1,200,000 acres of land yet unsold. The farmers who have settled on the lands of the company are paying up, partly in money and partly in grain, with very remarkable regularity. The receipts for July were $34,182 in money and 50,000 bushels corn.

Condition and Value of Railroad Property in the United States.

The most noticeable, and perhaps most important feature in commercial and monetary affairs, is the steady appreciation in the value and price of the railway property of the country. The earnings of our roads for the present year will vastly exceed those of any former one. This is owing to the increased capacity for production of the Northern States, and to a fortunate demand abroad for their great staples. The past decade, as we have before observed, has been one of preparation; the present will be one of realization. We had first to supply the conditions by which the labor of our people, wherever they might happen to be situated, could be made uniformly productive and profitable. This has been done, and the industry of the nation, that was only a short time ago employed in the construction of our public works, is now almost solely employed in supplying traffic to them. In the mean time, the population of the country has vastly increased, while processes for the abridgment of labor have been multiplied in ten fold greater ratio. All these causes combined have added, almost beyond computation to the wealth of the country. The measure of this increase is the volume of its internal commerce, which is not only beyond all previous experience, but rests on the most solid foundations.

The traffic of the railroads of the North, for the present year, will be greatly increased by the demand abroad for breadstuffs, of which, fortunately, we have very abundant crops. Every arrival from abroad gives us higher and higher quotations for food. The dearth in other countries will be fully made good by the plenty in our own. Our railroads consequently have a clean field before them for a year at least. The demand will continue till another crop, while that now being gathered at home, will require a year for its transportation to market. During the past year, for the first time, the traffic of our railroads was very large for every month in the year. It never before presented such a degree of uniformity. This was owing to the uniformity of demand abroad for our products. The demand now existing will cause a steady flow outward, the year round, adding not only very largely to the earnings of our roads, but diminishing the expenses in ratio to receipts, by a better distribution of business. This uniformity is particularly noticeable in the earnings of the Erie and New York Central Railroads, a large portion of the increased earnings of which, during the past year, were in the Winter months.

We are accustomed to refer, but we think erroneously, a portion of the increased earnings of our railroads to the closing up of the Mississippi. We think they would have been much larger, had that river been open, from the greater activity of the internal trade of the country. The annihilation of the trade of one-third of it, has greatly diminished that of the portion in which it has been uninterrupted. The closing of this great outlet, fortunately did not seal up the interior to commerce, as artificial outlets came in good time to supply the place of the great natural one. Should this continue closed, the increased productiveness of the Northwest will so far help to make up the injury and loss sustained, as to render it hardly noticeable, although with active internal commerce in every portion of the country, the general result would, of course be vastly greater than that we now witness.

The increased value of railway property is fully reflected in the advance in the market value of their shares and bonds. In very many instances, these have, within the year past, advanced fully one hundred per cent. This appreciation in actual value has exerted a most salutary influence over the public mind of the North, depressed and disturbed as it was by the existence of a civil war of the most formidable proportions. With nearly everything to depress confidence and hope, the constant improvement in our material welfare was a most fortunate circumstance—one, the value of which cannot be overrated—as the material strength of a people is the basis of all others. As our people went along they soon saw that they had nothing to fear, either in reference to their physical condition, or in a lack of means wherewith to prosecute the war. Reverses caused only a temporary depression in the public mind, as it was felt that these only arose from a lack of appreciation of the nation's strength—an error which time would correct before this strength should be materially weakened. Every loss consequently has been instantly repaired, and every defect only served to show the, till then, latent strength and power of the loyal States.

An incidental, but at the same time powerful element in maintaining confidence at home, has been the demand that has existed abroad for food. It was a guarantee that pacific relations with other countries would be maintained. Nations, at the present time, do not rush into wars with want staring a large portion of their population in the face. The better our railroads were employed, consequently, the less likely was the traffic to be interrupted by any violent measures. The market value of their shares and securities was thus influenced by the two most powerful causes that can operate upon the public—very large earnings, and the prospect of pacific relations with those nations whose wants were a great source of the increased profits of the former.

As large as has been the advance in the market value of railway property, it has been, in most cases, by no means equal to the increase in intrinsic value. This is not strange considering the low rates to which prices had fallen, and the causes for a long time operating to depress prices. The advance in the aggregate has already equalled hundreds of millions. It takes the public a long time to investigate the vast number of securities upon the market, and to subject their value to substantial tests. These are every day demonstrating the value of some security hitherto neglected, but of real merit; so that with fluctuations somewhat violent which, considering the events of the day we must expect, prices will advance to rates that will be regulated by the prevailing prices for money, instead of depreciating, as they have done upon extraordinary circumstances that had little or nothing to do with their real value.—*Hallett's Financial Circular.*

Railroad Earnings--Monthly.

The approximate earnings of the Pittsburg, Fort Wayne and Chicago Railway during the month of July ultimo, compared with the same period last year, were as follows:

From—	1862.	1861.
Freights	$154,830 53	$104,216 85
Passengers	72,586 34	58,009 65
Express	2,700 00	2,700 00
Mails	7,825 00	7,825 00
Rent of railway	7,083 33	7,083 33
Rents	202 75	170 50
Miscellaneous	445 14	424 05
Total for July	$245,673 09	$180,429 38
Earnings, Jan'y 1, to June 30	1,684,350 68	1,376,421 48
Total earnings to July 31	$1,930,023 77	$1,556,850 86

Increase for July, $65,243 71, or 36.1 per cent.
Average increase to July 31, 1862, 24 per cent.

The earnings of the Norwich and Worcester Railroad for July were as follows:

	1861.	1862.
Passengers	$9,378 35	$12,853 77
Freight	16,287 73	19,641 77
Total	$25,666 08	$32,495 54
Increase		6,829 46

The earnings of the Erie Railway for July, 1862, were $587,009 97
Do., 1861 372,705 59
Increase $214,304 38

Tonnage of the Lake Districts.

The following statement exhibits the total tonnage of the several Lake Districts, on the 30th June, 1862:

Districts, etc.	Total Tonnage.
Burlington, Vt.	7,774.19
Champlain, N. Y.	1,791.71
Oswegatchie, "	7,332.53
Cape Vincent, "	5,228.70
Sack's Harbor, "	888.55
Oswego, "	55,552.41
Genesee, "	2,981.84
Niagara, "	774.48
Buffalo Creek, "	108,224.00
Dunkirk, "	4,274.26
Presque Isle, Erie, Pa.	7,369.09
Cuyahoga, Cleveland, O.	82,518.87
Sandusky, "	15,850.24
Toledo, "	5,468.70
Detroit, Michigan	66,887.89
Michillimackinac, "	4,747.59
Chicago, Ill.	85,748.66
Milwaukee, Wis.	28,048.19
Total Tonnage	500,456.90

The Grand Total Tonnage of the United States exceeds 5,000,000 tons.

AMERICAN RAILROAD BOND LIST.

(*) signifies that the road is in the hands of receivers. (†) that the company is in default in its interest. S. F.," Sinking Fund. "var.," that the bonds fall due at different periods

American Railroad Journal.

Saturday, August 23, 1862.

The Earnings of our Railroads.

In the general disarrangement of business consequent upon the prosecution of the war, the railroad interest in the loyal States, has suffered less, probably, than any other. As the work of restoring order progresses, it not only finds its business for the most part still left, but actually increasing at a rate that is almost unprecedented.

Below we give a comparative statement of the earnings of a number of our leading railroads for July, 1862, with those for July, 1861, as far as they have been received. A large increase is shown in almost every instance—in the aggregate nearly a million of dollars, or 35.69 per cent. The earnings of the New York Central amounted to $748,000, in round numbers, against $523,000 for the corresponding month of 1861—a gain of 43.16 per cent. Those of the Erie were $587,009, against $372,705—a gain of 57.51 per cent. In both cases, July, 1861, was an ordinarily prosperous month. The Hudson River road has also done remarkably well, showing an increase of $44,964 for July, and for the first seven months of the year, of $479,000—equal to 39 per cent. in the former and 42 per cent. in the latter case. The Harlem exhibits an increase for July of nearly 10 per cent.

The Western roads also show a satisfactory increase in earnings. Those of the Illinois Central being $249,929, against $189,279 in July, 1861—an increase of $60,650, or 32 per cent., notwithstanding the lower Mississippi has not yet been opened throughout. The earnings of the Chicago, Burlington and Quincy are 30 per cent. in excess of those of July, 1861. The Michigan Central, 39; the Michigan Southern, 43; the Galena and Chicago, 31; and the Pittsburg, Fort Wayne and Chicago, 36. The gain made in the Chicago and Northwestern, the Chicago and Rock Island, the Cleveland and Toledo, the Toledo and Wabash, the St. Louis, Alton and Chicago, the Rome and Watertown, and the Norwich and Worcester is also large.

RAILROAD EARNINGS FOR JULY.

	1862.	1861	Increase†

Total	$3,573,731 52	$2,633,688 30	$940,043 22

* Not official. † Increase 35.69 per cent.

The statement of the New Jersey Central for the first seven months showed an increase of earnings from passengers of $66,878; but this was in part off-set by a reduction in coal receipts, on account of the late freshet, reducing the aggregate increase to $22,472, or four per cent. The remainder of the year, however, will do much to restore the ratio between this year and the last as it stood two months ago. For the same period, the Cleveland, Columbus and Cincinnati showed a gain of $197,071 in the gross, and of $154,441 in the net earnings. Those (gross) of the Galena and Chicago this year foot up to $935,473, a gain of $107,393 over the same period of 1861.

It is not necessary to refer to other examples as indicative of the prosperity enjoyed by the railroads of the North. At the same time, political events and the general movement in favor of retrenchment which has gone into effect, render it certain that this increase in receipts will not be accompanied by a corresponding rise in disbursements, particularly in the items of salaries. All supernumeraries have been pretty thoroughly weeded out of the service of our railroad companies, and economy everywhere is the rule rather than the exception. This year, in fact, promises to take our public works pretty well out of the slough.

Canadian Agricultural Statistics.

From the census of 1861 we learn that the total quantity of lands held in Upper Canada is 13,354,907 acres, valued at $295,162,315, or $22.10 per acre on an average. In Lower Canada the number of acres held is 10,223,959, valued at $168,432,546, or $16.47 per acre. York in the Upper Province containing the capital city (Toronto) of course shows the greatest proportion of lands under cultivation and the highest valuation of real estate. Of its 443,577 acres held, 292,213 are

under cultivation, the average value of the whole being $52 12. In York *township* these figures are respectively 54,469, 40,081 and $79 14.

The value of farming implements, the same year, is put down at $11,280,347 for the Upper Province, York county, at the head of the list, having implements to the value of $843,288. The products of gardens and orchards for 1860, in the same Province, are returned at only $1,304,145—a sum which is doubtless exceeded by the strawberry crop of New Jersey. The value of live stock is estimated as follows. In Upper Canada, $53,227,486; in Lower Canada, $24,572,124; but it is alleged that serious errors have been committed in footing up these figures and that the value of live stock in Upper Canada is here represented as being from ten to twelve millions too high. With all this drawback, however, the difference between the two sections is vast, while it is increasing year by year.

The Eighth Census.

The following is a continuation of the preliminary chapters of the Census Report of 1860, now in course of preparation at Washington, under the direction of Jos. C. G. Kennedy, Esq.:

VALUE OF REAL AND PERSONAL ESTATE.

The marshals of the United States were directed to obtain from the records of the States and Territories respectively, an account of the value of real and personal estate as assessed for taxation. Instructions were given these officers to add the proper amount to the assessment, so that the return should represent as well the true or intrinsic value as the inadequate sum generally attached to property for taxable purposes. The result of this return by all the census takers will be found in table No. 34, whereby it will appear that the value of individual property in the States and Territories exceeds the sum of sixteen thousand millions of dollars; representing an increase of one hundred twenty-six and a half per centum in ten years in value in the aggregate, and an increase of sixty-eight per cent per capita of the free population. The rate of increaso has been immense in the Western States, while the absolute gain in the older States has been no less remarkable. For example, the rate of increase in Iowa has been more than nine hundred per cent., while the absolute increase of wealth has been two hundred and forty-seven millions of dollars; while Pennsylvania has increased at the rate of ninety-six per cent., with an absolute gain in wealth of near seven thousand millions of dollars. The wealth per capita for Iowa in 1850 was $123, while in 1860 it amounted to $366, a rate of increase of one hundred and ninety-seven and a half per cent. The wealth of Pennsylvania in 1850 per capita was $312; in 1860 per capita was $487; the rate of increase fifty-six per cent.

It must be borne in mind that the value of all taxable property was returned, including that of foreigners as well as natives, while all was omitted belonging to the States or United States. In considering the relation of population to wealth the fact must be borne in mind that a much larger proportion of the property of the Western than Eastern States is held by non-residents, and that this circumstance is not without its influence in exaggerating the wealth of individuals in States where large investments have been made by persons resident elsewhere.

The effect of internal improvements upon the prosperity and wealth of the country cannot be better illustrated than by the rapid enhancement in value of all property brought within their influence.

PRODUCTS OF INDUSTRY.

The returns of manufactures exhibit a most gratifying increase, and present at the same time an imposing view of the magnitude to which this branch of the national industry has attained within the last decennium.

The total value of domestic manufactures (including fisheries and the products of the mines), according to the census of 1850, was $1,019,106,616. The product of the same branches for the year ending June 1, 1860, as already ascertained in part and carefully estimated for the remainder, will reach an aggregate value of nineteen hundred millions of dollars. This result exhibits an increase of more than eighty six per centum in ten years. The growth of this branch of American labor appears, therefore, to have been in much greater ratio than that of the population. Its increase has been one hundred and twenty-three per cent. greater than that even of the white population by which it was principally produced. Assuming the total value of manufactures in 1860 to have been as already stated, the product *per capita* was in the proportion of sixty dollars and sixty-one cents for every man, woman and child in the Union. If to this amount were added the very large aggregate of mechanical productions below the annual value of five hundred dollars—of which no official cognizance is taken—the result would be one of startling magnitude.

The production of the immense aggregate above stated gave employment to about 1,100,000 and 285,000 women, or one million and three hundred and eighty-five thousand persons. Each of these, on an average, maintained two and a half other individuals, making the whole number of persons supported by manufactures four millions eight hundred and forty-seven thousand and five hundred, or nearly one-sixth of the whole population. This was exclusive of the number engaged in the production of many of the raw materials, and of food for the manufacturers; in the distribution of their products, such as merchants, clerks, draymen, mariners, the employees of railroads, expresses and steamboats; of capitalists, various artistic and professional classes, as well as carpenters, bricklayers, painters and the members of other mechanical trades not classed as manufacturers. It is safe to assume, then, that one-third of the whole population is supported, directly or indirectly, by manufacturing industry.

These general facts, therefore, plainly indicate that, in point of productive value, and far reaching industrial influences alone, our manufactures are entitled to a front rank among the great interests of the country. Indeed, the collection and classification of facts relating to the material progress of the people periodically intrusted to the Census office, furnish in general, valuable milestones in the pathway of the nation's greatness. But among the facts so collected, none are more instructive—none have more numerous or intimate relations to every department of the public economy; to the general welfare of the people, domestic, social, industrial, or moral—than these records of their productive capacities in the automatic and handicraft arts. However uninteresting to many, the details are full of instruction to the statist. The subject is grand in its outlines; but, contemplated in its persuasive influence upon the welfare of the whole people, the dry and repulsive skeleton of mere facts and figures presented in the official tables gradually takes on the form, substance and habiliments, and becomes animated with something of the life, activity and beauty, of a living economy. The statistics of looms, spindles and factories; of furnaces and forges; of steam engines and sewing machines, and of a thousand other instruments of creative industry, become the representatives of almost every form of national and individual happiness, exertion, aspiration and power.

THE MECHANIC ARTS,

particularly in our country, where they are most diffused, and almost universal, appear to contribute more directly than any other to the general comfort and improvement of the people. All others are dependent upon them for the general agents and instruments of their success. They are scarcely more subservient to the primary wants of mankind than to the higher ministrations of taste and refinement. The acquisition and diffusion of knowledge, the means of intercommunication and transportation, the comforts, enjoyments, and security of the fireside, and even to the honor and integrity of the nation itself, are dependent upon the skill and enterprise of the manufacturer and the mechanician; but the results of their labors are, from their nature, less obtrusive or obvious to the general apprehension than some others. The annual movements of our immense crops of grain, cotton, and other bulky staples, are easily appreciated. The pulsations of commerce may be counted by a superficial observer, in the arrival and departure of ships, and upon the records of the Custom House and the Exchange; but in the hands of the manufacturer a modicum of crude material undergoes a process of a division, transformation and elaboration, and then silently and unobtrusively disappears—diminished in bulk, but augmented, it may be, many hundred fold in value—in the ordinary channels of distribution, where it is often undistinguished from its foreign rival. It is only when the nation decennially takes its account of stock that any approximate idea is obtained of the value of this item in the general account.

And who can justly estimate the influence upon the general happiness and prosperity—upon the progress in civilization of the sum total of effective labor, capital and skill represented by such an aggregate as we have stated? What an amount of fixed capital—of labor, enterprise, ingenuity—of resources, material and immaterial—involved in the creation of nearly two thousand millions worth of manufactures in a single year. The addition of nearly one thousand millions to the annual product of domestic manufactures—an amount almost equal to the total home consumption thereof in 1850—implies also vast additions to the permanent wealth of the Union and to the elements of a progressive civilization. The increased support given to agriculture, commerce and the mining interests by the consumption of hundreds of millions of dollars worth of raw material, and to hundreds of thousands of men, women and children, who would have been otherwise unemployed, or forced into competition with the farmer or planter, instead of being consumers of their produce, forms but a part of the benefits conferred upon the community at large. The independence and security contributed by the large body of intelligent manufacturers and mechanics capable of ministering to every want, whether of supply or defence, cannot be overestimated. As might have been expected from the revelations of the census, the country has been able to lean with confidence upon this arm of its strength in the trying emergency which has put the nation in armor for the defence of its dearest interests.

PROGRESS OF THE NEW STATES AND TERRITORIES.

It is a gratifying fact, shown by the official statistics, that while our older communities have greatly extended their manufactures, the younger and more purely agricultural States, and even the newest Territories, have also made rapid progress. Nor has this department of American industry been cultivated at the expense of any other. There is much reason to believe that it affords the safest guarantee of the permanency and success of every other branch. Evidence bearing upon this point is found in the manufacture of agricultural machines and implements, which is one of the branches that shows the largest in the period under review. There is little doubt that the province of manufactures and invention in this case has been rather to create than to follow the demand. The promptness of Americans to adopt labor saving appliances, and the vast areas devoted to grain and other staples in the United States, have developed the mechanics of agriculture to an extent and perfection elsewhere unequalled. The adoption of machinery to the extent now common in farm and plantation labor furnishes the best assurance that the development of agriculture or manufactures to their utmost, can never again justify the old charge of antagonism between them in regard to labor, or injuriously affect either by materially modifying its cost or supply.

AGRICULTURAL IMPLEMENTS.

The total value of agricultural implements made in 1860 was $17,802,514, being an increase of 160.1 per cent. upon the total value of the same branch in 1850, when it amounted to the sum of $6,842,611. This manufacture amounted in New England to over two and three-quarter millions of dollars—an increase of 65.8 per cent. In the Middle States the value was nearly five and a half millions, having increased at the rate of 122.2 per centum. In the Western States, where the increase was most extraordinary, the value of implements produced was augmented from $1,923,-927 to $7,955,545. The increment alone in those States was, therefore, only a fraction less than the product of the whole Northern section of the Union in 1850, and was greater by 313 per cent. than their own manufacture in that year. In each of the States of Ohio and Illinois, which are the largest manufacturers in the West, the value of the product exceeded two and a half million dollars, being an increase in the former of 382, and in the latter of 235 per cent. in ten years. Michigan, Indiana and Wisconsin increased their production of agricultural implements 1,250,386 and 201 per cent. respectively. While in some of the Southern States there has been a decrease. In Virginia, Alabama and Louisiana the increase in this branch has been large, and in Texas, which reported none in 1850, agricultural implements of the value of $140,000 were manufactured in 1860. The whole value produced in the Southern States in the latter year (including cotton gins) was $1,-582,483, exhibitiug an increase of over 101 per cent. in the last decade.

IRON.

The quantity of pig iron returned by the census of 1860 was 884,474 tons, valued at $19,487,790, an increase of 44.4 per cent. upon the value returned in 1850. Bar and other rolled iron amounted to 406,298 tons, of the value of $22,248,796, an increase of 39.5 per cent. over the united products of the rolling mills and forges, which in 1850 were of the value of $15,938,786. This large production of over one and a quarter millions of tons of iron, equivalent to 92 pounds for each inhabitant, speaks volumes for the progress of the nation in all its industrial and material interests. The manufacture holds relations of the most beneficial character to a wide circle of important interests intimately affecting the entire population; the proprietors and miners of ore, coal and limestone lands; the owners and improvers of woodlands, of railroads, canals, steamboats, ships, and every other form of transportation; the producers of food, clothing and other supplies, in addition to thousands of workmen, merchants and capitalists and their families, who have directly participated in the benefits resulting from this great industry. It has supplied the material for an immense number of foundries, and for thousands of blacksmiths, machinists, millwrights and manufacturers of nails, hardware, cutlery, edged tools, and other workers in metals, whose products are of immense aggregate value and of the first necessity. The production of so large a quantity of iron, and particularly of bar iron, and the demand for additional quantities from abroad, tell of the progress of the country in civil and naval architecture and all the engineering arts; of the construction of railroads and telegraphs, which have spread like a net over the whole country; of steam engines and locomotives, of spinning, weaving, wood and metal working; milling mining and other machinery, and of all the multiform instruments of science, agriculture and the arts, both of peace and of war; of the manufacture of every conceivable article of convenience or luxury of the household, the field or the factory. The aggregate statistics of iron exhibit the extent to which the general condition of the people has been improved by this great agent of civilization during the ten years embraced in this retrospect.

The materials for the manufacture of iron—ore, coal and other fuel, water power, etc.—are so diffused, abundant and cheap that the entire independence of foreign supplies appears to be alike desirable and attainable at no distant period,

MACHINERY.

Probably no class of statistics possesses more general interest, as illustrating the recent progress of the country in all the operative branches, and in mechanical engineering, than those relating to machinery. Nearly every section of the country, particularly the Atlantic slope, possesses a great affluence of water power, which has been extensively appropriated for various manufacturing purposes. The construction of hydraulic machinery, of stationary and locomotive steam engines, and all the machinery used in mines, mills, furnaces, forges and factories; in the building of roads, bridges, canals, railways, etc.; and for all other purposes of the engineer and manufacturer, has become a pursuit of great magnitude. The annual product of the general machinists' and millwrights' establishments, as returned in the census of 1850, was valued at $27,998,344. The value of the same branch, exclusive of sewing machines, amounted in 1860 to $47,118,550, an increase of over eighteen millions in ten years. The Middle States were the largest producers, having made over forty-eight per cent. of the whole, but the Southern and Western States exhibit the largest relative increase. The ratio of increase in the several sections was as follows:—New England, 16.4 per cent.; Middle States, 55.2; Southern, 387; and Western, 127 per cent. The Pacific States produced machinery of the value of $1,686,510, of which California made $1,600,510. In Rhode Island the business was slightly diminished; but in Connecticut it had increased 165 per centum. The great facilities possessed by New York and Pennsylvania in iron, coal and transportation made them the largest manufacturers of machinery, which in the former was made to the value of $10,484,863, and in the latter, $7,243,453—an increase of 24.4 and 75 per cent. respectively. New Jersey raised her product to $3,215,673, an increase of 261 per cent., while Delaware and Maryland and the District of Columbia exhibited an increase of 82, 41 and 667 per cent. respectively. In all the Southern States the value of the manufacture, though small, was largely increased; the ratio in Virginia, the largest producer, being 236 per cent., while in Mississippi, Alabama and South Carolina, the next in amount of production, it was 1,626,270 and 525 per cent. respctively. This was exclusive of cotton gins, which were included with agricultural machinery. Ohio was the largest producer in the West, and the fourth in the Union, having made to the value of $4,855,-005, an increase of 125 per cent. on the product of 1850. Kentucky ranked next among the Western States, having produced over one million dollars worth, and increased her product 213 per cent. The ratio of increase in the other Western States was:—In Indiana, 98; in Illinois, 24; Wisconsin, 208; Missouri, 214, and Iowa, 2,910 per cent. respectively; but in Michigan there was a small decrease in the amount manufactured.

IRON FOUNDRIES.

Besides a large amount of machinery and other castings included in the returns of machine shops, the value of the production of iron foundries, returned by the census of 1860, reached the sum of $27,970,193; an increase of 42 per cent. on the value of that branch in 1850, which was $20,111,517. New York, whose extensive stove foundries swell the amount of production in that State, made to the value of $8,216,124, and Pennsylvania, $4,977,793, an increase of 39 and 60.9 per cent. respectively.

COAL MINES.

With the subject of iron and its various manfactares that of fossil fuel naturally associates itself. The unequalled wealth and rapid development of the coal fields of the United States as a dynamic element in our industrial progress affords one of the most striking evidences of our recent advance. The product of all the coal mines of the United States, in 1850, was valued at $7,173,750. The annual value of the anthracite and bituminous coal, according to the eighth census, was over $19,-000,000. The increase was over $12,000,000, and was at the rate of 169.9 per cent on the product of 1850. It was chiefly produced in Pennsylvania, Ohio and Virginia. The coal mines in Pennsylania, in 1850, was valued at $5,268,351. In the year ending, June 1, 1860, the State produced 9,397,332 tons of anthracite, worth $11,869,574, and of bituminous coal, 66,994,295 bushels, valued at $2,833,859, making a total value of $14,703.433, or an excess of $7,529,683 over the total product of the Union in 1850. Of bituminous coal, Ohio raised 23,339,900 bushels, the value of which was $1,539,713; and Virginia, 9,542,627 bushels, worth $690,188. The increase in Ohio was $819,587, and in Virginia, $222,780, in the value of mineral fuel, being at the rate of 113 per cent in the former, and 47.6 per cent in the latter. The increase in Pennsylvania was 179 per centum on the yield of 1850.

MINING.

The development of our several valuable mines of coal, iron, lead, copper, zinc, gold, silver, quicksilver, chrome, &c., is a subject of the highest satisfaction, constituting, as they do, the repository and fountainhead of crude materials for an immense and varied industry in the metallurgic and chemical arts. Mining in its several branches employs a very large amount of capital and great numbers of our laborious population, and shows a steady increase in the last ten years. The product of the gold mines in the Atlantic States has, however, fallen off since the discoveries of gold in California.

LUMBER.

The influence of improved machinery is also conspicuously exhibited in the manufacture of sawed and planed lumber, in which the United States stands altogether unrivalled, as well for the extent and perfection of the mechanism employed as the amount of the product. This reached, in 1850, the value of $58,521,976, and, in 1860, $95,-912,286, an increase of 64 per cent. in the last decade. The Western States alone, in the latter year, produced lumber to the value of $33,274,793, an increase of $18,697,543, or 128 per cent over their manufacture in 1850. The Pacific States and Territories produced to the value of $6,171,431, and the Southern $17,941,162, a respective increase of $3,841,826 and $9,094,686 in those sections, being a ratio of 162.7 and 102.3 per centum.

FLOUR AND GRIST MILLS.

Several branches of manufacture have an intimate relation to agriculture and the landed interests, and by their extension powerfully promote those interests as well as that of commerce. Surpassing all others of this or any other class in the value of products and of the raw material consumed, is the manufacture of flour and meal. The product of flour and grist mills in 1850 reached a value of nearly one hundred and thirty-six millions of dollars, while in 1860 the returns exhibit a value of $223,144,369—an increase of $87,246,-563, or 64.2 per cent in the last ten years. The production and increase of the several sections were as follows:—

	Value of flour and meal.	Increase.	Per cent increase
New England States.	$11,155,445	$4,834,959	76.5
Middle States.....	79,086 411	10,658,232	15.5
Western States.....	96,038,794	53,364,802	125.0
Southern States....	30,767,467	14,185,640	85.5
Pacific States	6,096,262	4,207,930	222.8

The largest mill is in Oswego, New York, which in 1860 produced 300,000 barrels of flour; the next two, in Richmond, Virginia, made 190,000 and 160,000, respectively; and the fourth, in New York city, returned 146,000 barrels. The value of annual production of each ranged from one million and a half to two million dollars.

SPIRITUOUS LIQUORS.

The manufacture of spirituous liquors in the United States employed 1,138 distilleries, independent of a large number of rectifying establishments, the product of the former being over eighty-eight millions of gallons, of the value of $24,253,-176. The middle and Western States were the largest producers, the latter yielding nearly forty-five and the former thirty-seven millions of gallons of whiskey, high wines and alcohol, the aggregate

value in each section being almost eleven millions of dollars. It is satisfactory to observe that more than ninety-five per cent of all the spirits made was from materials of domestic production, a little over four million gallons of New England rum having been the product of imported molasses.

MALT LIQUORS.

The manufacture of malt liquors, though of less magnitude, and far less pernicious in its effects, shows a still larger increase. It derives its material wholly from agriculture, and its extension promises more substantial benefits to the country than the last.

The Northern States returned 969 breweries, or more than double the number in the Union in 1850. The quantity of all kinds of malt liquors made, including 855,803 barrels of lager beer, was 3.235,-545 barrels—an increase of 175 per cent upon the total product of 1850, while its value was returned at $17,977,135, being more than three times the amount produced by breweries in that year. Nearly one half of the whole quantity was made in New York and Pennsylvania. The former had 175 establishments—45 of them in the city of New York—and the latter State 172, of which Philadelphia contained 68. The manufacture of lager beer was much increased in all the Middle and Western States, about 41 per cent of the whole being the product of the two States last named. Among the Eastern States, Massachusetts, and among the Western States, Ohio, Illinois and Missouri were the largest producers of malt liquors. There were 71 breweries in California and 8 in Oregon, producing together about 7 per cent of the total value of the manufacture.

From the Lond. Civ. Eng. and Arch. Jour., Apr., 1862.

Description of the Centre Pier of the Bridge across the River Tamar at Saltash, on the Cornwall Railway, and of the means employed for its construction.

By R. P. RRERETON, *M. Inst. C. E.*

This communication embraced, in a narrative form, a detailed account of the preliminaries connected with the Albert Bridge, which crossed the river Tamar where it was only 1100 feet wide, with precipitous banks and a depth of water to the surface of the mud of 70 feet. A dyke of greenstone trap intersected the clay slate formation at this point, and cropped out to the surface above the water on the western bank of the river. It was ascertained by borings made in the bed of the river that rock extended from the eastern side to beyond the middle of the stream, covered with mud or silt to a depth of from 3 feet to 16 feet. Subsequently, a thorough examination of the bed of the river where a centre pier would probably be built, by means of 175 borings made within a cylinder at thirty-five different places, over an area of 50 feet square, enabled an exact model of the surface of the rock to be prepared, showing the irregularities and fissures that might be expected. Eventually it was decided, from the information thus obtained, to erect one pier only in the deep water, instead of three, as would have been necessary for the spans required by the Admiralty; and when it was determined to proceed with the construction of the bridge, in 1852, it was decided that there should be two spans of 455 feet, two of 93 feet, two of 83 feet 6 inches, two of 78 feet, two of 72 feet 6 inches, and nine of 69 feet 6 inches; the total length, including the adjoining land openings, being 2200 feet.

The centre, or deep water pier, intended to carry the weight of one half of each of the two main spans, consisted of a column, or circular pillar, of solid masonry, 35 feet diameter and 96 feet high, carried up from the rock foundation to above high-water mark. Upon this were placed four octagonal columns of cast iron, 10 feet diameter, carried up to the level of the roadway, which was 100 feet above high-water mark. Upon the tops of the columns, cast iron standards were fixed to receive the ends of the tubes and chains which constituted the trusses of the bridge. The weight at the bottom of the masonry foundations was about 9½ tons per square foot, increased, when the bridge was loaded by passing trains, to about 10 tons per square foot.

In the construction of the masonry pier, a wrought iron cylinder, of boiler plates, 37 feet in diameter and 90 feet in length, and open at the top and bottom, was sunk through the mud of the bed of the river to the rock. The water was then pumped out, and the mud excavated, the masonry being built up inside, and the cylinder above the ground afterwards removed. It was expected that, by forming a bank round the cylinder after being sunk to the rock, sufficient water-tightness would be ensured for getting in the masonry. To provide, however, for the contingency of excessive leakage, the cylinder was so constructed as to admit of the application of air pressure. As the surface of the rock, although very irregular and and ragged, had a general dip to the south-west, the bottom of the cylinder was formed with a corresponding bevel, one side being 6 feet longer than the other. A dome, or lower deck, was constructed inside, at the level of the mud, and an internal cylinder, 10 feet in diameter, open at the top and the bottom, connected the lower with the upper deck of the cylinder. The 6 feet cylinder, previously used for the borings, was fixed eccentrical by inside the other, and an air-jacket or gallery, making an inner skin round the bottom edge below the dome, was formed, about 4 feet in width, divided into eleven compartments, and connected with the bottom of the 6 feet cylinder by an air passage below the dome.

Details were then given of the construction of the larger cylinder, and of the mode of launching and floating it to its position. When accurately adjusted over the intended site, water was gradually let in until the cylinder penetrated through the mud about 13 feet and rested on some irregularities upon the rock, which caused it to heel over towards the east about 7 feet 6 inches. By letting water in upon the dome or lower deck, and loading the higher side with iron ballast, the cylinder forced its way through the obstructions at the bottom edge, and took a nearly vertical position. The air and water pumps were then set to work, and the greater part of the mud and oyster shells, which filled the compartments of the air-jacket at the bottom, was cleared out, and the irregular surface of the rock excavated: the bottom of the cylinder being now 82 feet below high-water. Subsequently, a leak having broken out through a fissure in the rock on the north-east, or higher edge, considerable difficulty was experienced in maintaining sufficient pressure with the air-pumps to keep the water down and the bottom dry. The leak was at length reduced, by driving close sheet piling into the fissure. When at its full depth, the cylinder was 87 feet 6 inches below high-water at the lowest place, and then a hemp gasket was worked under the edge of the cylinder, all round the outside, to assist its water tightnese. A ring of granite ashlar, 4 feet in width and about 7 feet in height, was then built in the air-jacket; and a bank of clay and sand was deposited round the outside of the cylinder to compress the mud. When the water was pumped out of the cylinder below the dome, and the excavation of the mud was being proceeded with, a leak broke out, and the water overpowered the pumps. Additional engines and pumps were provided, and efforts were made to diminish the leakage, with varying success; but as it required four pumps to keep the water down to 54 feet, recourse to air pressure in the body of the cylinder below the dome became imminent, and preparations for its application were made. To provide against the buoyancy, or upward pressure against dome and cover, the 37 feet cylinder was loaded with 750 tons of ballast, in addition to its own weight of 290 tons. The pumps were then got in good order, and by continued pumping, succeeded in keeping the water down. The mud was excavated, the cylinder below the dome securely shored across, and the rock levelled, when the masonry in thin courses of granite ashlar in cement, in the body of the cylinder was commenced. As soon as the masonry reached the level of the air-jacket ring, it was thoroughly bonded, the plates of the air-jacket being cut out as it proceeded. Upon the top of the bonding course, two courses of hard brick work in cement were laid, making a perfectly water-tight floor over the whole diameter of the column. Meanwhile, the masonry of the air-jacket, where the leak occurred, was taken down, and the leak was diminisbed by additional sheet-piling. The leak was discovered to have broken out at the same fissure as before, and had torn away the rock underneath the masonry of the air jacket and bottom edge of the cylinder, but the masonry itself was undisturbed.

The next operation was to draw off the water above the dome and remove the ballast, to allow the masonry to be proceeded with, which it eventually did at the rate of from 5 to 7 feet in height per week. When it was 46 feet in height the influx of water was entirely stopped. After the masonry had been completed to the level of the plinth, the upper part of the cylinder was unbolted at the separate joints, and floated to the shore.—*Proceedings Insti. Civil Engineers.*

Chicago and Lake Superior Trade.—The Upper Mississippi Valley.

We know of but few cities in these times of war and bloodshed whose commercial prosperity, is equal or will even compare with that of Chicago. The building of residences throughout our city has been quite extensive the present season, and a great difficulty is still experienced in finding desirable tenements, and while we are prospering and our growth is becoming more and more substantial from year to year, it is our duty to extend our business relations, and give the country which is making us the empire city, the encouragement necessary.

The Lake Superior region and the Upper Mississippi is deserving of more than a passing notice. We have of course business relations with La Crosse, St. Paul, and the Lake region, but not until we fully compete with our rivals, can we do justice to ourselves or to the trade justly tributary to us. Chicago is not behind any city in enterprise or liberality, but it is a fact that we have not done all we should do to have the Iron and Copper trade centre at Chicago.

Our merchants are not alive to the importance of the trade of Marquette, Ontonagon, Eagle River, Houghton, Bayfield, and Superior City. The trade is quite large and is centered at Detroit and Cleveland, and until our merchants do something in the matter, the trade will be lost to our city.

The Mercantile Association should cultivate an intimate acquaintance, and it would not be unbusiness like to make the Lake Superior country a visit the present season.

The Northwestern Railway Company long since saw the advantages of communication with the Copper and Iron districts of the upper Peninsula, and as soon as their railway is completed through to the Lake, Chicago can control the entire trade of this most valuable region of country, thus ensuring a trade that has built up and sustains two cities of the lower lakes whose population is at least three times as large as Chicago.

The trade of Lake Superior is necessary to the successful growth and prosperity of a city such as Chicago. Our own people do not all wish to be on the Corn Exchange. The manufacturing interest here is on the increase, and it is only the want of the raw material to give us the advantage we now need in making us not only the commercial but also the manufacturing emporium of the great Northwest.

We need the railway direct to the Copper and Iron regions, but more frequent water communication and liberal inducements should at once be extended to the towns and dealers of Lake Superior.

La Crosse, St. Paul and the Upper Mississippi are seeking the trade of Lake Superior and the harbors of Superior City and Bayfield, and unless we are more energetic, these points may divert the trade of the Upper Mississippi Valley. Milwaukee now enjoys almost a monopoly of the trade centering at the depot of the La Crosse road on the Mississippi river, and the sooner La Crosse

can have a competing line of railway to the east, the better for her as well as this city. The trade of Minnesota is growing rapidly and La Crosse should be its near market and reshipping point, but it never can be while its dependencies are upon a single line of railway. The Upper Mississippi as well as the upper lake region, naturally seek this point as a commercial and a manufacturing centre, and it remains for our business men to facilitate direct and cheap, and frequent water communication to the upper lake region, as well as a short, competing line of railway to the Upper Mississippi.

Let us have these facilities. Let us enjoy the trade and commerce of the Northwest by way of the Mississippi on our side, and the great lakes on the other; then we may justly claim the title of the Empire City of the Northwest.—*Western Railroad Gazette, August 9.*

The Pacific Railroad.

So far as legislation can have any effect, the success of this stupendous project was insured at the last session of Congress. The Pacific Railroad bill was unquestionably the most important act relating to works of internal improvement ever passed by the National Legislature; yet in the political excitement attending the last days of the session, at which time it became a law, the subject received little more than passing notice. As a link intimately connecting the Atlantic States with those on the Pacific coast, this projected work possesses great political importance, and as affecting the interests of commerce—developing the vast agricultural and mineral resources of California and the newly organized territories—its future influence cannot be calculated. Furthermore, it is not unreasonable to anticipate that the completion of the Pacific Railroad will essentially change if not revolutionize our carrying trade with the markets of the Old World. It is almost inevitable that a large proportion of the East Indian trade, such as silk and tea, will be diverted from its accustomed channels to the most expeditious route, overland; and the same influences will tend to foster enterprises for the establishment of steam lines on the Pacific, bringing the West coast into close connection with the Orient, and speedily giving importance to the long coveted trade of Japan and the Amoor.

California papers, as might be expected, are exultant with the prospect which they conceive to be dawning on their land of gold and vegetable prodigies. The route, generally stated, is from the Missouri to Sacramento rivers—its entire length about 1,600 miles—and is divided into three sections, each to be controlled by a separate company. The main or central division of the road is to be built by a company incorporated by the bill; the Western division, from the Sacramento river to the eastern boundary of California, a distance of 112 miles, is entrusted to a company previously organized in the latter State, and the Eastern division is to be built by a company organized in Kansas. The route intersects what is no doubt the richest mineral region in the known world, at once making accessible the silver deposits of Arizona and Washoe, the salt and iron of Utah and Missouri, and opening up the whole auriferous belt of country extending from California eastward to Pike's Peak in Colorado. California editors regard the recent action of the General Government as ensuring the completion of the work. The *Atla Californian* says:

"The whole value of the bill depends upon the sufficiency of the bonus. The most important part of the bonus is the loan for thirty years of a large sum of money for every mile of road built. The road will be about 1,600 miles long. For 150 miles at the Sierra Nevada, and 150 miles at the Rocky Mountains, the loan will be $48,000 per mile. For 600 miles between those two ranges of mountains, the loan will be $32,000 per mile. For 600 miles east of the Rock Mountains, and all that may be made west of Sierra Nevada, the loan is to be $16,000 per mile. The loans are to be repaid at the end of thirty years, with 6 per cent. annual interest, provided that they are not previously paid by the transportation of mails, troops and stores. The Government would have so much use for the road, that probably the full amount of the loan would be due for freight before the end of the thirty years. The loan, therefore, may be considered as a payment of thirty years' freight money in advance."

In addition to the loan is a grant of land for five alternate sections on each side of the road, where the land is public and not mineral. Though much of this land is worthless, the grant is an important consideration. To show what reliance is placed upon the resources of the country for the maintenance of the enterprise in its early stages, the editor above quoted says:

"The land grant and the loan together appear to us a sufficient bonus to lead to the construction of the road. When the public mind is once made up that it will be built, there will be such a rush for settlement, and such a demand for travel and freight along the line, that the road would almost pay without a bonus. The laborers required in constructing the road will themselves form no small population. When 500 or 600 miles are built, people will already begin to prefer it as a mode of travel between New York and San Francisco. The time by stage is now about the same as by steamer; but when 600 miles of railroad have been substituted for the same number by stage, the time overland will be reduced to about ten or twelve days. As the overland route is made more attractive, more travelers will resort to it, and better accommodation will be demanded. Large towns will be required to supply the wants of the multitude of passengers. The freight for the central portion of the railroad will make work for those portions at the ends. So vast will be the quantities of lumber, iron, provisions, tools, and supplies of a thousand kinds, needed for the road in Utah, Colorado and Nevada, that the Kansas and Californian roads might make a fine profit over all expenses in that trade alone, if they were permitted to charge more than cost, but they are not."

Notwithstanding the California Company will derive no benefit from the grant of land, because nearly all the land West of the Sierra Nevada is private property, confidence is felt that the Western end of the road will be built without difficulty. As evidence of this, it is stated that the Folsom and the Lincoln roads in California have been built as good investments, and the San Jose, Marysville and Oroville roads are progressing on the same principle. The $48,000 per mile over the Sierra Nevada, is considered sufficient to make the road to Washoe a certainty, as the trade already on the route would yield a handsome revenue.

The events of the last few years, since Mr. Whitney first broached the project of a railroad to the Pacific, have exerted a prodigious influence for the removal of obstacles which once seemed insuperable. With a more thorough knowledge of the country obtained by elaborate surveys, and with more reason for confidence in human ability as demonstrated by past achievement, the old arguments concerning physical impracticability seem to have lost their force; and the wonderful spread of population over the Western plains, under the stimulus of the gold discoveries, presents a condition of things which none could have anticipated. The electric flash is already guided on a tiny wire through the whole distance safe from the depredations of savages or the warring elements; and postal communication is uninterrupted except by Mormon miscreants. With such progress and such achievements, the past affords encouragement for more lofty endeavors. This coming autumn we may expect the various companies will have completed their organization, and be in readiness to proceed.—*New York Journal of Commerce.*

Exhibition the Maryland Institute.

The fifteenth annual exhibition of American Manufactures and Mechanic Arts, under the direction and superintendence of the Maryland Institute, will be opeened in the Institute Building in Baltimore, on the 6th of October. The hall will be opened for the reception of machinery on the 25th of September, and on the 29th for the reception of all other goods.

Valuation of the City of New York.

The following table shows the valuation as returned by the Commissioners of Taxes and Assessments, and as corrected by the Committee on Annual Taxes:

Wards.	As returned by Commissioners of Taxes and Assessments.	As corrected by Committee on Annual Taxes.

Railroad Earnings--Weekly.

The earnings of the Milwaukee and Prairie du Chien Railroad, for the 1st week of August, 1862, were $14,577 14
Do., 1861 ..... 18,033 05

Decrease $3,595 92

The earnings of the Toledo and Wabash railroad in the 1st week of August, 1862, were. $36,055 46
Do., 1861 ..... 21,791 83

Increase $14,263 63

The Galena and Chicago Railroad earned the 2d week in August, 1862 ..... $25,230 00
Do., 1861 ..... 26,851 00

Decrease $1,621 00

The Michigan Central Railroad earned in the 2d week of August, 1862 ..... $44,878 00
Do., 1861 ..... 24,120 00

Increase $20,758 00

The Cleveland and Toledo Railroad earned the 2d week of August, 1862 ..... $17,759 00
Do., 1861 ..... 11,435 00

Increase $6,324 00

The Michigan Southern Railroad shows an increase of about $19,000 on the second week of August, and for the first half of August as follows:

1861 ..... $53,627
1862 89,954

Increase $36,327

The traffic of the Great Western Railway of Canada for the week ending August 8, 1862, was as follows:

Passengers	$22,559 69
Freight and live stock	21,242 87
Mails and sundries	1,297 17
	$45,099 74
Corresponding week of last year	34,330 91
Increase	$10,768 82

The receipts of the Grand Trunk Railway of Canada for the week ending August 9, 1862, were:

18,240 passengers	$25,623 01
Mails and sundries	2,984 08
Freight and live stock, 9,024 tons	31,423 08
Total	$60,030 17
Corresponding week of last year	58,699 45
Increase	$1,330 72

The earnings of the Chicago, Burlington and Quincy Railroad Line for 1st week in August, 1862, were | $55,436 18
Do., 1861 | 31,464 54
Increase | $23,971 64

The Toledo and Wabash Railroad earned the

2d week of August, 1862	$37,359 89
Do., 1861	27,725 67
Increase	$9,634 22

Discovery of a New Principle in Natural Law.—Steam-Power Superseded in Mining Operations.

Mr. George Rydell, of Castle street, Holborn, has invented and patented an apparatus which if successfully developed will, at least for mining purposes, entirely supersede steam engines, and all other machines hitherto used for the production of motive-power. The inventor very justly remarks that "it is no easy matter to persuade men to recoguize at the outset that which from the remote ages has been considered impracticable, if not impossible; and hence when an important discovery is made, it is desirable that it should be so explained as that no doubt can be raised against its utility in the minds of those who are competent to judge of it in a scientific manner; and having discovered a wonderful mechanical appliance, it is not his intention to enter into an elaborate description of its formation, but he will content himself by giving a faw abstract details concerning its capabilities, which he had no hesitation in affirming can be realized, and in a way never before known, although sought after centuries ago. He does not take to himself the credit of being an inventive genius, but is in a position to declare to the world that he has found out a mode of raising water from an unlimited depth to an unlimited height, without being in the least dependent upon steam-power; and he need scarcely add that to talk of performing such an act has been hitherto treated wth derision, and sconted at as a libel upon the laws of Nature; and it is, and ever has been, universally held that no pump could raise water higher than 33 feet, or thereabouts. This being regarded as the Alpha and Omega of the Natural law, engineers have always been satisfied to resort to steam agency in order to lift water below or above the ground when the height or depth has exceeded the limits of atmospheric pressure, and no work has yet appeared to upset the fallacy." Mr. Rydell considers that the time has now arrived when it must share the fate of less ancient misconceptions. Speaking of raising water from mines, however deep, he says—"The apparatus would cause the water to ascend to the surface independently of steam-power, no matter what the quantity might be; and when it is considered how vast an extent of labor, fuel machinery, &c., is annually incurred in the working of mines, the importance of my new principle will at once impress itself upon those who are interested in the mineral wealth of this country. Some of our richest mines are constantly flooded with water, and how to free them has been a knotty question for a considerable length of time, and property of the value of many millions sterling is laying dormant for want of a process by which the water in which it is submerged can be drawn away. Various methods have been adopted, but, even if successful (which they seldom are,) have involved an outlay of which the paucity of the dividends tells too plain a tale; and he can reduce the expense to a comparative trifle, and accomplish an effectual—in fact, complete—outflow of the inundating waters, and catastrophes arising from the breakages of hugh engine-beams, and other mechanical causes, will be averted, there being no attendant risks of any kind." The enormous power which Mr. Rydell proposes to secure by his marvellous system of setting natural laws at defiance may be judged of from the fact that he asserts that, although the Great Eastern has a steam-power of 3,000 horses, he can "not only propel this monster vessel over the Atlantic at the speed it now travels by steam agency, but, from cisterns of cold water, he can obtain even a greater power than it now possesses, without using any coal for navigation purposes, thereby leaving the 12,000 tons space open for additional cargo. It would be positive extravagance to consume coal for steam-engine purposes, when a still cistern of cold water would answer as well, besides enabling the vessel to leave port at a moment's notice, if necessary."—*London Mining Journal, July 26.*

RAILROAD IRON.

2,400 TONS Railroad Iron, New York and Erie pattern, "Crawshay's" make,—50, 56 and 58 pounds per lineal yard, in yard at Brooklyn, ready for immediate delivery; for sale by

August 18, 1862. FIRM **THEODORE DEHON,** 28 Beaver st.

OTTO AHLSTROM,

MANUFACTURER OF THE

LOUDON & AHLSTROM'S

PATENT EXPANSION SCREW FASTENINGS,

A QUICK and sure means of making preparatory Fastenings —The hole not requiring to be large at the bottom.

Also for ANCHORING LIGHT-HOUSES, BEACONS, BUOYS, BRIDGES, DAMS, FORTIFICATIONS, etc.

For NEWEL, GATE AND FENCE POSTS, and IRON RAILINGS in various ways.

Also, a CHEAP and ready means for fastening Iron or other ornaments (large or small) to stone or brick buildings.

For STAPLES, HINGES, AWNINGS, SIGNS, SHUTTER FASTENERS, LEADER HOOKS, etc.

For INSIDE WORK, such as for fastening articles to Hard Walls, Marble, etc., without hammering or using lead. For fastening Marble Tops to Furniture, etc. They are also so constructed as to be applied in Wood.

For LIFTING PURPOSES, such as Foundrymen's Tools for raising their patterns of wood or metal from the sand. They may be used in tapped or smooth holes.

Orders promptly executed by

OTTO AHLSTROM,
22nd St., 2nd Avenue, N. Y.

RAILS AT BOSTON.

400 TONS RAILS—50 lbs. per lineal yard—T pattern—now ready for delivery at BOSTON. For sale by

CHAS. L. PERKINS,
Or, E. LIVINGSTON,
2m30 54 Exchange Place.

CAR DUCK.

HEAVY 4-PLY FITCHBURG DUCK OF ALL WIDTHS, u to 140 inches. PLUSHES, BURLAPS, CAR HEAD LININGS, and all kinds of RAILROAD SUPPLIES.

For sale by

WILLIAMS & PAGE,
67 Water st., Boston.

QUARTZ MILLS

OF THE MOST APPROVED KIND,

MANUFACTURED BY **BURDON, HUBBARD & CO., 102** Front st., BROOKLYN, N. Y. Also Agents and manufacturers of the RUSS PATENT PREMIUM AMALGAMATORS, the best and simplest in use for saving both **fine** and **coarse** gold.

THE NEW YORK CENTRAL RAILROAD COMPANY,
TREASURER'S OFFICE, ALBANY, July 19, 1862.

EIGHTEENTH SEMI-ANNUAL DIVIDEND.—The Directors of this Company have declared a Semi-annual Dividend of Three per cent. on the Capital Stock thereof,—free of the United States Income Tax, which will also be paid by the Company—payable on the 20th day of August next, upon stock registered at New York, Boston and Albany, and on the 20th day of September next upon stock registered at London.

Stockholders whose stock is registered at New York, will receive their Dividends at the office of DUNCAN, SHERMAN & CO.; those whose stock is registered at Boston, at the office of J. E. THAYER & BROTHER; those whose stock is registered at Albany, at the ALBANY CITY BANK; those whose stock is registered at London, at the UNION BANK OF LONDON, the latter at the rate of 4s. 1d. to the dollar.

The Transfer Books will be closed at the close of business on Thursday, the 31st day of July inst., and will be re-opened at New York, Albany and Boston on the morning of Saturday, the 23d day of August next.

8t30 JOHN V. L. PRUYN, Treasurer.

CUMBERLAND COAL.

THE BORDEN MINING COMPANY

ARE now prepared to fill orders and to make contracts for the season of 1862, for **CUMBERLAND COAL,** DELIVERABLE ON BOARD VESSEL AT **Baltimore, Md., Alexandria, Va.,** or **Georgetown, D. C.** Purchasers may rely upon the Coal proving equal in quality to that heretofore furnished.

The Company also have the pleasure of announcing that they have completed, after two years' labor, their shaft and machinery upon their new property in the VALLEY OF GEORGE'S CREEK, and are lifting from the very heart of the Coal Basin a superior and perfect article of **BITUMINOUS COAL,** remarkably free from impurities of every description, and possessing qualities peculiarly adapting it to Locomotive use, and to generating steam under all circumstances. This Coal will be known in market as **"BORDEN'S PIT COAL."**

Our Railroad friends, and others requiring a superior Coal, will find it to their interest to give this a trial before contracting elsewhere.

For prices and other information apply to

WILLIAM BORDEN.
3m21 **Nos. 70 and 71 West st., New York.**

NOTICE TO HOLDERS OF Construction Bonds of Dubuque & Pacific R. R. Co.

IN accordance with the order of the District Court of Dubuque County, Iowa, you are hereby required to present your bonds, on or before the 8th day of October, 1862, at the office of the Dubuque and Sioux City R. R. Co., in Dubuque, for conversion into preferred stock of last said company; otherwise the company will be under no obligation to convert the same.

JAMES M. McKINLAY,
July 12, 1862. 4t29 Secretary, D. & S. C. R. R.

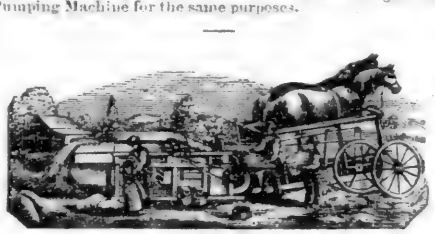
IMPORTANT
TO
RAILROAD COMPANIES.
THE ATTENTION OF
RAILROAD MANAGERS
Is called especially to the Machines manufactured especially for the use of Railroad Companies by the proprietors of the
ALBANY AGRICULTURAL WORKS,
CONSISTING OF
EMERY'S PATENT
Railway Horse Power,

Made changeable for both right and left hand work, also with changeable degrees of forces and motions of the driving Pullies without changing the Speed and Labor of the Horses, thereby adapting them to the different uses required, as Sawing Wood, Pumping Water, Driving Elevators and Machine Shops, Foundries, etc. The Power is also adjustable to any degree of wear or use, so as to always insure its working with its greatest efficiency. All the running chains in these Powers are made of the best MALLEABLE IRON which gives to them triple the strength and durability of Grey Iron which last is universally used by all other Railway Horse Power Manufacturers—thereby at the same time lessening the weight of these several hundred pounds, making them less cumbrous for handling and transportation.

WOOD SAWING MILLS.



These Sawing Mills are made upon the most approved and convenient plans in use. Having a heavy plate fly wheel fixed to the Mandrill with a Ratchet or catch pulley for the driving band on the outside of the fly-wheel—the journal bearings are fitted with Babbet Metal—the wood carriage traverses on iron ways and gibbs—a 24 or 26 inch Saw is fitted, filed and set in working order and the plates warranted. When desired, a 14 inch saw is fitted, also a table for the purpose of slitting boards, etc., for fencing and carpenter work.

The whole together forming one of the most complete and desirable sets of machines for their purposes. They are already in very general use on nearly all the principal Railroads in this country.

PRICE, ONE HORSE POWER $90.00
" TWO " " 120.00
" SAW MILL, 24 in. Saw 37.00
SETT BANDS and EXTRAS ... 5.00

PUMPING ENGINES

Of different kinds for Raising Water for Railroad tanks and other purposes, can be furnished on demand with Reciprocating or Rotary Pumps—fitted to be operated by these Horse Power and the best adapted for Railroad and Mining purposes. One of the SEVENTY-FIVE DOLLAR PUMPING ENGINES when driven by the TWO HORSE POWER has a capacity equal to any Four or Five Horse Power Steam Engine and Pumping Machine for the same purposes.

THRESHING MACHINES

Of the most approved kinds, for one and two horses and with simply Separators, or with Complete Cleaners which fit the grain for market in one and the same operations, and of the most approved construction.

They are very extensively introduced into all the grain-growing sections of this country and the world. They are especially adapted to the force of the above Horse Powers and can be driven by Steam or Water power with equal advantage. They will be furnished on the most liberal terms and warranty.

Liberal discounts made to RAILROAD COMPANIES from the above prices, and agents solicited for the sale of their manufactures.

For further particulars see the new Illustrated and Price Catalogue of the ALBANY AGRICULTURAL WORKS, furnished gratis on application to the proprietors.

HAVING erected an extensive Shop, with the most approved Machinery and Tools, are prepared to execute orders for the various classes of Freight and Passenger Locomotive Engines and Tenders, in the best manner and on the most favorable terms.

Also, Stationary Engines, and the various Tools suitable for furnishing Repair Shops.

The business of Machine making, heretofore carried on by Charles Danforth & Co., is continued by the present firm, and all orders will receive prompt attention.

THE GREAT FIRE IN TROY.

Unparalleled Triumph

OF

LILLIE'S SAFES!

The following certificates explain themselves:

TROY CITY BANK, May 21, 1862.

LEWIS LILLIE, Esq.—Dear Sir: I am sure it will give you as much pleasure to know as it does me to say, that in the recent fire of the 10th inst., which desolated our city and destroyed our Banking-house, the contents of our Bank vault, though the building itself was a heap of ruins, remained entirely unharmed. This result we attribute entirely to the fact that our old Wrought Iron Doors were, about two years since, exchanged for a set of your celebrated Chilled and Wrought Iron Doors and Frames. With the old doors, not a book or paper in the Vault could have been saved; as it is, nothing in it was even damaged, though exposed to the most intense heat.

Yours, respectfully, S. K. STOW, Cashier.

TROY, N. Y., May 14, 1862.

The undersigned, using **Lillie's Chilled and Wrought Iron Fire and Burglar Proof Safes,** at the time of the late disastrous fire in this city, would state that our safes were subjected to a severe test by fire, the heat varying in intensity, according to the locality and surroundings. The time they were exposed to the fiery ordeal, unprotected by water, varied from 24 to 72 hours. We would say that our money, papers, books, etc. were well preserved, and the Safes are suitable for further use. By comparison with Safes of other manufacture, equally exposed, we have no hesitancy in recommending Safes of Lillie's manufacture to the public on their demonstrated merit as entitled to unparalleled confidence as fire-proofs.

James Kenyon,	S. Bachelder,
S. O. Gleason,	Gates H. Barnard,
Percy & King,	W. D. Haight,
McCoy & Beadle,	Denio & Freiot,
Coon & Van Valkenburgh,	Walsh, Petit & Anthony,
S. S. McClure,	D. H. Snyder,
Ross & Smith,	Jonathan Seaman.
Robert Green,	

Not dug out—nothing in them.

TROY, May 19, 1862.

The undersigned had one of **Lillie's Wrought and Chilled Iron Safes,** which went through the fire of the 10th of May. The Safe was exposed to a severe fire for over 24 hours. In falling it turned on its face, and when turned up to open the doors was red-hot. The back of the lower part of the Safe (behind the books) was filled with pennies, which, in falling over, pressed against the books, and brought them directly in contact with the doors. The wrappers on the pennies were mostly good. The books were unfit for further use, but the writing on them was partially legible and could be copied.

DUSENBURY & ANTHONY.

TROY, May 19, 1862.

This is to certify that we had in our store, in this city, when it burned, one of **Lillie's Small Safes,** which was in the fire, without water on the building or Safe. Most of the valuables were removed before the fire, and therefore we were not in haste to get the Safe out of the burning ruins. Some of the papers left in the Safe were legible when taken out, but most of them were charred.

I. M. SINGER & CO.,
Per G. W. BABCOCK, Agent.

This is to certify that the undersigned had one of LILLIE'S Patent Chilled Iron Safes in their store, which was burned during the late severe fire in this city, and we are happy to state, the Safe preserved all its contents in first-rate condition. All the papers were legible, and the books will do for further use, without even rebinding.

GRANT, NUTTING & CO.

The foregoing comprises all the Safes of my manufacture that were in the fire, and below will be found certificates from all the owners of Safes manufactured several years since, by World's Safe Company, who used my Patent Chilled Iron Shell, but not my Fire-Proof Cement.

WORLD'S SAFE COMPANY'S SAFES.

TROY, May 19, 1862.

The undersigned, having Safes manufactured by the late World's Safe Company, and which were subjected to the great fire of the 10th inst., in this city, would state that our Safes were exposed to a severe heat, being confined in the burning ruins, unprotected by water, from one to three days. On opening the Safes the contents were mostly legible, and to a far greater extent than could be reasonably expected of any Safe. We concur in the opinion that the Safes manufactured by LEWIS LILLIE, which were subjected to the fire for a longer time and preserved their contents, are superior and powerful protectors against fire, and by this test we are prepared to recommend them as such to public patronage.

Lyman Bennett,	Silliman, Matthews & Co.,
Flood & Dunham,	E. L. Mallory,
John Hutchinson,	E. H. Virgil,

Sup't National Express Co.

The undersigned, having Safes manufactured by the late World's Safe Company, and which were subjected to the great fire in this city, would state, that on opening our Safes the contents were mostly legible. We concur in the opinion that the Safes manufactured by LEWIS LILLIE, which were subjected to the fire for a longer time and preserved their contents, are superior and powerful protectives against fire, and we are happy to recommend them to public patronage.

W. & L. E. GURLEY,
R. L. & G. DRAKE,
LEONARD SMITH,
H. E. & W. ALENDORPH, Absent.

TROY, May 19, 1862.

To whom it may concern: We would certify that when the recent fire broke out in this city, we took out from our Safe (which was made by World's Safe Company) all our books, papers, etc., and then left it to the flames without shutting the door, and the Safe will do for further use by being repaired, although the book case was destroyed by the door being left open through the fire.

ACKLEY & CO.

TROY, May 19, 1862.

The undersigned, using Safes manufactured by the World's Safe Company, at the time of the late disastrous fire on the 10th instant, in this city, would state that our Safes were filled with fire-brick for the fire-proof, and while several of this class preserved their contents, ours were considerably charred, and only , part legible. In justice to Mr. LEWIS LILLIE, we are pleased to state that Safes of his manufacture proved to be powerful protectors against fire, and have preserved their contents, after having been exposed to the fiery ordeal, unprotected by water, from one to three days.

Stephen Holton,	Luther Greenman,
Bennett, Strickland & Fellows,	E. W. Johnson,
Corloss & House,	J. H. Goodsell.

TROY, N. Y., May 17, 1862.

LEWIS LILLIE—Dear Sir: We were using at the time of the late severe fire of 10th inst., a Safe purchased in 1852 of the late World's Safe Company. The contents were considerably charred, but our Ledger is mostly legible, and we are able to copy it.

The Safe was subjected to a severe heat for over eighteen hours, and we are satisfied that if water had been thrown on the ruins, as is ordinarily the case, the contents would have come out uninjured. You will please repair our Safe, placing in it the improvements embraced in Safes of your manufacture, and oblige

SHELDON & GREENE.

N.B.—The above Safe is believed to have damaged the contents more than any of those named in this circular.

There were only seven Sheet Iron Safes, made by Herring and others, outside of the railroad depot, that were exposed to the fire, four of which were entirely burnt out; the fifth was saved by being early cooled off by water; the remaining two were not severely tested.

LEWIS LILLIE.

New York, Saturday, August 30, 1862.

Rome, Watertown and Ogdensburg R. R.

As announced in a previous number, the formal opening of the Rome, Watertown and Ogdensburg Railroad took place on the 20th instant, a large and respectable company from this city being present on the occasion. The extension line is 19 miles in length, connecting Ogdensburg with the Potsdam and Watertown division at a point about eighteen miles south-west of Potsdam. The first named place is therefore brought within 400 miles of this city, the distance being traveled by rail in sixteen hours, and at a cost of about ten dollars. Compared with any other route in operation from New York to Ogdensburg, there is a saving of fully seventy miles in length, and a more than corresponding advantage in time. At Ogdensburg the road taps the St. Lawrence, the Grand Trunk Railway of Canada, and the Prescott and Ottawa City Railway, the river being nearly always passable either by ferry-boats or on the ice. On the Erie Canal and the Hudson River the company own a line of propellers for heavy freight, enabling them to transport merchandise between New York and Rome in three days.

The entire line is now 192 miles along, consisting of the main stem from Rome to Watertown and thence to Ogdensburg, about 143 miles; next, the Cape St. Vincent branch, 25 miles, and lastly the branch to Potsdam and the Northern Railroad, 24 miles. It will thus be seen to be next in length to the Erie and the Central. This arrangement of the principal line and branches is different from what was originally intended, but is the necessary result of circumstances over which the companies had at first no control.

The cost of the new line, 19 miles, has been only $300,000; but depot buildings and some additional rolling stock are required which may call for possibly $100,000 more. It is in contemplation to run a wharf into the St. Lawrence for a few hundred yards, so as to reach deep water and secure freedom from the current. The company own a narrow headland which is well adapted to the purpose, enabling the work to be constructed at little cost.

The present road was built as two separate interests, the line from Rome to Watertown and St. Vincent having been completed in June, 1852. Its length was 97 miles and its cost $2,159,500, represented by $1,498,500 of stock, $375,000 first mortgage and $310,000 second mortgage bonds. At the present time the capital is put at $1,500,000 and the mortgage debt at $700,000 in round numbers, the latter being in process of liquidation by a sinking fund. The track is in good condition, the rail used weighing 56 lbs. per yard.

The Potsdam and Watertown road is 75½ miles long and cost $1,594,956, of which $665,419 was paid in as capital, the residue consisting of first and second mortgage bonds and floating debt. The first mortgage ($800,000) was guaranteed by the Rome and Watertown; but on the failure of the borrowers to pay the interest the mortgage was foreclosed and the road sold to the Watertown and Rome Company at a small figure beyond the bonded debt. At the present moment, as we learn from a statement by one of the Directors, the company's obligations consist of $1,500,000 of capital stock, $700,000 in bonds on the W. & R. division, $800,000 on the Potsdam end, and $300,000 on this and the newly opened extension. There is no floating debt. It will be seen that while about four millions and a quarter have been expended in building the whole work, its cost to the present company was only $3,300,000, or $17,200 per mile.

It is proposed to consolidate the $800,000 and $300,000 issues, making a new one for $1,200,000, the balance being used to complete the improvements. A sinking fund sufficient to liquidate the entire principal at maturity will be provided and the new description be issued only in exchange for the existing ones.

We may add that the business enjoyed by the company is increasing, while their policy is invariable to reject all that cannot be conducted at a profit. During ten years the Watertown and Rome Company have paid 76 per cent. as dividends.

The country traversed by the road is for the most part excellent, being underlaid with extensive deposits of limestone, sandstone and iron. Its dairy products are among the best in the country, large quantities being annually sent *Westward* as well as to this city. Watertown is a flourishing place having a large manufacturing industry.

Mr. W. C. Pierrepoint, of Pierrepoint Manor, is President, and Mr. J. Addison Day, of Watertown, Superintendent. Mr. R. E. Hungerford, of Watertown, is Secretary and Treasurer.

Northern Illinois Railroad.

The completion of the Northern Illinois Railroad was celebrated by an excursion on the road from Chicago on the 14th inst. *The Chicago Tribune* says:

The completion of the Northern Illinois Railroad a continuation of the Racine and Mississippi, opens another avenue of trade and commerce for Chicago. The distance from this city to Savannah, on the Mississippi River (via the N. W. R. R. to Clinton Junction), is 181 miles, through a fertile, beautiful, thickly settled, grain-growing region, which our merchants and produce dealers will visit with profit.

The completion of this road is another milestone in the progress of the great North-West. In June, 1852, the completion of the first railroad to the Mississippi was celebrated at Rock Island. The Northern Illinois is the tenth railroad that now connects the Mississippi with the East, north of the Ohio River. Here is another instance of the triumph of Northern mind and muscle—when an entire railroad is built and equipped in times like these; and when a town of hotels and warehouses, stores, &c., as Lanark has, springs into existence, as if by magic, from what was only nine months ago a broad corn-field, and now a town of several hundred inhabitants, who last week raised a company for the war from their numbers.

Chili--Its Financial Resources.

The domestic debt of Chili, bearing three per cent. interest, amounted on the 21st of July, to $2,342,225. The foreign debt consists of the English loan of 1822, which has now been reduced to $4,911,500; and the English loan of 1858, the principal and interest of which now amounts to $7,620,044 74—making the total debt of the republic $14,873,769 74. The loan of 1858 which was obtained for railroad purposes is accounted for as follows:

Southern Railway	$2,000,000 00
Santiago and Quillota Railway	1,436,456 11
Treasury office	1,487,531 07
Paid in advance to contractor, Mr. H. Meiggs	191,784 26
Do. do. for materials	186,688 86
Railway of the Meiggs contract	548,656 85½
Money loaned	1,429,958 41
Expenses	81 37½
Cash at the Collectorship at Valparaiso	143,497 04
Cash	195,410 76½
Total	$7,620,044 74½

The revenue of the Republic from all sources for the year 1861, were as follows:

From custom houses	$3,538,804 99
" monopolized goods	953,787 24
" tax on plantations	666,789 64
" tax on sales (alcabalas)	221,434 03
" licenses	74,639 00
" stamp paper	106,089 00
" post office	116,307 17
" tax on capital	3,342 42
" mint	27,572 25
" toll duties	45,729 03
" transitory sources	96,325 39
Total receipts in 1861	$5,850,821 19
Total expenditures	7,362,155 61
Deficit	$1,511,334 42

The Secretary of the Treasury proposed to contract another domestic loan to supply the deficiency; and meet the balance of the public expenditure of the current year by issuing Treasury notes payable at from one to eighteen months, bearing 5 per cent. interest. The money loaned by the government, which is to be gradually collected, will, it is supposed, be sufficient to meet the payments of these notes as they mature. The railroads, being nearly exclusively the property of the government, will soon become a source of great revenue, as they are far advanced toward completion. The new tariff, to go into operation on the 1st of January next, is also expected to increase the revenue. The business of the custom houses of the Republic in 1860 and 1861, have been as follows:

	1860.	1861.
Foreign goods	$26,764,149	$23,148,955
Foreign goods entered for home consumption,	22,171,506	16,676,424
Foreign goods re-exported	3,784,319	4,953,037
Foreign goods withdrawn for the Argentine provinces	1,484,176	585,489
Export of home produce	24,813,448	20,349,634
	$79,017,598	$65,713,539

The imports in 1861 were as follows:

Provisions	$3,690,356
Machinery and implements	1,131,749
Raw materials	1,937,629
Articles of luxury	1,728,374
Articles manufactured	8,188,314
Total imports	$16,676,422

And the exports were:

Agricultural products	$4,977,891
Mineral products	14,426,278
Sundries	925,465
Total exports	$20,329,629

The following is a comparative statement of the exports of Chili during the years 1860 and 1861:

	1860.	1861.
Coal	$274,011	$336,099
Barley	443,525	446,728
Jerked beef	120,806	75,321
Copper bars	5,828,363	5,594,610
Regulus	3,323,476	3,534,168
Cow hides	983,955	528,009
Vermicelli	42,523	31,051
Beans	42,617	31,833
Navy bread	168,251	101,105
Flour	1,170,351	1,326,913
Wool, assorted	464,568	207,648
Timber, assorted	167,582	152,071
Silver ore	906,201	821,568
Copper and silver regulus	573,230	221,223
Copper ore	4,386,907	1,923,116
Nuts	68,077	45,604
Silver bars	1,534,066	1,308,680
Silver, refuse (chatalonia)	4,746	11,018
Copper, refuse (retalla)	876	209
Wheat	1,054,501	1,639,497
Total	$21,559,655	$18,476,976

Railroad Earnings--Monthly.

The earnings of the Cleveland, Columbus and Cincinnati R. R., for July, 1862, were $131,686 88
Do., 1861 82,689 86
Increase $43,997 02

Boston and Maine Railroad.

The gross earnings of this road for the fiscal year ending May 31, 1862, have been as follows:

From passengers	$457,483 16
" freight	249,033 79
" rents	12,331 77
" mails	10,623 06
" interest	2,955 86
	$732,427 64

And the expenses were:

Repairs of road	$69,607 28	
" bridges	9,565 39	
" stations, etc.	20,550 23	
" locomotives	30,254 32	
" cars	20,525 17	
Coal	16,605 88	
Wood	37,949 89	
Oil and waste	7,866 80	
Switchmen, gatemen, etc.	22,084 32	
Passenger expenses	62,699 53	
Freight "	49,191 23	
Taxes	13,878 51	
Danvers Railroad rent	7,500 00	
All other expenses	41,418 29	
		409,696 84
Net earnings		$322,730 80
Depreciation of locomotives and cars	$14,006 00	
Renewals of rails	18,318 30	
		32,324 30
Balance of net earnings		$290,406 50
Deduct two dividends of 3 per cent. each		249,342 00
Leaves a balance undivided of		$41,064 50
Add balance from previous year		587,862 50
Making the sum of undivided earnings		$628,927 00

Compared with the previous year, the earnings and expenses are as follows:

	1860-'61.	1861-'62.
Gross earnings	$930,151 31	$732,427 64
Expenses, renewals, etc.	529,728 45	442,021 14
Net earnings	$400,422 86	$290,406 50
Mileage of passenger trains	449,152	409,437
" freight "	181,019	168,373
" wood "	4,755	1,349
" gravel "	8,395	960
" extra "	17,400	19,029
	663,721	599,048
Passengers carried	1,868,797	1,620,855
Do., carried one mile	28,308,103	24,642,836
Tons of freight	273,440	193,368
Do., carried one mile	7,551,842	5,552,110

The total length of the main line, from Boston to South Berwick Junction is 74.26 miles.

Medford Branch	2.23 "
Methuen "	3.61 "
Great Falls "	2.95 "
Newburyport Railroad	26.97 "
Danvers "	9.20 "
Total length of road operated	$119.22 miles.

The capital stock authorized by charter is $4,550,000, of which $4,155,700 has been subscribed; of this $4,076,974 52 has been paid.

The company has no funded debt.

The cost of road and equipment May 31, 1862, was as follows:

Graduation and masonry		$884,067 40
Wooden bridges		371,468 55
Superstructure, including iron		984,523 89
Stations, buildings, fixtures, etc.		520,722 78
Land, land damages and fences		847,198 08
Engineering, and other expenses		272,388 94
		$3,880,369 64
Locomotives	$195,300	
Passenger and baggage cars	73,990	
Merchandise cars	143,279	
		412,569 00
Total cost of road and equipment		$4,292,938 64

The equipment consists of 36 locomotives; 53 passenger, 19 baggage and 585 freight cars.

The gross receipts for the past year are less than those of the previous year by $197,723 67. The expenses, however, show a reduction of $87,707 31, making the decrease in net earnings only $110,016 36. The directors say:

It is a matter of regret that we are unable to present a more favorable exhibit of the past year. The cause of this unfavorable condition of things is national, and beyond our control. But it is none the less real—none the less disastrous—because without remedy.

The same cause, which has operated unfavorably on our road, has had a contrary effect on those roads which are made channels of communication between the large cities and Washington.

Ours is a road dependent more upon its local than foreign business. Of the staple products of the country, very little, comparatively, passes over it, except what is consumed in the manufacturing, mechanical, and other industrial pursuits along its line.

In consequence of the great scarcity of cotton, that branch of manufacture has furnished much less transportation than usual. Whenever the business of the country shall have resumed its former condition of growth and prosperity, a more favorable statement may be expected.

We would remark here, that from the operation of causes, which may prove temporary, the business of the current year, since May 31, has proved much more satisfactory than during the corresponding period of the last year.

In former years, we have received considerable sums of money from the surplus earnings of the Portland, Saco, and Portsmouth Railroad. The same causes, which have unfavorably affected our

road, have had a similar effect upon that road. We have had no call upon us to supply funds for the guarantied dividends, and probably shall not be called upon for that purpose. But, until more prosperous times, we cannot reasonably expect any considerable revenue from that source.

By examining the statement of undivided earnings for several years, it will appear that the amount has steadily increased. That amount, however, is not invested in cash or cash assets. This will appear from the following statement:—

The amount actually received from the sale of 41,557 shares of capital stock, is $4,076,974 52. Upon that number of shares dividends were declared in 1850, and there has been no change since.

The construction accounts, showing the cost of the road and equipment, amount to $4,292,938 64; consequently the sum of $215,964 12 more than was received from the sale of shares has been expended in constructing and equipping the road.

The available assets of the Corporation, of all kinds amount	$612,781 20
Deduct from this sum the ascertained liabilities	199,821 32
This balance being	$412,962 88
Together with the above sum of	215,964 12
Makes the sum of	$628,927 00

Which is the amount of undivided earnings.

In other words, of the sum of $628,927, which is the amount of the undivided earnings, as before stated, $215,964 12 is invested in the construction and equipment of the road; and the balance, being $412,962 88, is invested in other items of property, after deducting from their sum total the ascertained liabilities.

It also appears that the corporation owes only one note of $22,000, balance due for land purchased in Boston. This note will become payable Oct. 1 next, and can then be paid, without any inconvenience, from the money in the Treasury.

Our liability on account of the Newburyport Railroad, last year, was $72,239 20. It is now only $4,140, and that is not on interest.

Notwithstanding we have so largely reduced our indebtedness during the past year, we have, at all times, been able to meet the legitimate demands upon the treasury, without hiring money. Thus it appears that, while our financial condition has been easy, there has been but little surplus of money idle in the treasury.

The freight building destroyed by fire in July, 1861, has been replaced. A brick engine house is also in process of erection at South Berwick Junction—the cost of which, exclusive of the foundation will not much exceed $4,000. The northerly abutment of the bridge over the Cochecho river has been rebuilt. The tracks over the Mystic river are now being relaid with new timber above the action of the tide. Extensive repairs upon Miller's river and Charles river bridges have also been made. About 40,000 cedar ties have been used in repairs of track during the past year. The average number used for the past seven years has been about 35,000, at an annual expense of $11,000. In addition to which there has been an annual expenditure for chesnut switch ties of something less than $1,000. The amount required to be expended annually in renewal of ties is estimated at $12,800. For the last five years the expenditure for iron rails has been on an average $20,332. In the past, as in previous years, it has been the purpose of the directors to keep the bridges, track, rolling stock, &c., in thorough repair. No expense has been spared to accomplish this object. Whatever would conduce to the safety or comfort of the traveling public has been cheerfully granted. The directors close their report by expressing their undiminished confidence in the value of this property; and the assurance that whenever the great industrial pursuits of the country are prosperous, the stockholders may rely upon generous returns from their investment.

Manufactures of New York.

We have before us a table from the Census Returns of 1860, giving the number of industrial establishments in the city of New York; the amount of capital invested, cost of raw material, number of hands employed, and the value of the annual product. From this we learn that the number of manufacturing establishments in this city in 1860, was 4,259; capital invested, over $60,000,000; cost of raw material, $88,500,000; number of men and boys employed, 64,000; number of women and girls, 24,500; the annual value of production was $158,000,000. As compared with the census of 1855, these figures show an increase of 1,860 establishments, $28,000,000 of capital invested, $32,000,000 in cost of raw material, nearly 20,000 in the number of persons employed, and over $52,000,000 in annual product. The more prominent branches as to number are bakers, boot and shoemakers, carpenters, cigar makers, printing, clothing, furniture makers, millinery, saddles and harness and blacksmithing; the largest sums of capital invested are in printing, clothing, gas, sugar refining, iron machinery and steam engines, piano fortes, malt liquors, iron founding, gold and jewelry, and boots and shoes—all these over a million each. The largest amount of capital invested in one branch is printing, viz.: book printing, $3,121,000; newspapers, $2,941,200; job printing, $645,800; printing presses, etc., with binding, type, and stereotype work, engraving, ink, and lithography, $1,942,650—in all $8,650,650. In the cost of raw material, sugar refiners stand first—over sixteen millions; then clothing, nearly ten millions; printing (newspaper) over three millions; flour, and meal, and iron machinery about two and a quarter millions each; cured meats, two and three quarter millions, bakers, over two millions; of those using up from one to two millions are boot-makers, carpenters, cabinet makers, furriers, gas factories, gold and jewelry makers, hatters, iron founders, lead pipe and shot makers, brewers, lard and sperm oil refiners, job printers, shirt makers, chandlers, and umbrella makers. The greatest number of male workers is in clothing, 10,954; next, boots and shoes, 3,643; then come, of trades employing over 1,000, carpenters, cabinet makers, gas factories, iron foundries and iron machinery, piano fortes, book printing, newspaper printing, and sugar refining. Women and girls are of course most in number in clothing business, there being 10,624—about as many as of males; shirt making employs 2,794, and hoop skirts 1,474; no other trades employ a thousand; there are 350 at artificial flowers, 811 in book folding and binding, 359 at paper boxes, 575 at carpets; cloaks, 379; furs, 500; millinery, 778; printing nearly 1,000; fringes and trimmings, 476; in tobacco, 318; umbrellas and parasols, 706. Of the value of manufactured articles, refined sugar is the greatest—more than nineteen millions of dollars worth. Next comes clothing, $17,000,000; printing more than $10,000,000; bakers, $4,367,000; iron machines and steam engines, about $4,500,000; boots and shoes, nearly $4,000,000; cured meats, $3,211,730; furniture, $3,790,000; gas, $3,284,000; carpentery, $2,843,000; flour and meal, $2,612,500; gold and jewelry, $2,161,091; hats, $2,125,783; hoop skirts, $2,064,667; iron founderies, about $2,500,000; malt liquors, $2,150,000; pianos, $2,430,000, and about fifteen others running from one to nearly two millions. The per centage of increase for five years—1855 to 1860—has been, on the number of establishments, 77½; capital employed, 86½; cost of material, 57; hand employed, 28; value of annual product, 49¼.

The New Narrow-Gauge Rail Route Across New Jersey via Camden, and Raritan Bay.

In the matter of the application of the Camden and Amboy Railroad Company for an injunction to restrain the Raritan and Delaware Bay and Camden and Atlantic Railroad Companies from such a connection of their respective roads as would open a continuous rail line from the Delaware river at Camden to Port Monmouth on Raritan Bay, Chancellor Green, on Monday, August 18, delivered an opinion, refusing the injunction asked for. Subjoined is the opinion of Chancellor Green:

"The Delaware and Raritan Canal and the Camden and Amboy Railroad and Transportation Companies, complainants, *vs.* the Raritan and Delaware Bay Railroad Company, the Camden and Atlantic Railroad Company and others, defendants.

The necessity for an immediate decision of this cause has allowed no opportunity for the preparation of an extended opinion; but the thorough research and elaborate arguments of counsel (for which I acknowledge my indebtedness) have satisfied me as to the principles which must be recognized and the conclusions which must be adopted in the disposition of the motion now before the Court. Those principles and conclusions I shall, therefore, now state without any attempt to present in detail the reasons upon which they are founded.

1. The complainants have, by virtue of their contract with the State of New Jersey, the exclusive franchise of transporting passengers and freight by railways across the State between the cities of New York and Philadelphia, and are entitled to the protection of a Court of Equity in the enjoyment of that franchise.

2. There is no sufficient evidence in the cause that the rights which the complainants by their bill seek to maintain have been impaired or relinquished by consent, or the complainants' right to protection forfeited by acquiescence in the acts of the defendants.

3. The incorporation of the Camden and Atlantic Railroad Company to construct a railroad across the State from Camden to the sea, at or near Absecom Inlet, and the incorporation of the Raritan and Delaware Bay Railroad Company to construct a railroad from Raritan Bay to Cape Island were no violation on the part of the State of their contract with the complainants.

4. The junction of the Camden and Atlantic Railroad with the Raritan and Delaware Bay Railroad at their (necessary and legitimate) point of intersection, so as to form a continuous though circuitous line of railway from Camden to the Raritan Bay, and which, with the aid of steamboats upon the Delaware River and Raritan Bay, will form a continuous line, and which, by possibility, may be used for the transportation of passengers and merchandise across the State between the cities of New York and Philadelphia, constitutes no violation of the complainants' right.

5. There is a legitimate purpose for which these roads thus united may be used, viz: The transportation of freight and passengers from points and places within the State of New Jersey along the line of the respective roads and between those points and the cities of New York and Philadelphia, respectively.

6. There being a legitimate purpose for which these roads may be constructed and used, and for which a junction between them may be formed, the defendants cannot be restrained from effecting such junction merely because it may be perverted to an unlawful purpose.

7. The fact that either of the said roads, or the connecting link between them, is being constructed without lawful authority, either because no survey of the route has been filed in the office of the Secretary of State, or because it is not constructed in conformity to the route prescribed by its charter, constitutes no ground for equitable relief against such construction, at the instance of the complainants, unless their rights will be thereby violated.

8. Such unauthorized construction and connection of the roads may afford evidence tending to show a fraudulent design, on the part of the Directors, to violate the rights of the complainants, but it is not sufficient, upon a motion for a preliminary injunction, to overcome the answers of the defendants under their corporate seals, and under the oaths of their officers, who are made defendants for the purpose of discovery.

9. Under the views taken by the Court of the true construction to be given to the contract between the State and the complainants, the answer of the defendants is a full denial of the equity of the complainants' bill, and renders the allowance of an injunction before the final hearing improper.

10. If the roads of the defendants, by means of the contemplated connection, should be used for the purpose of transporting passengers or merchandise between the cities of New York and Philadelphia, or to compete the business with the railroads of the complainants between the said cities in violation of the contract between the State and the complainants, full and adequate protection to the complainants' rights can be given by injunction, restraining such use of the road.

11. No duties imposed upon the defendants in the prosecution of their legitimate business by acts of incorporation, and no contract into which they may have entered or may enter with third persons or with each other, can justify any violation of the rights of the complainants, or afford protection against the consequences of such violation.

12. The State is no party to this suit. Her sovereignty cannot be entrenched upon, nor her right of eminent domain impaired, by any decision in this cause, nor by any unauthorized or illegal acts which may be done or permitted by the defendants under color of her authority.

13. If the roads of the defendants, by means of the connection that may be made between them, either lawfully or unlawfully, shall be fraudulently used in violation or evasion of the sovereign rights of the State, she has the power and is fully competent to guard those rights.

The application for an injunction must be denied, and the rule to show cause discharged, with costs."

Construction of the Statutes as to the Ringing of Engine Bells at Railroad Crossings.

SUCH STATUTES ARE FOR THE BENEFIT OF PEOPLE TRAVELING ON THE HIGHWAY. A PERSON INJURED WHILE WALKING ALONG THE TRACK, CANNOT MAINTAIN AN ACTION AGAINST THE COMPANY, BY REASON OF THE NON-RINGING OF THE ENGINE BELL.

The Supreme Court of Rhode Island, in the case of O'Donnell *vs.* the Providence and Worcester Railroad Company have decided that the fourth section of the "act in relation to railroads" in that State, giving an action to any one injured by the neglect of a railroad company to ring the bel upon their locomotive engine for the distance, at least, of eighty rods from the place where the railroad crosses any turnpike, highway or public way, upon the same level with the railroad, and keep the same ringing until the engine shall have crossed such turnpike or road, was exclusively designed for the benefit of persons crossing the turnpike; and hence a person who is injured by the engine, whilst he is walking along the track of the railroad and not at any crossing, cannot recover damages against the railroad company for such injury upon the ground that the injury was caused by their neglect to ring the bell upon their locomotive, as required by the statute.

The plaintiff's declaration alleged that on the 25th day of April, 1857, the defendants unreasonably neglected and refused to ring any bell upon their locomotive engine, whilst the same was passing upon their railroad, within the distance of eighty rods from the place where said railroad crosses a certain public way, to wit: Webster street in the city of Providence, at the same level with said road, and unreasonably neglected and refused to keep said bell ringing until said engine had crossed said public way: by reason of said neglect the plaintiff was thrown down by said engine and run over and greatly injured, so that he was compelled to have his leg amputated, etc., etc.

The act under which the action was brought so far as applicable to it, is as follows:

Sec. 1. Every railroad company incorporated under the authority of this State shall cause a bell of at least thirty-two pounds in weight to be placed upon each locomotive engine passing upon their road; and the said bell shall be rung at the distance of at least eighty rods from the place where said railroad crosses any turnpike, highway, or public way upon the same level with the railroad, and shall be kept ringing until the engine has crossed such turnpike or road.

Sec. 2 prescribes the duty of placing a board at the crossing with the following inscription in capital letters "Railroad Crossing—Look out for the Engine while the Bell rings." Section third is as follows:

If any railroad company shall unreasonably neglect or refuse to comply with the requisitions contained in this act they shall forfeit for every such neglect or refusal a sum not exceeding one thousand dollars, to be recovered in an action of debt before any court proper to try the same; one half thereof to and for the use of the State, and the other half to and for the use of the person who shall sue for the same. And the said railroad company shall also be liable for all damages sustained by any person by reason of such neglect or refusal on the part of the company.

At the trial the judge instructed the jury, *pro forma*, that if they were satisfied as to the fair result of the whole testimony, that the defendants neglected to ring their bell as alleged in the declaration and that in consequence of such neglect the plaintiff was injured, they should find a verdict in his favor, without reference to the place where he was, or whether he was or was not lawfully there. Under these instructions, the jury having returned a verdict for the plaintiff for $1,500 damages, the defendants moved for a new trial, upon the ground of error in law in said instructions. The following is the opinion rendered at the decision of the case, after argument at a General Term of the court.

BRAYTON, J.—The plaintiff does not allege that the defendants conducted the engine carelessly and negligently, and that by reason of such carelessness and negligence the plaintiff was knocked down and injured, but in the language of the statute, that the defendants unreasonably neglected and refused to ring any bell upon a locomotive engine of theirs passing upon their railroad at the distance of eighty rods from the place where said railroad crossed a certain public highway upon the same level with the railroad, etc., by reason whereof the plaintiff was thrown down and injured.

If the defendants have violated any duty owing from them to the plaintiff, and by any means or in consequence of that violation the plaintiff has suffered injury, he has a right to compensation and damages at the hands of the defendants for for such injury. In the language of the books, an action lies against him who neglects to do that which by law he ought to do; and that whether the duty be one existing at common law or be one imposed by statute. In order, however, to a recovery, it is not sufficient that some duty or obligation should have been neglected by the defendants, but it must have been a neglect of some duty or obligation to him who claims damages for the neglect. In 1 Comyn's Digest, Action upon Statute F, it is said: "In every case where a statute enacts or prohibits a thing for the benefit of a person, he shall have a remedy upon the same statute for the thing enacted for his advantage, or for the recompense of the wrong done to him contrary to said law;" confirming the remedy to such things as are enacted for the benefit of the person suing. * * * * * *

The proof in this cause as given by the plaintiff, was that he the plaintiff, was not, at the time the injury happened, either at the place where the railroad crossed the public highway on the same level, nor upon the highway which was so crossed by the railroad, but at a very considerable distance from any such highway, and upon the track of the railroad. * * * * *

Whether the instruction was or was not erroneous depends upon the construction to be given to the statute. If the thing enacted here, viz., the ringing of the bell, was enacted for the benefit of persons in the position of the plaintiff, then the instructions were correct. If, on the other hand, it was enacted for the benefit of those only who were

travelers, and had occasion to pass upon the high-, and crossed it at grade, then was the instruction erroneous?

Now in looking at the provisions of this statute, e think the purpose and object of them are reasonably clear. The act does not require the bell to be rung at or near the approach to any place where any private passway crosses the railroad, nor near any place where the railroad crosses even a public highway, but only near highways or turnpikes which the railroad crosses on the same level and where only there would be danger of a collision of the train with individuals, or their horses, carriages, or teams. The bell is required to be rung for the distance of eighty rods before coming to such crossings. From the usual speed with which trains move, the time between the first signal from the bell, till the engine would cross the public highway, would be barely sufficient for reasonable notice to persons approaching such crossing—from thirty to forty seconds. It is quite evident that it could not have been intended to warn people elsewhere. At such places it was necessary to give notice to travelers approaching the place of crossing, and before they were upon the track, that they should not venture there while the train was approaching: and the bell was required to be sounded that they might have such notice. But the other provision of the act contained in section 4 is still more positive. The sign is to be placed at the highway, and at the place of crossing. It is to be in large letters, so as to be most likely to attract the attention of a passing traveler, and which he could not well fail to see. It is provided that it shall be placed so high as not to obstruct travel, and at such height as to be easily seen by travelers; and other language would have been used, if the act had been designed for the benefit of persons upon the track of the railroad at other places than the crossing of uch highway.

We are all of opinion that this enactment was not for the benefit of persons in the situation of the plaintiff, and that the direction given to the jury was, in this regard, erroneous; and for that cause the verdict rendered for the plaintiff must be set aside.

A new trial in this case would be of no service to either party. The plaintiff counts upon the neglect of a duty prescribed by statute, and upon that alone; and that duty not being enacted for his benefit, he cannot claim damages for the neglect of it and can have no right to recover against the defendant, and for his cause.

Railroad Earnings--Weekly.

The Toledo and Wabash Railroad earned the

3d week of August, 1862	$37,004 50
Do., 1861	30,164 91
Increase	$6,839 59

The receipts of the Grand Trunk Railway of Canada for the week ending August 16, were:

1862	$56,311 40
1861	51,141 59
Increase	$4,669 81

The earnings of the Chicago, Burlington and Quincy Railroad Line (310 miles) in the 2d week of August, 1862, were $53,491 34 against $41,163 22 for corresponding term in 1861, showing a gain in 1862 of $12,328 12.

The traffic of the Great Western Railway o Canada for the week ending August 15, 1862, was as follows:

Passengers	$18,825 41
Freight and live stock	18,233 92
Mails and sundries	1,319 28
	$38,378 61
Corresponding week of last year	28,066 28
Increase	$10,312 32

The Galena and Chicago Railroad earned the

3d week in August, 1862	$28,950 14
Do., 1861	35,792 27
Decrease	$6,842 13

The Chicago and Rock Island Railroad earned

the 3d week in August, 1862	$28,692 00
Do., 1861	38,363 70
Decrease	$9,491 70

The Michigan Southern Railroad earned for the

3d week of August, 1862	$53,038
Do., 1861	38,777
Increase	$14,261

The Cleveland and Toledo Railroad earned the

3d week of August, 1862	$18,932 00
Do., 1861	15,329 00
Increase	$3,603 00

The traffic of the Northern Railway of Canada for the 2d week in August, 1862, was:

Passengers	$1,891 14
Freight	6,620 19
Mails and sundries	100 92
Total	$8,612 55
Corresponding period, 1861	9,271 41
Increase	$659 06

The Michigan Central Railroad earned in the

3d week of August, 1862	$48,015 48
Do., 1861	31,507 47
Increase (equal to 55 per cent.)	$17,508 01

Financial Strength of the North.

It is only in adverse circumstances, or when the exigency far exceeds previous estimate or calculation, that we can judge correctly of a nation's strength. If ours has not been in the former, it certainly found itself in the latter category. Burdens tenfold greater than those supposed in the outset to be adequate to the crises have, at successive stages, been assumed; but with the last, our people were never more strong and hopeful, and really never more prosperous. Few wars in modern times have been more collossal in their proportions; yet none at all approaching it in magnitude, have been followed by consequences so little detrimental to the general welfare. Food, clothing and labor are as abundant as ever at the North—three crowning tests of national prosperity. The productiveness of its people was never so great. The crop of the North, the present year, exceeds that of any previous one; and as we are an agricultural people, all our industries consequently were never more profitably employed. All this prosperity follows immediately upon the excision, and as far as their commerce was concerned, of the practical annihilation of one-third of the States, whose commercial and manufacturing wants were almost wholly supplied by the North. But the disappearance of the rebel States, with their great staple, which they unhesitatingly confided in as the most potent power in the world, has not, in a perceptible degree, weakened the financial strength of the North, while the ease with which it has carried the burdens imposed upon it, has demonstrated this strength to exceed vastly, not only the estimate of the most sanguine among ourselves, but has excited the astonishment, and shut the mouths of those who predicted, because they desired, our speedy collapse. We have, consequently, achieved a victory of far greater value than mere success in the field. This in the outset may be no indication of the final result—it may be due to skill and enterprise of a leader on the one side, or imbecility and incapacity on the other. Such matters may be only accidents, which are corrected as affairs progress, and when real strength can be brought into action against decided inferiority. Results are then graduated just to the degree of the resources and ability that either party can bring into the field.

Whatever construction consequently may have been put, so far, upon the events of battles, or of military operations, the North has steadily gained in moral position, and in the respect entertained for it by Foreign Powers. Their journals may depreciate, as much as they please, our military capacity, but they well understand that our *material* is of the finest quality, and that we have really displayed much greater military aptitude, and achieved greater success, than have European nations, when first plunged into hostilities after long periods of peace. We are every day gaining upon their confidence and respect. But this is not the only, nor the greatest achievement of our people. The war has disclosed an unity—a *nationality* among them, such as has existed, under similar circumstances among no others—for the reason that this nationality is based upon the idea that society and government as they exist at the North, are organized in a manner so as to promote, in the highest degree, the welfare of every member and subject of them. Where such conviction is deep-seated and universal, no possible cause of internal discord exists. There is, in fact, the most intimate and necessary relation between the prosperity and internal harmony of the North. The one is only a sequence of the other. The connection between a good government and a favorable material condition is fully seen, and society is never ungrateful to its benefactors, when the benefits they confer are appreciated. It is not a case where envy or jealousy ever came in to mar the universal sentiment of gratitude and respect.

The fact of our commercial strength, as well as its source, is coming to be palpable to all. But there are abundant proofs beyond those already cited. At the outbreak of the rebellion it was to be expected that securities of all kinds should undergo a fearful decline. The nation was, for a time virtually broken in two. From that moment a new path and a new experience was entered upon. Every possible contingency in the future suggested itself to the public mind. Would not disintegration go on till no two States or communities would be left together? If so would securities or property even retain any value? The mere entertaining of such questions could not have any other effect than that of depreciating in an extraordinary degree the market value of such securities and property. The period of depression necessarily continued till the converse of the proposition presented to the public mind—the probable destruction of the government with all the terrible consequences flowing from such a catastrophe—was fully shown. It could not, and ought not to be taken for granted, but must be left to the course of events, which

since the outbreak, has been one of steady demonstration, that we were what we wished to be—a nation, possessing every element of material strength, and to a degree possessed by no other people; and every condition and attribute of internal quiet and order. Confidence gradually manifested itself, as conviction grows out of indisputable evidence. Prices steadily, though slowly, improved, as one element after another upon which values are based, were found to be in our favor. In this way, by the slow and tedious, but safe process of demonstration have we very nearly reached the place from which our people were so rudely hurled when the rebellion broke out. We shall soon wholly regain it, and reach in the end a much higher one, because we have established what before was only assumed in our favor—genuine strength, and all the conditions of a compact nationality under circumstances the most adverse. The grand thermometer—prices at the Stock Exchange—already records and certifies the truth of the views expressed. Prices will continue to advance, till there shall be a complete harmony between the law of our strength, and the public sentiment in reference to it—a harmony as yet by no means reached.—*Hallett's Financial Circular.*

Great Western Railway of Canada.

Mr. Thomas Swinyard, assistant to Mr. Cawkwell, of the London and Northwestern, has been appointed general manager of the Great Western of Canada, Mr. Brydges having accepted the more lucrative and onerous engagement of General Manager of the Grand Trunk. There will be but one opinion as to the fitness of Mr. Swinyard for this important post, the universal testimony of every one who has been brought into official communication with him concurs in admitting that a calm demeanor and deliberate judgment, with an experience of fifteen years in railway affairs, joined to great natural abilities, specially qualify him for this office. We have reason to know that he was appointed to this situation solely on the strength of the favorable testimonials forwarded to the board from the London and Northwestern as soon as it became known he was a candidate; and we feel convinced, from our knowledge of Mr. Swinyard, that he will assume the duties of his office with a mind perfectly unprejudiced, and with no peculiar views of his own, other than his judgment may determine to be necessary, and as occasions arise, so as to forward the interests of the Great Western of Canada to the best of his abilities.—*London Railway Times.*

New York Canal Tolls.

The following is a comparative statement of the tolls collected on the state canals, showing an increase thus far this year over the receipts for the same period last year of nearly a million dollars:

Receipts 1st week in August, 1862	$132,279 68
Do. in 1861	100,202 78
Increase	$32,094 95
Receipts 2d week in Aug. 1862	107,046 72
Do. in 1861	86,588 41
Increase	$20,458 31
Receipts 3d week in Aug., 1862	202,905 78
Do. in 1861	126,659 69
Increase	$76,246 09
Total receipts from May 1st to August 22d, 1862	$2,595,336 90
Do. in 1861	1,759,615 10
Total increase	$835,721 10

During the first and second weeks in August, 1862, navigation was suspended on the Western Divisions of the Erie Canal about seven days, in consequence of the break at Knowlesville.

Value of imports at New York from foreign ports for seven months:

	1860.	1861.	1862.
First quarter	$64,692,800	$61,366,400	$45,222,800
Second quarter	53,005,300	42,485,400	39,537,600
July	24,821,600	14,909,000	20,353,200
Total	$142,519,700	$118,760,800	$105,413,600

Summary of imports at New York from foreign ports for seven months:

	1860.	1861.	1862.
General merchandise	$74,087,600	$46,174,100	$63,076,900
Dry goods	63,990,400	31,515,000	30,185,200

Advance in Railway Freights.

The following are the new rates of freight which went into operation at Cincinnati on the 20th inst.:

Pacific Railroad.

The Leavenworth, Pawnee, and Western Railroad Company, we understand, have put under contract 350 miles of the Pacific Railroad to responsible contractors, the road to run from the Missouri River on to the 190th meridian, and the work to commence the 1st of October. The Directors of the Pacific Railroad, appointed by Congress, will meet at Chicago on Tuesday next.

☞ Railroad Companies will oblige us by sending us copies of their Reports, as soon as they are issued.

AMERICAN RAILROAD BOND LIST.

(*) signifies that the road is in the hands of receivers. (†) that the company is in default in its interest. S. F.," Sinking Fund. "var," that the bonds fall due at different periods

American Railroad Journal.

Saturday, August 30, 1862.

Stock and Money Market.

During the past week the stock market has experienced few fluctuations, the movements being on the whole favorable. To day (Thursday) prices are firm, with a slight declinetoward the close of the first Board, occasioned by rumors from Washington. United States sixes due in 1881 are 101½; seven and three-tenths treasury notes, at 104½; Custom House demand notes, at 107½; United States fives, at 90½. These figures show an average gain of fully one per cent. during the week.

Should political events become more favorable, we may expect the five-twenties to advance sufficiently to warrant the conversion into that class of securities of large sums of government currency, which has just recommenced. But late events, whatever may be their ultimate bearings, have not exerted as favorable an influence as is desirable.

Under the improving receipts of our railroads the value of their stocks and bonds has materially improved of late. The most noticeable advancement appears to have been in the Pittsburg, Fort Wayne and Chicago. Within a short time the stock of that road has risen from 30 to 39; the first mortgage, from 90 to 97; the seconds, from 77 to 84, and the thirds, from 50 to 62. It is stated that the people of Pennsylvania are purchasing largely the securities of that great and important line. It is estimated that the net earnings this year will pay twice the amount of the bonded debt. Other stocks have also experienced a considerable rise. Erie (Common) is 39, against 37¾ on the 21st. Erie Preferred, 69½, against 67¾; Central, 94⅜, against 92⅞. Hudson River, 54⅜ against 48¾. The last of these is nearly equal to the rise in Pittsburg, Ft. Wayne and Chicago, and is due to the remarkable growth in its business the present year. Galena and Chicago is 74, against 72½ on Thursday week. Michigan Central has advanced 2 per cent.; Michigan Southern, fully 2½; Cleveland and Toledo, 1½; Chicago and Rock Island, 1½, and so on. The bonds of these and other roads have sympathized with the rise in their stocks.

In gold there has not been much alteration, the rates being on the whole slightly more favorable. By this we mean a decline in price as compared with currency. The rate is now 115¼ to 115½, advancing or receding with the course of political events. It will puzzle an ordinary calculator or observer of events to assign any valid reason why the precious metals should continue to hang so fixedly about fifteen per cent above the par of currency, which is equal to a six per cent security with interest payable in gold. In our bank vaults specie is slowly but steadily on the increase, the amount at the close of last week being $35,588,486. With diminishing exportations to Europe there can be little doubt that this treasure will keep on accumulating. The deposits are increasing still more rapidly, and now amount to $143,347,340 *net*, an increase of one million and a quarter during the past week. These are still pouring in at a corresponding rate. It is evident that this flood of money cannot remain much longer pent up in Wall street; but must take some outward direction, whether that shall be toward government securities, the stocks and bonds of public works, real estate, or all together. In the manufacturing and commercial lines we do not anticipate any great changes from the present state of things until the return of peace.

The rates of money are still from four to five per cent for first class paper. Lenders are not so particular about the length of time as about the character of the borrower. Considerable sums are now being received on deposit at four per cent by the general government; and from present appearances will increase for some time to come. But so much depends on the course of political events that no one feels safe in forecasting the weather on 'Change more than twenty-four hours ahead.

A Railroad Clearing House.

The want of a building or block of buildings in this city, where the different railroad companies keeping agencies of any kind might have their offices, has long been felt, and occasionally made known. It seems passing strange that no steps should have been taken up to this time to remedy the great disadvantage of having those offices sprawling all over the lower parts of the metropolis instead of bringing them together, where a unity of interest would arise out of their proximity and mutuality of dependence. So long as they remain apart, as at present, they will possess a smaller portion of the *esprit du corps* than is desirable and indeed necessary, if they are not to continue to work to the injury of each other. Silly competition, jealous rivalries have been productive of mischiefs enough, in all con-

science, to warrant a different course for the future. If such is to be the case it should be accompanied by the opening of some grand Temple of Concord, in which managers and employees could have an opportunity of coming together and devising measures for the common welfare of those lines which they represent.

For the sake of the traveling public would we also urge a movement of the sort. The millions of our citizens and strangers who are annually on the move, would find it a very great convenience to have one common depot established where every kind of information could be instantly obtained, instead of being obliged to roam from place to place at the sacrifice of time, means and temper—at the sacrifice, too, of the *disposition* to travel; since every obstacle in the way is so much friction that requires to be overcome. But if at the great central headquarters knowledge of routes, fares, and the like could be obtained without encountering existing difficulties, an important stimulus to travel would be at once communicated to all who desired to enjoy that intellectual gratification.

The conveyance of baggage and the lighter kinds of freight might, it appears to us, be also made less liable to loss or other risk, thus proving another benefit to the community and indirectly contributing to the prosperity of our railroads.

With a single block of offices forming a common centre, business of other kinds, such as telegraphing, expressing, etc., would be attracted also in a mass to the same locality, thus further simplifying the machinery and cost, both to the companies themselves and the people whose patronage they enjoy.

There is still another and perhaps more important object to be secured by such an establishment. In the course of time a great Railroad Clearing House would probably grow out of it, with its daily settlements of shares and bonds sold or otherwise disposed of. With such an arrangement, it is evident, attempts at issuing fraudulent stocks, etc., would be futile, since they would be instantly checked and exposed. It is true such fraudulent forgeries as were discovered in 1854, do not appear to have been attempted lately; still, with sufficient relaxation of vigilance we may have a repetition of them at any time. It is perilous to create another of those panics, arising from loss of confidence, such as was witnessed eight years ago; and if, as we believe, a plan somewhat resembling that of our Clearing House for the Banks could be put into operation, there is every reason to hope that it would prevent the possibility of such an occurrence, at least on a large scale.

It is not our object to advocate the selection of any particular locality or site, nor are we prepared to suggest the best method of carrying the plan into effect. Enough that it is advantageous, combining with good service to the public a saving in expense to the companies; that it is perfectly feasible at any moment when the right kind of men shall undertake its accomplishment. Let the managers of our principal lines take the initiative, and others will doubtless be ready to second them, when they observe the common benefits arising from this "change of base."

It is also exceedingly desirable, though not to be expected at present, that all the railroads in the country should furnish monthly reports of their business to such a headquarters as we have recommended, giving the public the latest and fullest information in regard to traffic receipts, expenses, etc. In Great Britain this has been provided for by act of Parliament; but as our railroad companies are chartered by State Legislatures, it will be more difficult to bring such a common influence to bear upon them. In the absence of this, public opinion may be exercised with effect. But this is a remoter consideration than the establishment of a central set of offices And by the way we suppose there are few large cities on this continent or in Europe where the railroads entering them are so poorly supplied with office and depot accommodations. To carry such an arrangement into effect there would have to be an exceedingly slight sacrifice of those already provided for that especial purpose. The lines entering New York cannot always remain with their present shabby and inconvenient structures as offices. Now is the time for them to move on behalf of buildings, whether owned or leased, that shall enure to the benefit of the whole interest.

Controller Haws invites proposals for a loan of $250,000 Croton Water stock till September 25, 1862. This will be redeemed November 1, 1883 and will bear six per cent interest, payable quarterly.

Detroit and Milwaukee Railway.

The 1st Report of the Committee of 1st and 2nd Mortgage Bondholders, appointed by Resolution of a meeting held at No. 6, Old Jewry, London, on the 23rd of May, 1861, when it was resolved as follows:—

"That a Committee of Bondholders be appointed to communicate with, and if necessary assist, the Trustees appointed under the recent arrangement, and to examine the accounts from time to time, and generally to take such steps as they may think necessary or proper for the protection of the interests of the Bondholders; and that the Bondholders present constitute such Committee, with power to add to their number. That Messrs. John Dillon, William Austin, W. D. Starling, W. H. Barlow, and William Quilter, be requested to act as a Sub Committee to carry out the details, three of them to form a quorum."

In the last report of the Directors of this Company, which accompanied the accounts up to the end of 1861, it was stated that a further funding of coupons for another year will be required, in order to clear off the balance of the debts, and complete certain necessary works. In default of payment of the next coupons, which will become due in New York 15th November next, the bondholders will be entitled to foreclose; but experience has shown that no good can be done in such cases by individual action; and further, that it is always in the power of opposing parties to prolong proceedings almost indefinitely in the American Courts, where, of necessity, action would have to be taken. Under these circumstances, the Committee have corresponded with the Board in Detroit, with the view of coming to an arrangement for the institution of a friendly suit in November next, in which the usual decree shall be taken at the earliest moment; but with an understanding that the proceedings under it shall be suspended until November, 1863, and the committee are happy to be able to report that the board have acceded to this suggested course, the effect of which, if carried out, will be that in case of default in meeting the coupons due in November, 1863, *i. e.* the next which will become due after the expiration of another year's funding, the decree in the suit would immediately thereupon become operative. This is a result which could not be obtained at an earlier (if so early a) period by hostile proceedings.

Between hostile litigation and a friendly arrangement, such as has been suggested, there is this important distinction, that the pendency of a hostile suit, for whatever time it might be prolonged, would demoralise and disorganise the working of the line, all which will be avoided by the course suggested. The committee have no hesitation, therefore, in recommending the bondholders generally to agree to fund their coupons for another year, on the proposed arrangement being carried into effect. While the Committee have abstained from interference with the working arrangements of the line, they have from time to time to correspond with Mr. Brydges as to the accounts and financial arrangements. They also had an interview with that gentleman when he was in England, in December last, and they have much pleasure in expressing their satisfaction with the frankness and fulness of Mr. Brydges' explanations on all matters; and they also testify, so far as their means of judging extends, that the funds of the Company have been faithfully administered, in accordance with the arrangements embodied in the mortgage deed of the 15th November, 1860. It appears by the last report of the Directors, already referred to, that the net revenue for 1861 was sufficient, within the small sum of $12,376, to meet all the interest charges on bonds and mortgages. The gross traffic for 1862, as compared with 1861, appears by the last returns to have been, thus far, as follows:—

1862	£69,919
1861	58,683
Balance in favor of 1862 up to July 3	£11,236

Mr. Brydges, in his last letter, dated June 30th, 1862, writes as follows:—"I enclose you statements of the receipts and expenses of the Detroit and Milwaukee Railway for the months of March and April. The traffic is continuing good, and I see no reason to doubt the correctness of my former statements that by the 15th of May next the Company will be free from its financial troubles. The only difficulty which can arise is one over which we can have no control, and that is, the extraordinary financial position into which matters are getting in the United States. What the result of them is going to be I shall not attempt to prophesy."

Mr. Brydges' conection with the Great Western of Canada has now ceased, he having accepted the general managership of the Grand Trunk of Canada. A new manager of the former Company has been appointed, and it has been thought judicious for the present that Mr. Brydges should still retain his position as President of the Detroit and Milwaukee Railway Company. By the reorganisation arrangements carried out in 1860, the principal voting powers are now vested in the Great Western of Canada, whose large advance to this Company were then converted into a preference stock; till the rights which the bondholders will acquire in consequence of the inability of the Company to meet the coupons becoming due in November next, will entitle them to a voice in any arrangements which may now be made with reference to the future management of the line. One mode of securing this will be to appoint a London Committee, consisting of—say three bondholders, to act jointly with three members of the board of the Great Western of Canada; this committee would be able to exercise an effective control over the management of the line, which a mere committee of bondholders, having no legal powers, could not alone do, as well as obtain direct and frequent communication on matters relating to the Company. The committee submit for the consideration of the bondholders are port on the condition of the line which they obtained last year from Mr. W. Pare, a gentleman well known in connection with railways, and who was then in Canada on the business of another railway Company. His opinion as to the position and prospects of this line will be found highly satistory and assuring.

REPORT OF MR. WILLIAM PARE, ON THE LINE.

Toronto, 23rd July, 1861.

Having read the papers you sent me in the above, and others obtained on this side, including the letter of the President, Mr. C. J. Brydges, to the Bondholders and other creditors of the Company, dated October 24th, 1860, and print of the mortgage deed, published 1st January, 1861, and having had interviews with Mr. Brydges and Mr. Trowbridge, as reported in my letter to you from Chicago, of the 4th inst., I crossed Lake Michigan from Milwaukee in the steamer Milwaukee, after an interview with Mr. W. Graham, the freight agent of the Company in that city.

The boat and all its appointments are first class, and it is certainly well arranged for both passengers and freight.

Arrived at Grand Haven, I found some pretty extensive works going on, in the nature of piling, at the east or land end of the jetty or pier, which has been thrown out on the south side the entrance into the river from the lake. Upon inquiry from Captain H. Squire, the station master, he informed me that considerable damage had been done when the ice broke up this spring, undermining a great sand hill on this side the entrance to the railway terminus from the lake, and bringing down such large masses of sand as to completely block up the harbor, and render it inaccessible to their vessels in the months of April and May. I was subsequently informed by Mr. Trowbridge, that the works I saw in progress, and which were undertaken to prevent the like occurrence again, were being executed by contract, and would cost about $6,000. I learned from him, too, that the northern pier which is contemplated, but for the present is in abeyance, will cost $50,000.

I think, from the extensive shifting sands at Grand Haven, the probability is that in a series of years the necessary expenses at this end of the line will be large.

In travelling in the cars from Grand Haven to Detroit (186 miles), I noted that the line seems to have been originally well located and well graded. There are no deep cuttings, heavy embankments, or viaducts, or bridges of an expensive character. For very many miles together, and occurring frequently, the line is straight as an arrow, in the States called "air line," the gradients extremely easy, and the rails all but on the surface. Around the principal curves (very few) there is the extra caution, rarely adopted, of a guide rail, to prevent the engine and cars leaving the track. By far the larger portion of the line—I think I am right in saying with the exception of about a dozen miles—is laid with a good heavy T rail, fished at the joints, and the whole is fenced by a good snake fence, in prime order. The trains are good; the sides of the culverts of wood baulks, which I know are proposed by high authority here, as being better for this climate than brick or stone. The line is well ballasted, speaking generally, much better so than some 2,000 miles of railway I have been over in Canada and the States; for about nine miles east of Grand Haven this is of sand, all the rest is of excellent gravel, and the ties, or sleepers, are well bedded in it. The exception to this only extends over a few miles, and attention seems to be directed to it, as also to the gradual substitution of gravel for sand at the western extremity of the line; but the nearest point at which it can be obtained for this latter purpose, as I was informed, is at Roeb, 30 miles distant, so that the lead is considerable. The land on either side the line is very fertile, and is to a very considerable extent settled and settling. From Ionia, 124 miles west of Detroit, the "way" traffic is the heaviest, and keeps accumulating until Detroit is reached. For about one-and-a-half miles at this end the line runs through and on a level with the street, which, although not fully populated, is sufficiently so to render the working of the trains somewhat dangerous to life and property. I should be taxed to find a similar instance anywhere, and I conclude there must have been some good reason for selecting this entrance into the town, seeing that there are serious inconveniences, not to say heavy expenses, from the continual risk of accidents. The station expenses at Detroit are shared with other Companies, but the station is somewhat confined, and for modern times, incommodious. The line is worked by electric telegraph and semaphore signals at the stations, and, so far as I had the opportunity of observing, is very efficiently worked. Speaking of the line in its entirety, it is, in its original conception and construction, second to none I have travelled over on this Continent, and far surpasses almost all. It is, too, maintained in high order; but to do this, if done regularly and systematically, should not be a heavy, but comparatively with other lines, a light expense. I was informed that the complement of labor for maintenance of permanent way was four tracksmen to every six miles.

The facts I have just adduced as to the permanent way, coupled with others—as, for instance, the average price of cord-wood fuel is one dollar per load only, or 30 per cent. less than some other lines in the locality—afford reasonable proof that this line can be cheaply worked.

As to the receipts, the passenger traffic this year has fallen off considerably, in consequence, Mr. Graham and Captain Squier told me, of the "currency difficulties" incident on the war in the States. The freight has been, according to the same authorities, three times greater this year than last, and they expect a heavy trade this fall. It would have been far larger in the first half but for the sand-slip. An immense quantity of freight, chiefly grain, had been stored against the breaking up of the frost, which was obliged to be sent eastward by other routs, in consequence of the vessels not being able to make the station at Grand Haven. As to the total half-year's revenue, the secretary, Mr. Trowbridge, said it exceeded the corresponding period of 1860 by 15,000 dollars, and that, but for the obstruction I have named, it would have exceeded it by 100,000 dollars more.

As to the proportion of working expenses to gross receipts, Mr. Brydges told me it would be about 60 per cent., and this was confirmed by Mr. Trowbridge.

You will observe by a "circular" dated "February, 1861," and bearing the signature of William Graham, as agent to the Company, and which was handed me by him, that the Company contemplate building "two first-class propellers," so as to meet the exigencies of the trade next winter.

It seems to me that the most serious contingency of this concern is the harbor works, at Grand Haven. I should say these works are likely to tax the skill of an experienced hydraulic engineer.

I am, &c.,

WILL. PARE.

—*Herapath.*

The French System of Drafting.

Under French law every birth in the Empire must be registered within forty-eight hours, under pain of severe penalties for any attempted violation of the code. France is divided into 40,000 communes, each of which has a Mayor, holding his appointment from the Department of the Interior at Paris—which, by the way, is in all respects the most important branch of the French Government. It is in presence of the Mayor that births are declared and formally placed upon record for future reference and use. The law requires that the child shall itself be brought before the civic functionary, the full names of the infant given, the names and condition of both parents, when known, given, also the sex of the child declared, and all the facts certified to by two credible witnesses, whose names, residences and occupations are also carefully recorded.

It will be seen at a glance that the information thus obtained is of immense utility to the Government, in conducting the operations of the conscription, whose mechanism may be described in a very few words: The Government calls for a contingent, let us suppose, of 100,000 recruits, for 1862. The Legislative Body authorizes the levy to be made. Each department of the Empire, of which there are now eighty-nine, is required to furnish a quota, based upon the amount of its population. The Mayors hold lists of all individuals born in their respective communes, and notifications are sent to every male child borne in 1842 (the drafting age being twenty years,) that he is to present himself on such a day, at the *mairie*, to take part in the drawing. This notification is a mere formality, as every young man knows when he will be required te come forward, and it frequently happens that youthful Frenchmen, residing abroad, return to their native land at this period, for the special purpose of fulfilling ing a duty, which, if they chosed, might be readily avoided, by simply remaining out of France.

To illustrate the mode in which the drawing takes place, we will suppose that a particular commune is required to furnish 100 conscripts—the total number of eligible young men being say 500. Five hundred bits of paper are placed in an urn, of which four hundred are blanks, and the remainder, marked from one to one hundred, oblige their holders to "fall in." The 400 who have escaped are now exempt from military service, unless some extraordinary event—such as an invasion of France—should demand the calling out of the entire arms-bearing population.

The mode of raising recruits, as has been seen, is simple enough—all being afforded a fair chance. As regards exemptions the French system is scarcely less simple. In the first place, the conscripts undergo a rigid medical examination, and if any are found laboring under physical disability they are at once discharged. Next in order are the exemptions of *soutiens de famille*, or individuals with families dependant upon them. Thus the only son of a widowed mother is exempted. So also is the only brother of an orphan sister. Brothers of a soldier still serving in the army are exempted until the latter's term shall expire, only one of a family being drawn at one time. A wife cannot exempt her husband, even if there be children, as the law holds that young men ought not to marry until they have fulfilled their military obligations to the State.

A last class of exemptions has a pecuniary feature. In former years—that is to say, up to 1856—no conscript not exempt by physical debility, or by the other causes above enumerated, could escape service, except by procuring a substitute. This had given rise to a degrading species of trade or speculation, in which large numbers of man-sellers and buyers were engaged. But, under the system referred to, the conscript who bought a substitute was *responsible for his substitute*, and if the latter deserted or *died*, before the expiration of the seven years' term, was liable to be forced back into the ranks. This system was abolished in 1856, by order of the Emperor, and the Government itself accepts pecuniary indemnity for the withdrawal of a conscript, and practically pays for his substitute by offering an ample bounty to volunteers. It is arranged that the sum received and paid by Government shall vary according to the military exigencies of the country, but the present basis is as follows: A conscript is exempted for 2,400 francs ($480), and the Government pays a bounty to volunteers amounting to 2,200 francs ($440), making a profit of 209 francs by the exchange.

The Eighth Census.

The following is a continuation of the preliminary chapters of the Census Report of 1860, now in course of preparation at Washington, under the direction of Jos. C. G. KENNEDY, Esq.:

THE SEWING MACHINE

has also been improved and introduced, in the last ten years, to an extent which has made it altogether a revolutionary instrument. It has opened avenues to profitable and healthful industry for thousands of industrious females, to whom the labors of the needle had become wholly unremunerative and injurious in their effects. Like all automatic powers, it has enhanced the comforts of every class, by cheapening the process of manufacture of numerous articles of prime necessity, without permanently subtracting from the average means of support of any portion of the community. It has added a positive increment to the permanent wealth of the country, by creating larger and more varied applications of capital and skill in the several branches to which it is an auxiliary. The manufacture of the machines has become one of considerable magnitude, and has received a remarkable impulse since 1850. The returns show an aggregate of 116,330 machines made in nine States in 1860, the value of which was $5,605,345. A single establishment in Connecticut manufactured machines to the value of over $2,700,000, or nearly one-half of the whole production in that year. During the year 1861 sewing machines to the value of over $61,000 were exported to foreign countries. It is already employed in a great variety of operations and upon different materials, and is rapidly becoming an indispensable and general appendage to the household.

CLOTHING.

Among the branches of industry which have been signally promoted by the introduction of the sewing machine, is the manufacture of men's and women's clothing for sale, which has heretofore ranked with the cotton manufactures in the number of hands—two-thirds of them females—and the cost of labor employed. The increase of this manufacture has been general throughout the Union, and in the four cities of New York, Philadelphia, Cincinnati and Boston, amounted in value to nearly forty and one quarter millions of dollars, or over eighty-three per cent of the product of the whole Union in 1850. The manufacture of shirts and collars, of ladies' cloaks and mantillas—a new branch which has received its principal impulse within the last ten years—and of ladies' and gentlemen's furnishing goods generally, form very large items in the general aggregate of this branch. They severally employ extensive and numerous establishments, many of them in large cities with heavy capital. In Troy, New York, the value of shirt collars alone annually manufactured is nearly $800,000, approximating in value to the product of the numerous and extensive iron foundries which have been a source of wealth to that city.

COTTON GOODS.

Among the great branches of pure manufacture in the United States, that of cotton goods holds the first rank in respect to the value of the product and the amount of capital employed. Aided by the possession of the raw material as a product of our own soil, and by the enterprise and ingenuity of our people, this valuable industry has grown with a rapidity almost unrivalled.

The total value of cotton goods manufactured in New England was $80,301,535, and in the Middle States $26,272,111—an increase of 83.4 per cent in the former, and 77.7 in the latter. The remaining States produced to the value of $8,564,280, making the whole production during that year $115,137,926, against $65,501,687, the value of this branch in 1850, or an increase in the general business of nearly 76 per centum in ten years. In the States of Maine and New Jersey the manufacture increased in the same time 152 per cent; in Pennsylvania, over 102 per cent; in New Hampshire and Connecticut, over 87 per cent; in Massachusetts, nearly 68 per cent, and in Rhode Island 88.7 per cent. The total production in this branch was at the rate *per capita* of $3 60 for every individual in the Union, equivalent to 46½ yards of cloth for each, at the medium price of 8 cents per yard. The average product per head in 1850 was 36¼ yards. The increase alone has therefore, been at the rate of 11 yards for each person, or nearly equal to the average annual consumption *per capita* in 1860, when it was estimated to amount to 12 yards. The number of hands employed in the manufacture in 1860 was 45,215 males, and 72,605 females, an increase in the male operatives of 10,020, and in the female of 10,944 since 1850. The average product of the labor of each operative was $969. The number of spindles was returned at 5,035,798, being an increase of 1,402,105, or 38.5 per cent over the aggregate in 1850, which was estimated at 3,633,693. The New England States possess 3,950,297, or 78.6 per cent of the whole, while Massachusetts alone employes 1,739,700, or 29.3 per cent of the number returned in the Union. The increase of spindles in the last decade was, in New England, 1,208,219, or 30 per cent. In the State of Maine, 186,100, or 163.3 per cent; in the State of New Hampshire, 229,484, or 52.1 per cent; in the State of Massachusetts, 451,609, or 35 per cent; in the State of Rhode Island, 141,862, or 22.7 per cent, in the State of Connecticut, 211,188, or 83.1 per cent; while in Vermont it exhibited a decrease.

The product per spindle varies in the different States, partly accounted for by the fact that many manufacturers purchase yarns which have been spun in other States.

The product of cotton goods per spindle is as follows:—In Maine, $22 12; Massachusetts, $21 12; New Hampshire, $24 87; Vermont, $18 13; Rhode Island, $16; Connecticut, $16 46. The average in the New England States is $20 30; in the Middle States, $30 48, and in the whole Union $22 86.

The quantity of cotton used in the fabrication of the above goods was 364,036,123 pounds, or 910,000 bales of 400 pounds each. Of this amount the New England States consumed 611,738 bales, and Massachusetts alone 316,665. The consumption per spindle in that year in the various States and sections was as follows:—

	No. spindles.	Lbs. cotton.	Lbs. per spindle.
Maine.....	300,000	23,438,723	78
New Hampshire.	669,885	39,212,644	58.5
Vermont	19,712	1,057,250	53
Massachusetts ..	1,739,700	126,666,089	72.3
Rhode Island ...	766,000	38,521,608	50.2
Connecticut	464,000	15,799,140	34
In New England..	3,959,297	237,844,854	61.8
In Middle States .	861,661	76,055,666	88.26
In United States .	5,035,798	364,036,123	72.2

When we consider the large number of hands, and especially of women and children, who find employment in this business, the quantity of raw material, of machinery and of fuel, exclusively of American production, employed in this branch, and the amount of comfortable clothing and household stuffs supplied at cheap rates, or the amount it contributes to the internal and foreign commerce of the Union—its progressive increase is a subject of the highest satisfaction, and its growth here and abroad is one of the marvels of the nineteenth century.

WOOLLEN MANUFACTURES.

The returns of woollen manufactures show an increase of over fifty-one per cent in ten years. The value of woollen and mixed goods made in 1850 was $45,281,764. In 1860 it amounted to $68,865,963. The establishments numbered 1,909, of which 453 were in New England, 748 in the Middle, 479 in the Western, 2 in the Pacific and 227 in the Southern States. The aggregate capital invested in the business was $35,520,527, and it employed 28,780 male and 20,120 female hands, 639,700 spindles and 16,075 looms, which worked up more than eighty million pounds of wool, the value of which, with other raw materials, was $40,360,300. The foregoing figures include satinets, Kentucky jeans and other fabrics of which the warp is cotton, though usually classed with woollens. In the manufacture of these mixed goods the amount of cotton consumed is 16,008,625 pounds, which, with 364,036,123 pounds, used in making cotton goods, as previously stated, amounts to 380,044,748 pounds or 959,112 bales, exclusive of a considerable quantity used annually in household manufactures and for various other purposes.

The largest amount of woollens was made in New England where the capital was nearly twenty millions of dollars, and the value of the product $38,509,080, but little less than the total value in 1850. More than half the capital, and nearly one-half of the product of New England belonged to Massachusetts, which had 131 factories of large size. Rhode Island ranked next, and had increased its manufacture 163 per cent in ten years, that of Massachusetts being 48 per cent. The value of woollens produced in the middle States was $24,100,488, in the Western $3,718,092, and Pacific and Southern $2,538,303. The sectional increase was in New England 52.1, in the middle States 54, and in the South 107, the last showing the greatest relative increase. Pennsylvania, next to Massachusetts, was the largest producer, having 447 factories, which made $12,744 373 worth of woollen and mixed fabrics, an increase of 120 per cent. A value of $.919,019 was the product of 222 establishments in the city of Philadelphia.

The State of New York holds the third rank in relation to this industry, its manufactures amounting to more than nine millions of dollars. The woollen manufactures of Maryland exhibit an increase of 86 per cent. In Ohio, which produced in 1850 a greater value of woollens than all the other Western States, there was a decrease on the product of 1850, owing, probably, to the shipments of wool to Europe, which, in 1857, was found to be the most profitable disposition of the rapidly increasing wool crops of that State. In Kentucky, now the largest manufacturer of wool in the West, the product was $1,128,882, and the increase in ten years 40.4 per cent; while in Indiana, which ranks next, it was 31 per cent, and in Missouri 18.8, on the product of 1850.

The extension of this important manufacture is a subject of great interest to the country, inasmuch as our climate renders woollen clothing necessary throughout a large part of the Union during much of the year; and because it would supply the best market to the wool grower.

The quantity of wool returned for the whole Union in 1850 was upwards of 52,500,000 pounds. Sheep raising has been greatly extended and improved since that date in Ohio, Texas, California and other States, and the clip in 1860 amounted to 60,511,843 pounds; an increase of 15.2 per cent in ten years. The yield still falls far short of the consumption, and large quantities continue to be imported, notwithstanding the amount of territory adapted to sheep husbandry.

LINEN GOODS.

The manufacture of linen goods has made but little progress in this country. A few mills, chiefly in Massachusetts, make crash and other coarse fabrics; the largest two in that State produced six million yards in 1860. Others are extensively engaged in making twines, shoe and other threads. It is to be regretted that the manufacture of flax has not attained greater magnitude in a country where the raw material is so easily and cheaply grown. Farmers throughout the West have raised the crop simply for the seed and thrown out the fibre as valueless.

FLAX COTTON.

The manufacture of fabrics from flax cotton has been commenced, and success in a new branch of industry is confidently expected. The inventive genius of our countrymen has perfected machinery for the preparation of flax for spinning, which can be furnished, it is alleged, at as low a rate as the product of Southern cotton fields.

SEWING SILKS.

The manufacture of sewing silks is extensively carried on in this country. Including tram, organize, &c., the production exceeded five mil-

lion dollars in the States of Connecticut, New Jersey, Massachusetts, Pennsylvania and New York, their relative values being in the order mentioned. Ribbons are made to a small extent, but the chief manufactures of silk consist of ladies' dress trimmings, coach lace, &c., of which the cities of Philadelphia and New York produce to the value of $1,260,725 and $796,682 respectively.

INDIA RUBBER GOODS

were made chiefly in Connecticut, New York, New Jersey and Massachusetts, to the value of $5,729,900—an increase of ninety per cent, in the last decade.

LEATHER.

The production of leather is also a leading industry of much importance to the agriculturist and stock raiser, as well as to the commercial interest, inasmuch as it consumes all the material supplied by the former, and feeds an active branch of our foreign import trade. The tanning and currying establishment of the United States produced in 1850 leather, exclusive of Morocco and patent leather, to the value of $37,702,333. The product of the same branch in 1860 reached $63,090,751, an increase of nearly 67 per centum. In the New England States it was $16,333,871, in the middle States, $36,344,548, and in the Western States, $5,986,457; being an increase of 66.6 per cent, 90.7 and 13.3 in those sections, respectively. The Pacific States and Territories (including Utah), which returned no leather in 1850, produced in 1860 to the value of $351,469. The largest producers of leather are New York, $20,758,017; Pennsylvania, $12,491,631; and Massachusetts, $10,354,056; an increase in those States of 111.7, 98.4 and 82.3 per cent, respectively. Including Morocco and patent leather the aggregate value produced in the Union in 1860 exceeded sixty-seven millions of dollars.

If we add to the sum total of this manufacture the aggregate value of all the allied branches into which it enters as a raw material, or take an account of the capital, the number of hands, and the cost of labor and material employed in the creation and distribution of its ultimate products, it is doubtful if any other department of industry is entitled to precedence over that of leather.

BOOTS AND SHOES.

The manufacture of boots and shoes employs a larger number of operatives than any other single branch of American industry. The census of 1850 showed that there were 11,305 establishments, with a capital of nearly thirteen millions of dollars, engaged in making boots and shoes to the value of $53,967,408, and employing 72,305 male and 32,948 female hands. The returns of 1860 show that 2,554 establishments in the New England States employed a capital only $2,516 less than that of the whole Union at the former date; and with 56,039 male and 24,978 female employees produced boots and shoes of the value of $54,767,077, or eight hundred thousand dollars more than the entire value of the business in 1850, and 82.8 per centum in excess of their own production in that year. Massachusetts increased 92.6 per cent., having made boots and shoes of the value of $46,440,209, equal to 86.6 per cent. of the general business in 1850. The State of New York returned 2,276 factories, with an aggregate production of $10,878,797; and New England, New York, Pennsylvania and New Jersey together produced $75,674,946 worth of these articles, being 40.4 per cent. more than the product of all the States in 1850, and 67.9 per cent. more than their own manufacture in that year. The three counties of Essex, Worcester and Plymouth, in Massachusetts, produced boots and shoes to the value severally of about 14½, 9½ and 9¼ millions of dollars. The largest production of any one town was that of Philadelphia, in which it amounted to $5,349,887; the next, that of Lynn, Massachusetts, was $4,867,899; the third, Haverhill, $4,130,500; the fourth, New York city, $3,869,068. The largest production of a single establishment was of one in North Brookfield, Massachusetts, and amounted to over $750,000. This establishment was the largest of five the same proprietors had in operation that year, the total production whereof was over one million pairs of boots and shoes, valued at over thirteen hundred thousand dollars. Machinery propelled by steam power is now used in many large manufactories with highly satisfactory results.

CABINET FURNITURE.

The value of cabinet furniture made in 1860 in the New England, Middle States and Ohio reached the sum of $19,553,734, an increase of 80.5 per cent. over the product of those States in 1850, and exceeding the production of the whole Union in 1850. New York returned in 1860 furniture of the value of $7,175,060 (or 40.6 per cent. of the whole amount made in 1850), Massachusetts $3,365,415, and Pennsylvania $2,938,503. The growth of this branch keeps pace with the increase of population and wealth, and serves to swell the amount of our exports. It gives employment at remunerative prices to skilled labor, which it attracts from the crowded labor markets of Europe.

MUSICAL INSTRUMENTS.

Our advance in wealth and refinement is attested by the rapid increase in the manufacture of pianofortes and other musical instruments. New England, New York and Pennsylvania produced musical instruments to the value of $5,791,807—an increase of 150 per cent. over their own production in 1850, and 124 over the whole value of that branch in the Union in the same year. New York alone made $3,392,577 worth—being $811,862 more than the whole amount returned in 1850. In this branch our manufacturers have achieved marked success. Without claiming for them superiority over their brethren in France and Germany, it is admitted that church organs and other instruments made in this country are better suited to the climate, and in other respects fully equal to those which come from the most celebrated establishments in Europe.

JEWELRY.

The increased amount of the precious metals and the greater ability of all classes to indulge the promptings of taste or luxury, have added greatly to the manufacture of jewelry, and of all kinds of gold, silver and plated wares. In the New England and Middle States, the production of jewelry and watches reaches nearly eleven millions in value; of silver, silver plated wares, &c., nearly six and one half millions; making over seventeen and a quarter millions of dollars, exclusive of gold leaf and foil, and the assaying and refining the precious metals, exceeding the product of the whole Union in 1850, by $6,312,500 in value; an increase of over fifty seven per cent., and of sixty-three per cent. on the production of those States in that year. The production of cheap jewelry has been greatly augmented by recent improvements in electro metallurgy.

AMERICAN WATCHES.

The manufacture of American watches, commenced within the last ten years in Boston as an experiment, has proved eminently successful. Unable heretofore to compete with the low priced labor of European workmen, our ingenious countrymen have perfected machinery by the aid of which watch movements are fabricated equal, if not superior, to the hand made. The continued growth of this branch will diminish the importation of foreign watches, and may, at no distant period, earn for our country a reputation in this manufacture equal to that she enjoys in the kindred branch of clock making. Gold and silver watches are now produced to a very large extent, chiefly in the cities of Philadelphia, New York and Newark.

CHEMICAL ARTICLES.

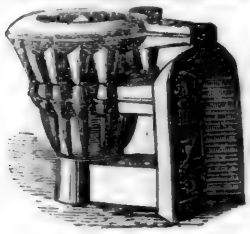
Improvements in technical chemistry have added largely to the number and value of its products. The manufacture of articles strictly classed as chemical, exclusive of white lead, ochres, paints, varnish, glue, perfumes, cements, pot and pearl ashes, &c., amounted, in 1850, to the value of nearly five millions of dollars. The production, in 1860, exhibited a considerable increase. This branch is susceptible of almost unlimited extension and application in the creation of commercial and useful articles from the refuse of every other manufacture, and the diversified products, vegetable, animal and mineral, of our own or other lands. Many of the chemical branches, apart from the money value of their manufactures, are of the highest economical importance to our country, as auxiliaries to almost every other industry of the people. Chemistry has as yet revealed but a tithe of the vast wealth of its resources.

GAS.

The manufacture and consumption of gas, for illumination and other purposes, which is one of the remarkable fruits of chemical science, has been greatly increased, not only in our Northern cities, but in the large towns and villages throughout the Union. The quantity returned is but four thousand million feet of the value of eleven million dollars, but the whole quantity made exceeded 5,000,000,000 cubic feet, the value of which was about thirteen millions of dollars.

SALT.

The making and refining of salt in the United States in 1850 employed 340 establishments, and the value of their production was $2,177,945. The four States of New York, Virginia, Ohio and Pennsylvania, which, in the order named, are the principal salt-producing States, made, according to the eighth census, nearly twelve millions bushels, the cost of which was $2 200,000, an average of about 18½ cents per bushel. Texas, Kentucky, Massachusetts and California are also self-producing States. About sixty per cent. of the whole was made in New York, at an average cost of 17 cents per bushel.



FISHERIES.

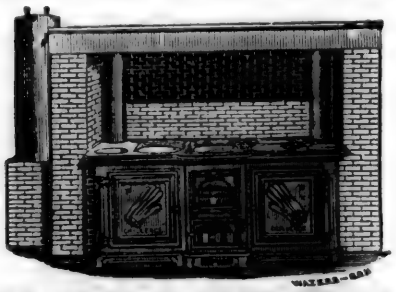
In the aggregate product of fiberies there was an increase of 28.5 per cent. over their value in 1850. The total value of the lake, river, shore, and deep-sea fisheries, including oysters to the value of $382,170, and $7,521,588 as the product of the whaling business, amounted in 1860 to $12,924,092. Of this amount $6,526,238 in the whale, and $2,774,204 in the cod, mackerel, halibut, and other shore fisheries, belonged to the maritime industry of Massachusetts, and constituted nearly seventy-two per cent. of the whole. This favorite occupation of her enterprising sons has made Boston, which has been over two and a quarter centuries engaged in the business, the principal distributing fish market of the Union, and has raised the port of Gloucester to the third rank among New England seaports in the amount of its foreign commerce. The latter has become the largest seat of the domestic fisheries in the United States, if not in the world, and distributes the products to all the large cities of the Union and to foreign countries.

The State of Maine holds the second place in respect to the value of its fishing interests, and returned $1,050,755 as the value of the cod, mackerel, herring, &c., taken by its fishermen. North Carolina had the largest shad fishery, amounting in value to $99,768. New Jersey, New York and Virginia took the largest amount of oysters, and Michigan returned the largest value in white fish, amounting to $250 567.

A slight decline in the value of the whale fishery arose from the increasing scarcity of the whale in its former haunts. The consequent deficiency of bone, teeth and oil, as raw materials, proved embarrassing to some branches of manufacture, particularly those employing whalebone. The scarcity of whale and other fish oils in the arts has been supplied by an increased production of lard oil, and especially by that beneficent law of compensation which prevades the economy of nature, and when one provision fails her children, opens to them another in the exhaustless storehouse of her material resources, or leads out their mental energies upon new paths of discovery for the supply of their own wants. Thus, when mankind was about to emerge from the simplicity of the primitive and pastoral ages, the more soft and fusible metals no longer sufficed for the artificer, and veins of ore revealed their wealth and use in the supply of his more artificial wants, and became potent agents of

his future progress. When the elaboration of the metals and other igneous arts were fast sweeping the forests from the earth, the exhaustless treasures of fossil fuel, stored for his future use, were disclosed to man, and when the artificial sources of oil seemed about to fail, a substitute was discovered flowing in almost perennial fountains from the depths of these same carboniferous strata. A decline of the cod and whale fisheries is, nevertheless, to be regretted, as they have been from the earliest period of our history the nurseries of seamen and of our naval and commercial marine, and therefore contributing to the national defence, to foreign commerce, shipbuilding, agriculture, and other important interests.

Sanford's CHALLENGE HEATERS SET IN BRICK, PORTABLE OR AS FIRE PLACE HEATERS,



FOR WARMING BY ONE FIRE WITH PURE, SOFT AIR Dwellings, Churches, Hotels, Public Halls, Railroad Depots, Vessels, etc., WITH AND WITHOUT REGISTERS.

THE MOST POWERFUL HEATERS AND THE Greatest Fuel Savers in the World:

With an unparalleled mass of unimpeachable testimony of well-known Citizens, Ministers, Doctors, Lawyers, Merchants, Mechanics and others.

Send for pamphlet containing full description and testimonials.

SANFORD, TRUSLOW & CO.,
Nos. 239 and 241 Water st., N. Y.

Challenge Air-tight KITCHEN RANGES,

May be placed in a fire-place without masonry, and with or without water-back; or may be set out on feet, as an ordinary stove.

This range, already very popular, has the **LARGEST OVE[illegible]** of any in the market; BAKES PERFECTLY, never [illegible]ng to brown at the bottom; BOILS, ROASTS and and BROILS with unequalled facility and dispatch, and with extraordinary **ECONOMY OF FUEL,** which may be either coal or wood. Flues large and easily cleaned. A child can manage it, so simple is its construction. Castings extra heavy, and design plain and chaste.

Four sizes, adapted to families and hotels.

Beacon Light SUMMER AND WINTER PORTABLE RANGE,

Is a very popular range, having six boiler holes, one large oven that bakes perfectly, with an arrangement for roasting, or heating irons at the end. It is very economical of fuel. For a FEW DOLLARS a family may be supplied with a PERFECT COOKING APPARATUS, equal to the highest price stove in the market.

Three sizes, adapted to coal, or wood.

SANFORD, TRUSLOW & CO.,
239 and 241 Water st., N. Y.

SANFORD'S MAMMOTH OR GLOBE HEATERS.

The best stoves for RAILROAD DEPOTS and SHOPS, and all places where a great heat is required. They are very durable, and very economical of coal.

Beware of imitations that are inferior in strength and in other respects.

TESTIMONIALS.

HUDSON RIVER RAILROAD OFFICE, N. Y

This Company have now in use, over two hundred of Sanford's Mammoth Heaters, in Station Houses, Work Shops, and Engine Houses; we commenced using them in 1853, and some of the first stoves put up are still good and in use. We consider them the best Heaters now in use.

J. M. HEBARD, Supply Agent.

UNION FERRY COMPANY.

The Mammoth Heaters have been used by this Company in their waiting rooms at the several ferries and found to be very excellent stoves and more durable and valuable than any heretofore used. CYRUS P. SMITH, Managing Director.

MANUFACTURED AND SOLD BY
SANFORD, TRUSLOW & CO.,
Nos. 239 and 241 Water street, New York,

The COSMOPOLITE PARLOR RADIATOR, & GAS BURNER,

Introduced one year ago, already ranks as the **LEADING STOVE** for PARLORS, SITTING ROOMS, and all places where a soft, pleasant heat is desired.

Fire may be kept all winter with an astonishingly small supply of coal.

Send for description and testimonials.

SANFORD, TRUSLOW & CO.,
Nos. 239 and 241 Water st., N. Y.

Messrs. MUNN & CO.,

PROPRIETORS OF THE SCIENTIFIC AMERICAN continue to solicit patents in the United States and all foreign countries, on the most reasonable terms. They also attend to various other departments of business pertaining to patents, such as Extensions, Appeals to United States Courts, Interferences, Opinions relative to Infringements, etc. The long experience Messrs. MUNN & CO. have had in preparing specifications and drawings, extending over a period of sixteen years, has rendered them perfectly conversant with the mode of doing business at the United States Patent Office, and with the greater part of the inventions which have been patented. Information concerning the patentability of inventions is freely given, without charge, on sending a model or drawing and description to this office.

Consultations may be had with the firm between 9 and 4 o'clock, daily, at their principal office, No. 37 Park Row, New York. We have also a branch office in the city of Washington, on the corner of F and 7th sts., opposite the United States Patent Office. This office is under the general superintendence of one of the firm, and is in daily communication with the principal office in New York, and personal attention will be given at the Patent Office to all such cases as may require it. Inventors and others who may visit Washington, having business in the Patent Offices, are cordially invited to call at their office.

MUNN & CO., are very extensively engaged in the preparation and securing of Patents in the various European countries. For the transaction of this business they have offices at Nos. 66 Chancery Lane, London, 29 Boulevard St. Martin, Paris, and 26 Rue des Eperonniers, Brussels. Probably three-fourths of all the European Patents secured to American citizens are procured through this Agency.

A pamphlet of information concerning the proper course to be pursued in obtaining Patents, the requirements of the Patent Office, etc., may be had gratis upon application at the Principal Office, or either of the Branches. They also furnish a Circular of information about Foreign Patents.

During the last sixteen years the business of procuring Patents for new inventions in the United States, and all foreign countries has been conducted by Messrs. MUNN & CO., in connection with the publication of the SCIENTIFIC AMERICAN; and, as an evidence of the confidence reposed in them by the inventors throughout the country, we would state that we have acted as agents for more than FIFTEEN THOUSAND Inventors! In fact, they have become identified with the whole brotherhood of Inventors and Patentees, at home and abroad. We would state that we never had a more efficient corps of Draftsmen and Specification Writers than are employed at present in our extensive Offices, and we are prepared to attend to Patent business of all kinds, in the quickest time and on the most liberal terms.

Communications and remittances should be addressed to
MUNN & CO.,
Publishers, No. 37 Park Row, New York

OTTO AHLSTROM,

MANUFACTURER OF THE
LOUDON & AHLSTROM'S
PATENT EXPANSION SCREW FASTENINGS,

A QUICK and sure means of making preparatory Fastenings —The hole not requiring to be large at the bottom.

Also for ANCHORING LIGHT-HOUSES, BEACONS, BUOYS, BRIDGES, DAMS, FORTIFICATIONS, etc.

For NEWEL, GATE AND FENCE POSTS, and IRON RAILINGS in various ways.

Also, a CHEAP and ready means for fastening Iron or other ornaments (large or small) to stone or brick buildings.

For STAPLES, HINGES, AWNINGS, SIGNS, SHUTTER FASTENERS, LEADER HOOKS, etc.

For INSIDE WORK, such as for fastening articles to Hard Walls, Marble, etc., without hammering or using lead. For fastening Marble Tops to Furniture, etc. They are also so constructed as to be applied in Wood.

For LIFTING PURPOSES, such as Foundrymen's Tools for raising their patterns of wood or metal from the sand. They may be used in tapped or smooth holes.

Orders promptly executed by

OTTO AHLSTROM,
22nd St., 2nd Avenue, N. Y.

PROPOSALS

FOR $250,000 OF THE CROTON WATER STOCK OF THE CITY OF NEW YORK.

SEALED proposals will be received at the Comptroller's Office, until THURSDAY, September 25th, 1862, at two o'clock P. M., when the same will be publicly opened for the whole or any part of the sum of two hundred and fifty thousand dollars ($250,000) of the Croton water stock of the City of New York, authorized by Chapter 372 of the laws of 1860, and as amended by Chapter 181 of the laws of 1861, and by an ordinance of the Common Council, approved by the Mayor October 4, 1861, for increasing the supply of Croton water, etc.

The said stock will bear interest at the rate of six per cent. per annum, payable quarter-yearly, and the principal will be redeemed November 1, 1883.

The proposals will state the amount of stock desired, and the price per hundred dollars thereof, and the persons whose proposals are accepted will be required to deposit with the Chamberlain of the City, within ten days after the opening of the bids, the sum awarded to them respectively.

On presenting to the Comptroller the receipts of the Chamberlain for such deposits, the parties will be entitled to receive certificates for equal amounts of the par value of the stock, bearing interest from the date of payments.

Each proposition should be sealed and endorsed "Proposals for Croton Water Stock of the City of New York," and the same inclosed in a second envelope, addressed to the Comptroller.

The right is reserved to reject any or all of the bids, if considered necessary, to protect or promote the interests of the City.

ROBERT T. HAWS, Comptroller.

CITY OF NEW YORK, DEPARTMENT OF FINANCE, COMPTROLLER'S OFFICE, Aug. 26, 1862. 3t35

THE NEW YORK CENTRAL RAILROAD COMPANY, TREASURER'S OFFICE, ALBANY, July 19, 1862.

EIGHTEENTH SEMI-ANNUAL DIVIDEND.—The Directors of this Company have declared a Semi-annual Dividend of Three per cent. on the Capital Stock thereof,—free of the United States Income Tax, which will also be paid by the Company—payable on the 20th day of August next, upon stock registered at New York, Boston and Albany, and on the 20th day of September next upon stock registered at London.

Stockholders whose stock is registered at New York, will receive their Dividends at the office of DUNCAN, SHERMAN & CO.; those whose stock is registered at Boston, at the office of J. E. THAYER & BROTHER; those whose stock is registered at Albany, at the ALBANY CITY BANK; those whose stock is registered at London, at the UNION BANK OF LONDON, the latter at the rate of 4s. 1d. to the dollar.

The Transfer Books will be closed at the close of business on Thursday, the 31st day of July inst., and will be re-opened at New York, Albany and Boston on the morning of Saturday, the 23d day of August next.

8t30 JOHN V. L. PRUYN, Treasurer.

CUMBERLAND COAL.

THE BORDEN MINING COMPANY
ARE now prepared to fill orders and to make contracts for the season of 1862, for **CUMBERLAND COAL**, DELIVERABLE ON BOARD VESSEL AT **Baltimore, Md., Alexandria, Va.,** or **Georgetown, D. C.** Purchasers may rely upon the Coal proving equal in quality to that heretofore furnished.
The Company also have the pleasure of announcing that they have completed, after two years' labor, their shaft and machinery upon their new property in the VALLEY OF GEORGES CREEK, and are lifting from the very heart of the Coal Basin a superior and perfect article of **BITUMINOUS COAL,** remarkably free from impurities of every description, and possessing qualities peculiarly adapting it to Locomotive use, and to generating steam under all circumstances. This Coal will be known in market as **"BORDEN'S PIT COAL."**
Our Railroad friends, and others requiring a superior Coal, will find it to their interest to give this a trial before contracting elsewhere.
For prices and other information apply to

IMPORTANT
TO
RAILROAD COMPANIES,
THE ATTENTION OF
RAILROAD MANAGERS
Is called especially to the Machines manufactured especially for the use of Railroad Companies by the proprietors of the
ALBANY AGRICULTURAL WORKS,
CONSISTING OF
EMERY'S PATENT
Railway Horse Power,
Made changeable for both right and left hand work, also with changeable degrees of forces and motions of the driving Pullies without changing the Speed and Labor of the Horses, thereby adapting them to the different uses required, as Sawing Wood, Pumping Water, Driving Elevators and Machine Shops, Foundries, etc. The Power is also adjustable to any degree of wear or use, so as to always insure its working with its greatest efficiency. All the running chains in these Powers are made of the best MALLEABLE IRON which gives to them triple the strength and durability of Grey Iron which last is universally used by all other Railway Horse Power Manufacturers—thereby at the same time lessening the weight of these several hundred pounds, making them less cumbrous for handling and transportation.

WOOD SAWING MILLS.
These Sawing Mills are made upon the most approved and convenient plans in use. Having a heavy plate fly-wheel fixed to the Mandrill with a Ratchet or catch pulley for the driving band on the outside of the fly-wheel—the journal bearings are fitted with Babbet Metal—the wood carriage traverses on iron ways and gibbs—a 24 or 26 inch Saw is fitted, filed and set in working order and the plates warranted. When desired, a 14 inch saw is fitted, also a table for the purpose of slitting boards, etc., for fencing and carpenter work.
The whole together forming one of the most complete and desirable sets of machines for their purposes. They are already in very general use on nearly all the principal Railroads in this country.

PRICE,	ONE HORSE POWER	$90.00
"	TWO " "	120.00
"	SAW MILL, 24 in. Saw	37.00
	SETT BANDS and EXTRAS	5.00

PUMPING ENGINES
Of different kinds for Raising Water for Railroad tanks and other purposes, can be furnished on demand with Reciprocating or Rotary Pumps—fitted to be operated by these Horse Power and the best adapted for Railroad and Mining purposes. One of the SEVENTY-FIVE DOLLAR PUMPING ENGINES when driven by the TWO HORSE POWER has a capacity equal to any Four or Five Horse Power Steam Engine and Pumping Machine for the same purposes.

THRESHING MACHINES
Of the most approved kinds, for one and two horses and with simply Separators, or with Complete Cleaners which fit the grain for market in one and the same operations, and of the most approved construction.
They are very extensively introduced into all the grain-growing sections of this country and the world. They are especially adapted to the force of the above Horse Powers and can be driven by Steam or Water power with equal advantage. They will be furnished on the most liberal terms and warranty.
Liberal discounts made to RAILROAD COMPANIES from the above prices, and agents solicited for the sale of their manufactures.
For further particulars see the new Illustrated and Price Catalogue of the ALBANY AGRICULTURAL WORKS, furnished gratis on application to the proprietors.

THE GREAT FIRE IN TROY.

Unparalleled Triumph

OF

LILLIE'S SAFES!

The following certificates explain themselves:

TROY CITY BANK, May 21, 1862.

LEWIS LILLIE, Esq.—Dear Sir: I am sure it will give you as much pleasure to know as it does me to say, that in the recent fire of the 10th inst., which desolated our city and destroyed our Banking-house, the contents of our Bank vault, though the building itself was a heap of ruins, remained entirely unharmed. This result we attribute entirely to the fact that our old Wrought Iron Doors were, about two years since, exchanged for a set of your celebrated Chilled and Wrought Iron Doors and Frames. With the old doors, not a book or paper in the Vault could have been saved; as it is, nothing in it was even damaged, though exposed to the most intense heat.

Yours, respectfully, S. K. STOW, Cashier.

TROY, N. Y., May 14, 1862.

The undersigned, using **Lillie's Chilled and Wrought Iron Fire and Burglar Proof Safes,** at the time of the late disastrous fire in this city, would state that our safes were subjected to a severe test by fire, the heat varying in intensity, according to the locality and surroundings. The time they were exposed to the fiery ordeal, unprotected by water, varied from 24 to 72 hours. We would say that our money, papers, books, etc. were well preserved, and the Safes are suitable for further use. By comparison with Safes of other manufacture, equally exposed, we have no hesitancy in recommending Safes of Lillie's manufacture to the public on their demonstrated merit as entitled to unparalleled confidence as fire-proofs.

Jonathan Seaman.

Not dug out—nothing in them.

TROY, May 19, 1862.

The undersigned had one of **Lillie's Wrought and Chilled Iron Safes,** which went through the fire of the 10th of May. The Safe was exposed to a severe fire for over 24 hours. In falling it turned on its face, and when turned up to open the doors was red-hot. The back of the lower part of the Safe (behind the books) was filled with pennies, which, in falling over, pressed against the books, and brought them directly in contact with the doors. The wrappers on the pennies were mostly good. The books were unfit for further use, but the writing on them was partially legible and could be copied.

DUSENBURY & ANTHONY.

TROY, May 19, 1862.

This is to certify that we had in our store, in this city, when it burned, one of **Lillie's Small Safes,** which was in the fire, without water on the building or Safe. Most of the valuables were removed before the fire, and therefore we were not in haste to get the Safe out of the burning ruins. Some of the papers left in the Safe were legible when taken out, but most of them were charred.

I. M. SINGER & CO.,
Per G. W. BABCOCK, Agent.

This is to certify that the undersigned had one of LILLIE'S Patent Chilled Iron Safes in their store, which was burned during the late severe fire in this city, and we are happy to state, the Safe preserved all its contents in first-rate condition. All the papers were legible, and the books will do for further use, without even rebinding.

GRANT, NUTTING & CO.

The foregoing comprises all the Safes of my manufacture that were in the fire, and below will be found certificates from all the owners of Safes manufactured several years since, by World's Safe Company, who used my Patent Chilled Iron Shell, but not my Fire-Proof Cement.

WORLD'S SAFE COMPANY'S SAFES.

TROY, May 19, 1862.

The undersigned, having Safes manufactured by the late World's Safe Company, and which were subjected to the great fire of the 10th inst., in this city, would state that our Safes were exposed to a severe heat, being confined in the burning ruins, unprotected by water, from one to three days. On opening the Safes the contents were mostly legible, and to a far greater extent than could be reasonably expected of any Safe. We concur in the opinion that the Safes manufactured by LEWIS LILLIE, which were subjected to the fire for a longer time and preserved their contents, are superior and powerful protectors against fire, and by this test we are prepared to recommend them as such to public patronage.

Lyman Bennett,
Flood & Dunham,
John Hutchinson,
Sillman, Matthews & Co.,
E. L. Mallory,
E. H. Virgil,
Sup't National Express Co.

The undersigned, having Safes manufactured by the late World's Safe Company, and which were subjected to the great fire in this city, would state, that on opening our Safes the contents were mostly legible. We concur in the opinion that the Safes manufactured by LEWIS LILLIE, which were subjected to the fire for a longer time and preserved their contents, are superior and powerful protectives against fire, and we are happy to recommend them to public patronage.

W. & L. E. GURLEY,
R. L. & G. DRAKE,
LEONARD SMITH,
H. E. & W. ALENDORPH, Absent.

TROY, May 19, 1862.

To whom it may concern: We would certify that when the recent fire broke out in this city, we took out from our Safe (which was made by World's Safe Company) all our books, papers, etc., and then left it to the flames without shutting the door, and the Safe will do for further use by being repaired, although the book case was destroyed by the door being left open through the fire.

ACKLEY & CO.

TROY, May 19, 1862.

The undersigned, using Safes manufactured by the World's Safe Company, at the time of the late disastrous fire on the 10th instant, in this city, would state that our Safes were filled with fire-brick for the fire-proof, and while several of this class preserved their contents, ours were considerably charred, and only ½ part legible. In justice to Mr. LEWIS LILLIE, we are pleased to state that Safes of his manufacture proved to be powerful protectors against fire, and have preserved their contents, after having been exposed to the fiery ordeal, unprotected by water, from one to three days.

Stephen Holton,
Bennett, Strickland & Fellows,
Corless & House,
Luther Greenman,
E. W. Johnson,
J. H. Goodsell.

TROY, N. Y., May 17, 1862.

LEWIS LILLIE—Dear Sir: We were using at the time of the late severe fire of 10th inst., a Safe purchased in 1852 of the late World's Safe Company. The contents were considerably charred, but our Ledger is mostly legible, and we are able to copy it.

The Safe was subjected to a severe heat for over eighteen hours, and we are satisfied that if water had been thrown on the ruins, as is ordinarily the case, the contents would have come out uninjured. You will please repair our Safe, placing in it the improvements embraced in Safes of your manufacture, and oblige

SHELDON & GREENE.

N.B.—The above Safe is believed to have damaged the contents more than any of those named in this circular.

There were only seven Sheet Iron Safes, made by Herring and others, outside of the railroad depot, that were exposed to the fire, four of which were entirely burnt out; the fifth was saved by being early cooled off by water; the remaining two were not severely tested.

LEWIS LILLIE.

Grand Trunk Railway.

Mr. Watkin, who had been deputed by the London Directors to proceed to Canada, conduct negotiations with the Provincial Government and reform the management of the Grand Trunk Railway, has recently made a report of that concern to the Board. After some congratulations that the floating debt has been got rid of and a more equitable mode of settling the postal payments has been adopted, he alludes to the business of the road. For the year ending June 30, 1862, there is shown an increase of 60 per cent. in the net receipts; while the working expenses for the half-year ending Dec. 31, show a reduction from 84½ to 77 per cent., as compared with the corresponding time in 1860. Attention is then directed to the Arrangements Act passed at the last session of the Legislature, enabling the company to clear away its floating debt; to have its management transferred to England; to re-organize the concern on a more thorough commercial foundation; to devote the military and postal receipts to the extinction of the simple contract debt by the issue of bonds which shall represent that revenue. Though these benefits, says Mr. W., are not all that the company had a right to expect, they will nevertheless be found of considerable value. The postal arbitration is still proceeding, Chief Justice Draper having been selected as the third umpire; the lessors of the Detroit and Port Huron Railway have agreed to accept £22,500 instead of £36,000 per annum as rental; there is a fair prospect that the Atlantic and St. Lawrence Company will accept a similar compromise, making thus a saving of £24,000 a year on leases. Mr. Brydges, now exclusively engaged by this company, has reduced office expenses, and with reductions to be made in the locomotive and car departments it is expected that additional savings can be made to the amount of £39,246 per annum. Though the act authorizes the creation of an equipment mortgage for £500,000, Mr. Watkins does not favor its issue at present, believing that the present stock of engines and cars can be made to answer every purpose. With the civil war raging in this country, he questions the propriety of remitting money to the Provinces. He recommends the encouragement of shippers to find their own cars; a reduction in the number of trains run and the high rates of speed adopted, cutting off the system of free passes to influential personages, the abandonment of profitless stations and a reduction in part of the salaries paid. He thinks there is a reasonable probability of the extension of the line from Riviere du Loup to Halifax out of the moneys raised by the Province, under the guaranty of their bonds by the Home Government.

This report was issued just before the meeting of share and bondholders in the road, held at the London Tavern, on the 8th ultimo. The object was to accept or reject the provisions made by the last legislature, for which purpose a majority of three-fourths in value of both interests was made necessary. Sir Thomas Baring, M. P., presided on the occasion. The proceedings as we find them reported in the Toronto *Globe*, were quite animated. On the motion to accept the bill, a Mr. Conybeare, representing a large portion of the bondholders who were not present, and it is asserted had not been duly notified, offered an amendment for adjourning till the 25th, in order to let the bondholders act on the question separately. A Mr. Chapman accused the chairman of swindling the company, by the purchase of lands which, when found worthless, were transferred to the road, adding that if all parties got justice that officer would be sent to pick oakum with Sir John Dean Paul. Mr. Chapman's remarks were evidently dictated by strong personal resentments.

Mr. Watkin replied to Messrs. Conybeare and Chapman, and contended that much of the opposition made was incited by a disposition to break up the company altogether, instead of assisting it in the effort to recover its credit. He then reviewed the improved condition of affairs since his visit to Canada. When he arrived there the Company was deeply in debt to its employees, and no person would trust it; shippers were even afraid to let their property go into its cars lest these might be seized by parties who had obtained judgments. At present, credit was in a great measure restored; articles needed were purchased with ready money and at the lowest prices. The company's servants were working for its interests with commendable zeal. To accomplish this Mr. W. had to pledge his individual credit for large amounts. If railways in Canada were as yet unproductive, it was because they had been built in excess of the public wants. That province had 75 miles to every 100,000 inhabitants, while in England there were only 36 miles to the same number. After touching upon the reduction of expenses, Mr. Watkin referred to the postal service rendered and the compensation received. "We send daily, twice each way, the whole length of our railway, a traveling post office car, fitted up with the means of sorting letters and carrying on the postal service, *en route*. We run special trains to Quebec in summer and to Portland in winter, in connection with the Canadian Mail Steamers. We carry large numbers of persons free." For this the company had been offered as compensation barely enough to pay the fares of the post office officials. He then administered a severe rebuke to the Canadian Legislature for its ingratitude to those who had sunk twelve or fourteen millions in the province and made it in fact a country, not a dependency. He gave a sketch of events in the appointment of Messrs. Moffat, Brooks and Draper as arbitrators, and expressed a hope that justice would still be done by the present government, although its course hitherto had been unfair. The importance of the Grand Trunk road had been seen last winter, while the Trent affair was pending. The company had been seriously considering the propriety of abandoning it altogether; but at the urgent request of the Canadian authorities they continued it, enabling

troops to be thrown with despatch into all parts of the province. The speaker concluded by defending the Chairman's purchase of the Sarnia lands, as being strictly honorable.

The amendment was therefore withdrawn. On a division, the number of persons in favor of the original motion was 1,311 against 19, the stock and bonds represented being respectively £3,788,601 and £48,485. It was further resolved not to issue the £500,000 bonds without authority to that effect obtained from a special meeting of shareholders.

Mr. Brydges has just sent a circular to shippers of freight by the Grand Trunk, calling attention to the company's rolling stock which, though more than sufficient for all purposes in summer, cannot accommodate the freight thrown upon the road during the winter months. This crowding has interfered with the local business which ought to have been better attended to. He says:

It is proposed, in order to remedy these difficulties, to change the policy of the company in future—to make the local traffic along the line of the Grand Trunk Railway the first consideration—to give every possible attention to that traffic—and to take every step to encourage its development.

To accomplish these objects, traffic from the Western States to points off the Grand Trunk line itself will not be encouraged, until the company finds that it has sufficient rolling stock to carry such traffic after fully supplying the wants of the local trade of the line. Traffic from the Western States to London, Toronto, Ottawa, Quebec, Bangor and Portland will, of course, be treated as local traffic, and every attention paid to it as such.

The Provision Trade and other Produce from the West seeking shipment for European Markets at Montreal and Portland, will have especial attention; and such arrangements have been completed with the Montreal Ocean Steamship Company, as well as other lines of steam and sailing vessels, as will ensure ample shipping capacity for this trade. Every measure will be taken to ensure prompt despatch to this freight between Detroit and Montreal or Portland.

To accommodate this business, elevators are in course of erection—one at Sarnia, another at Toronto, and a third at Portland; each of these having a capacity of 150,000 bushels. It is intended to have one at Montreal of twice this capacity, so that grain can be stored there during the whole winter and shipped to Europe in spring Negotiations are on foot to build one at Kingston. Some changes in the tariff of rates are also to be made which will prove beneficial to shippers as a class. He concludes by stating that if they will hereafter provide their own cars, as is largely done in England, the company will be prepared to do the haulage at quite moderate rates.

New York Canals.

The quantity of flour, wheat, corn and barley left at tide-water, from the commencement of navigation to the 31st of August, inclusive, during the years 1861 and 1862, was as follows:

	Flour, bbls.	Wheat, bush.	Corn, bush.	Barley, bush.
1861	624,459	12,995,462	10,581,545	198,459
1862	837,334	15,131,984	10,813,738	373,091
Incr.	212,875	2,136,722	32,199	174,632

By reducing the wheat to flour, the quantity of the latter left at tide-water this year, compared with the corresponding period last year, shows an increase of 636,179 bbls. flour.

The following comparative table shows the quantity of some of the principal articles of produce left at tide-water from the commencement of navigation to and including the 31st of August in the years indicated:

	1860.	1861.	1862.
Canal opened.	Apr. 25.	May 1.	May 1.
Flour, bbls	406,215	624,459	837,334
Wheat, bush	5,148,658	12,995,462	15,131,984
Corn, bush	9,677,651	10,581,545	10,813,738
Barley, bush	80,806	198,459	373,091
Oats, bush	3,710,046	2,995,885	2,275,852

Wool, lb	1,682,215	869,749	1,291,123

Union Pacific Railroad Convention.

The Commissioners of the Union Pacific Railroad met at Chicago on Wednesday the 2d inst., General Curtis was chosen temporary Chairman, and Messrs. Robert Turney, of Pennsylvania, and John E. Robinson, of California, temporary Secretories. On the roll being called 76 members answered to their names.

At the afternoon session a permanent organization was effected by the choice of Wm. B. Ogden, of Illinois, as President, H. V. Poor, of New York as Secretary, and T. W. Alcott, of New York, as Treasurer.

On Wednesday, a joint resolution of the Legislature of Colorado on the subject of the railroad, was read and laid on the table for consideration. A committee of thirteen reported a preamble and set of resolutions, setting forth the great importance of the work for national and other purposes, also recommending that books for subscriptions should be opened at one of the principal cities in each of the Northern States. The report was accepted and the committee continued. Addresses were delivered by Gov. Evans and others, after which the Board adjourned for the day.

Housatonic Railroad.

The receipts of this road for the years ending December 31, 1860 and 1861, have been as follows:

	1860.	1861.
From freight	$196,306 86	$125,285 84
" passengers	101,417 74	79,851 23
" mail, express, etc.	21,382 08	20,154 93
	$319,106 68	$225,292 00

The expenses of 1861 were:

Repairs of road	$40,375 47	
" engines	7,205 87	
" cars	5,371 29	
" buildings, etc.	4,479 19	
Fuel	16,973 20	
Oil and waste	2,323 03	
Freight expenses	22,198 33	
Passenger "	14,282 72	
General "	7,138 01	
Miscellaneous	3,986 57	
		124,333 68
Balance		$100,958 32

Disbursed as follows:

State, town and city taxes	$1,048 80	
Rent of Stockbridge and Pittsfield R. R.	31,409 00	
Rent of Berkshire R. R.	42,000 00	
Rent of West Stockbridge Railroad	835 47	
Interest on old bonds, loans, exchange, etc.	9,961 10	
Coupons	7,000 00	
Sundry items charged profit and loss	748 66	
		93,003 03
Surplus		$7,955 29

Compared with the previous year, the gross earnings of the past show a decrease of $93,814 68, with a reduction in expenses of $42,301 64—making the decrease in net earnings $51,513 04. The report says:

It will be evident, from the above statement, that the war has operated with peculiar severity on the manufacturing interests of your road, reducing your receipts to the unprecedentedly low figure of $225,292 00, a reduction of 29.40 per cent. from those of 1860.

But the excellent condition to which the large expenditures of previous years have brought your roadway and equipment, have enabled us to curtail our expenses for the past year, in nearly an equal ratio, without in any respect, suffering your property to become depreciated.

On the first of January, 1858, the company's first mortgage bonds, to the amount of $300,000, became due. It was deemed expedient by your directors, at that time, to anticipate tho maturity of these bonds by issuing others, to the amount of $250,000, bearing seven per cent. interest, and $50,000 of which became due on the first of January of each succeeding year, up to and including January 1st, 1863.

In the midst of the financial crisis of 1857-58 these bonds, were negotiated, at an average of ninety-seven per cent. And, it was confidently expected that the earnings of the company would enable them to take up these bonds as fast as they became due.

The directors assumed that the receipts of the road in those five years, would at least, equal those of 1857; and, if this had been the case, their expectations in regard to the payment of these bonds, would have been more than realized.

But, during that interval, our manufacturing interests have been prostrated to a greater extent than could have been foreseen or reasonably anticipated by any one, and other means, must in consequence be resorted to, to take up the bonds.

In these circumstances, we have decided to issue bonds, to the amount of $200,000, bearing interest at seven per cent., and maturing January 1st, 1877; a sinking fund, to be invested in the bonds themselves whenever they can be obtained at par or less, being provided for their redemption when due. Up to the present time, the disposition to take these bonds at par, in exchange for outstanding and payment of past due bonds, has been pretty general. The whole amount will be negotiated at par. When this shall have been effected, an annual business of $300,000 can be done with such a moderate increase of expenses as will enable the payment of regular six per cent. dividends. We believe the present revulsion in our receipts to be merely temporary, and that the restoration of peaceful relations with our Southern States, will in connection with the higher tariff, which will probably be imposed upon foreign goods, again set our mills and furnaces in active operation, and restore onr business to its highest, previous standard. Our trains have been run during the past year with entire regularity and freedom from accident. The number of miles run by engines has been 189,358.

It is scarcely possible but that our receipts for 1862 should considerably exceed those of 1861; but the present unsettled condition of our National affairs does not allow us to make a reliable estimate. Unless, however, they are increased, by at least $50,000, you need not expect any material increase in the expenses.

The equipment of the road consists of 6 passenger and 5 freight locomotives; 10 eight-wheel

and 2 four-wheel passenger cars; 6 baggage, 217 freight and 30 gravel cars.

The Eighth Census.

The following is a continuation of the preliminary chapters of the Census Report of 1860, now in course of preparation at Washington, under the direction of Jos. C. G. KENNEDY, Esq.:

IMPLEMENTS OF WARFARE.

Having partially reviewed the progressive industry of our country during the last decade, and seen the advancement in all that relates to the peaceful arts, the numerous improvements made in the implements and enginery of warfare, which are patent and undeniable, deserve consideration. Our improved firearms, especially rifles and pistols, have obtained a reputation not alone in Europe, but in Africa, Asia, and the islands of the sea, the traveller finds that his revolvers of American invention and manufacture exert a salutary influence on the Bedouin and the robber.

THE ARMSTRONG GUN INVENTED IN AMERICA.

The machinery for making the various parts of rifles and other firearms, which in its automic exercise, seems almost endowed with reasoning faculties, owes its origin to the inventive genius of New England. The Enfield rifle was transplanted to England by a son of Vermont, under whose superintendence the arms were made. And even the Armstrong gun, which obtained for its reputed inventor the honor of knighthood, was invented in this country, for a model was submitted and the principle demonstrated to scientific gentlemen at Harvard college anterior to its appearance in Great Britain.

FIRST RIFLES MADE BY MACHINERY.

The first rifles made by machinery to use the Minie ball or its equivalent, were made at Hartford, Connecticut, and Windsor, Vermont, for the English government. The machinery and tools for the armory at Enfield, England, were made at Windsor, Vermont, Hartford, Connecticut, and Chicopee, Massachusetts. Robbins & Lawrence did most of the work on such machinery and tools, and James T. Ames, agent of the Chicopee Works, got out the stocking machinery and some other parts.

In the year preceding June 1, 1860, a year devoted to peaceful pursuits, the manufacture of firearms was limited, and yet two establishments in a single city of Connecticut produced to the value of over one million of dollars. Had the national inventory been taken two years later, the magnitude of this and kindred branches of manufacture, stimulated by the necessities of the country, would have excited astonishment.

Without any special stimulus to growth—depressed, indeed, during the years 1857 and 1858, in common with other public interests, by the general financial embarrassments of those years—and with a powerful competition in the amazing growth of manufactures in Great Britain and nearly every other nation of Europe, the manufactories of the United States had nevertheless been augmented, diversified and perfected in nearly every branch, and almost uniformly throughout the Union. Domestic materials, whether animal, vegetable or mineral, found ready sales at remunerative prices, and were invigorated by the distribution of both raw and manufactured products. Invention was stimulated and rewarded. Labor and capital found ample and profitable employment, and new and unexpected fields were opened for each. Agriculture furnished food and materials at moderate cost, and the skill of our artisans cheapened and multiplied all artificial instruments of comfort and happiness for the people. Even the more purely agricultural States of the South were rapidly creating manufactories for the improvement of their great staples and abundant natural resources. The nation seemed speedily approaching a period of complete independence in respect to the products of skilled labor, and national security and happiness seemed about to be insured by the harmonious development of all the great interest of the people. Peace reigned within our borders and waited upon our name abroad. But in an evil hour the tide of prosperity has been stayed, whether to be rolled back or not the ninth census will reveal.

The General Railroad Law of Michigan.

ORGANISATION OF COMPANIES. POWERS OF COMMISSIONERS. WHEN A SUBSCRIPTION IS BINDING. WHEN ASSESSMENTS MAY BE MADE.

The Schoolcraft and Three Rivers Railroad Company was plaintiff, and sued one Daniel Shurtz in a Circuit Court of Michigan, upon a subscription to their stock made December 18, 1855.

It appears that the company had been previously organized, by an original subscription and filing of articles under the General Railroad Law, and that five commissioners were named in the articles to open books for further subscriptions under the statute. The amount of capital stock fixed by the articles of agreement, was $130,000, divided into 5,200 shares of $25 each. The directors, by vote June 14, 1855 (which was during the same month when the organization took place), passed a resolution instructing the commissioners to require payment of five per cent. upon all subscriptions when made. The subscription was made upon a subscription paper, circulated by an agent appointed by the board of directors, and no books of subscription were opened. It did not appear at the trial that the commissioners or any of them acted in the matter. The whole amount of stock was never subscribed. The directors called assessments from time to time, up to the full amount of each share subscribed. The defendant never paid any portion of his subscription, but on different occasions he promised to do so; and he also voted at a stockholders' meeting after having so subscribed. The subscription was in the following terms:

Dec. 18th, 1855. Schoolcraft and Three Rivers Railroad Company Stock Subscription.—We, the undersigned, agree to take the number of shares of stock in the Schoolcraft & Three Rivers Railroad Company, which is set opposite our names respectively, and bind ourselves, our heirs and executors, to pay for the same in monthly instalments, to the order of the president and directors of said Railroad Company, or their agent or attorney, for the purpose of constructing or building said road, whenever called upon so to do; which instalments shall not exceed twenty per cent. at any one time.

NAMES.	SHARES.	AMOUNTS
Daniel Shurtz	10	$250 00
Daniel Shurtz	10	$250 00

To be paid in one year.

The Circuit Court gave judgment to the plaintiff for the full amount claimed: and the case was then taken on appeal to a full bench of the Supreme Court of the State, which reversed the judgment of the Circuit Court, and held that the subscription thus made was not binding; that under the General Railroad Law passed by the Legislature of the State in 1855, the commissioners act as a statutory board, and derive their power from the law and not from the corporation. No one else is authorized to receive subscriptions, and the commissioners are not required to recognize or protect any stock not subscribed for on their own list. In this case the subscription not being under their auspices was not binding on them, and could not prevent other parties from taking the entire amount not subscribed by the original articles, whenever the commissioners should see fit to proceed and perform their duty; there was therefore no consideration for the promise of the subscriber, and the subscription was void. The court also held that no levy of assessments could be made until the whole amount of capital stock specified in the articles was subscribed.

The following opinion was rendered at the decision of the case.

CAMPBELL, J.—The principal legal questions arising on this finding, relate to the validity of the subscription, and the right to levy assessments upon it, if valid, before all the stock was subscribed.

The General Railroad Law contemplates that, after the organization is made legal, by filing articles in proper form after payment of five per cent. upon the preliminary subscription of $1,000 per mile, the commissioners named in the articles shall open books of subscription to the capital stock from time to time, at such places and on such notice as a majority of them shall direct; and shall keep open the books until all the capital stock shall be subscribed. Provision is made for an equal distribution in case the subscriptions exceed the sum fixed. After the whole sum is subscribed and distributed, they are to call a stockholders' meeting to choose directors. L. 1855. These commissioners act as a statutory board, and derive their powers from the law and not from the corporation. They are expressly required to give notice of the times and places fixed by them for receiving subscriptions, and to keep their subscription books open. The design of the law was to enable all persons to subscribe upon equal terms. No one else was authorized to receive subscriptions, and they were not required to recognize or protect in their distributions any stock not subscribed for on their own lists. It follows of necessity, that no person could by any other means obtain any assurance that he would be entitled to any share in the concern, and any subscription made without such assurance would be void for want of mutuality.

It is unnecessary to decide whether the subscriptions must be made literally in books, although such a course would be certainly much safer and less liable to mistake and abuse. Nor is the question whether, after the books are legally opened for subscription, any portion of the work may not be done by single commissioners, or by

clerks or other agents under the immediate inspection of the commissioners or some of them. The case does not find that the commissioners ever opened subscription lists, or did any other act required by law. If we were at liberty to look outside of the finding into the evidence, there is nothing to show any agency of the board whatever, and no proof that more than one of their number authorized any subscription. But the finding is entirely silent upon this. The statute requires a majority of the commissioners to determine when and where subscriptions are to be taken, and their duty continues until the whole amount of stock is subscribed and distributed. The subscription in question, not being made under their auspices, is not binding on them, and could not prevent other parties from taking the entire amount not subscribed by the original articles, whenever the commissioners should see fit to proceed and perform their duty. There was no consideration, therefore, on which to base Shurtz's promise.

We are also of opinion that, had the case found a legal subscription, any levy of assessments was premature. The case finds, expressly, that all of the stock was not subscribed. How far the act of 1857 modifies the power to call in subscriptions till this is done, is immaterial in this case, as all that was done here preceded the passage of that act. It is quite common in our special charters, and in some of our general laws, to permit corporations to proceed in the exercise of all their powers before their stock is all taken. When this is allowed, there is usually an express limitation, unless it is fairly to be deduced from other plain provisions. But the General Railroad Law (at least as it existed before the amendments referred to) contains no provision from which such an intent can be deduced. It allows each company to fix its own stock, but it must not fall short of $4,000 per mile for flat rail, or $8,000 per mile for heavy rail (see section 1,). When we compare this provision with the requirement that the commissioners shall keep their books open until all the subscriptions are full, and then call a meeting to elect directors at which they are to act as inspectors, we cannot resist the inference that the act was designed to prevent any company from proceeding without an assurance of genuine capital adequate to insure the building of the road entirely, or far enough to make it a safe security for loans to finish it. Persons subscribing have a right to rely on the completion of the stock subscriptions, as some assurance that their means will not be absolutely thrown away. And it is fairly presumable that broad grounds of public policy, to prevent gambling in inflated securities, and obtaining money under false appearances, were not left out of sight by the Legislature. Several cases were cited on the hearing which held that the subscribers could not lawfully be called on to pay any assessments until either the whole stock, or such minimum as the corporate law prescribed, should be taken. The reasons given for this ruling are convincing and ought to prevail.

Upon the finding of facts, we think the defendant below was entitled to judgment in his favor The judgment below must be reversed with costs, and a judgment must be entered in his favor in this court. As the errors upon which we decide the cause arise upon the record, and do not impeach the finding, it is not a case for a new trial The other Justices concurred.

Railroad Earnings--Monthly.

The following statement shows the business of the Philadelphia and Reading Railroad Company for July, 1862, compared with that of 1861:

	1862.	1861.
Rec'd from coal	$306,900 62	$213,381 11
" " merch'dise	39,675 11	26,630 59
" " travel, etc.	42,148 96	49,975 11
Total	$388,724 69	$289,986 81
Expenses	176,732 65	137,606 78
Net profit for the m'th,	$211,992 04	$152,380 03
Profit for the previous 7 months	826,572 14	740,281 08
Tot. net profit 8 mos.	$1,038,564 18	$892,661 11

The receipts of the Housatonic Railway Company for July, 1862, are $24,978 26
Do., 1861 ..... 18,956 82

Increase $6,021 44

Railroad Earnings--Weekly.

The traffic of the Great Western Railway of Canada for the week ending August 22, 1862, was as follows:

Passengers	$19,093 04
Freight and live stock	17,736 06
Mails and sundries	1,308 76
	$38,137 86
Corresponding week of last year	32,041 59
Increase	$6,096 27

The receipts of the Grand Trunk Railway of Canada for the week ending August 23, 1862, were:

18,424 passengers	$25,788 65
Mails and sundries	2,933 65
Freight and live stock, 8,449 tons	31,285 37
Total	$60,007 70
Corresponding week of last year	51,625 54
Increase	$8,382 16

The earnings of the St. Louis, Alton and Chicago Railroad for the 2d week in August, 1862, were $28,023 94
Do., 1861 ..... 25,569 50

Decrease $2,454 89

The earnings of the St. Louis, Alton and Chicago Railroad for the 3d week of August 1862, were $28,857 58
Do., 1861 ..... 29,789 97

Decrease $1,432 44

The earnings of the Milwaukee and Prairie du Chien Railroad, for the 2d week of August, 1862, were $12,750 51
Do., 1861 ..... 16,561 53

Increase $3,811 02

The earnings of the Milwaukee and Prairie du Chien Railroad for the 3d week in August, 1862, were $16,977 20
Do., 1861 ..... 20,388 73

Decrease $3,391 53

The Michigan Southern Railroad earned for the first half of August, 1862. ..... $53,627 00
Do., 1861 ..... 89,954 00

Increase $36,327 00
—equal to 67 per cent.

The Chicago and Northwestern Railroad earned in the 3d week of August, 1862 ..... $14,668 61
Do., 1861 ..... 13,373 07

Increase $1,295 54

Commercial Position of the Country.

The state of the commercial relations of the United States with other countries is naturally a subject second in interest both at home and abroad, only to that of the war. For the very year of its outbreak, the gross amount of this trade was nearly $800,000,000, almost equally divided between imports and exports. There was no civilized country but had a large stake in this vast commerce, while the internal trade of our own was largely dependent upon it, interwoven as was the former with every interest in the land.

More than one-half, in value, of our exports had been made up of staples furnished by the South. These were instantly cut-off, reducing the amount of our exports in an equal degree. The North instantly lost a trade of corresponding value. It would naturally be supposed, under such circumstances, that the commercial position of the Northern States through which the foreign relations of the South had been conducted, would undergo a shock, which could have no other end than national bankruptcy. Such was a foregone conclusion of foreigners themselves. But remarkable as the event was, the fact was exactly the reverse. So suddenly did our people adapt themselves to the altered condition of affairs that they reduced their imports far below the scale of their exports, so as to bring foreigners so largely in their debt that the balance called for the importation of more than $50,000,000 in specie the past year. The nation went through the year and the crisis most triumphantly, displaying a degree of financial strength quite as astonishing to themselves as to others. The alarm caused by the rebellion was of course excessive. The market value of securities fell off enormously, and no small amount of individual loss and suffering was created. But in the aggregate there has hardly been a year in the history of our people in which they were more favored in all their interests, than in 1861.

We are now far advanced in the second year of the rebellion, and can see and judge more accurately of the commercial position and material prosperity of our people. It repeats in its general results the first, and would undoubtedly be still more in our favor, but for the enormous exports of gold in payment of securities held abroad, and sent home for sale. For 1861, up to the end of the second week in August, we imported through the port of New York, $33,000,000 in specie, over our exports. For a similar period of 1862 we exported, over imports, almost exactly the amount we imported the year previous. The flow was completely reversed. The exports from this port for the periods named for the years 1861 and 1862 were, exclusive of specie, $81,716,273 for the former, and $86,382,735 for the latter; showing an increase of $4,666,462. The imports, exclusive of specie, for the same time in 1861 were $81,446,435, and $106,641,234 for 1862, showing an increase for the past year of $25,194,799. But it must be borne in mind that the purchases of munitions of war which are all entered at the Custom House, and which have been enormous in amount, appear in the returns for the past year. These are extraordinary, and will not continue, but they undoubtedly very nearly equalled the excess of importations for the year, so that the volume of our exports and imports, exclusive of specie, were unquestionably very nearly equal,

MOVEMENT OF BREADSTUFF.

The following is a statement of the exports of Broadstuffs from the United States to Great Britain and Ireland since September 1, 1861.

	Flour, bbls.	Meal, bbls.	Wheat, bush.	Corn, bush.
New York	1,544,720	824	26,642,308	12,270,644

Total, 1858-59	102,032	23	468,788	320,691

TO THE CONTINENT.

	Flour bbls.	Wheat, bush.	Corn, bush.	Rye, bush.
New York	594,467	7,459,940	302,591	1,540,210
Other ports	27,122	107,910	19,463	44,291
Total, 1861-62	618,609	7,567,850	322,074	1,584,501
Total, 1860-61	124,817	3,012,267	63,737	343,242

FOREIGN DRY GOODS TRADE.

The value of dry goods imported at New York, in August, for six years, has been as follows:

1857	$10,949,700	1860	$12,361,500
1858	11,555,700	1861	2,704,000
1859	15,146,900	1862	6,566,100

The following is a comparative summary of the importations of dry goods at this port for August, 1860, '61, & '62:

ENTERED FOR CONSUMPTION.

	1860.	1861.	1862.
Manufacture of wool	$4,289,201	$558,465	$2,819,345
" cotton	1,292,409	90,603	610,513

Total	$78,352,000	$34,219,000	$36,747,400

The movements in dry goods for August, for six years, have been as follows:

Years.	Entered for consumption.	Withd'n from warehouse.	Entered for warehous'g.
1857	$89,280,300	$2,146,600	$1,128,900
1858	11,063,200	1,619,100	492,400
1859	14,230,400	1,476,500	946,500
1860	11,548,000	1,062,500	813,500
1861	1,272,000	1,284,500	1,432,000
1862	5,642,900	759,000	919,200

COMMERCE OF PHILADELPHIA.

We give below a statement of the business of the Philadelphia Custom House for the month of August, 1862, as compared with the two previous years:

	1860.	1861.	1862.
In Warehouse Aug. 1st	$967,244	1,232,900	77,546
Warehoused from foreign ports	122,979	10,649	70,823
" other districts	16,761	8,460	3,059
Withdrawn for consumption	164,465	117,573	39,397
" transportation	4,208	6,751	4,143
" exportation	6,195	15	....
In Warehouse Aug. 31	902,126	1,126,679	107,282
Entered for consumption	1,591,170	120,628	426,603
Free mdse. entered	303,646	242,008	16,416
Domestic produce exported	463,626	553,640	1,049,484

	DUTIES RECEIVED. 1860.	1861.	1862.
August	$168,614	$370,419	$240,778
Previous 7 months	1,575,112	1,644,463	2,599,963
	$1,743,726	$2,014,882	$2,840,731
		$1,068,553	

The total value of exports from the port for the period named for 1862 were $113,535,178; of imports $107,372,790, showing an excess of exports at this port equal to $6,162,388, of which specie made up $36,043,688. We have just about exported the regular product of our mines, leaving still within the country the importations of 1861. But we have shown that extraordinary causes swelled the imports 1862, which will not occur again. For the commercial wants of the country it is not probable that the imports were much greater for the past than the year previous, while the exports have considerably increased, with every prospect of a still larger increase for the year to come.

Were we not a gold producing country we could not be placed in a stronger position in reference to our foreign trade. In the time of our greatest need and greatest want of preparation, we have kept the balance arising out of commercial interchanges, largely in our favor. But every day strengthens this position. We have commenced the manufacture of a large proportion (in value) of the articles we have been accustomed to import. We have all the conditions for their manufacture, with abundant capital, and can soon produce them at rates far below what they can be imported for under the present high rates of duties. Our importations will soon be made up of articles which cannot be produced with our climate and soil, and which have not equalled, in value, one-third of the ordinary line of our imports. On the other hand our exports consist almost exclusively of *raw* materials which form the basis of support for the populations, and manufacturing establishments of the Old World. Every nation can get along without importing the fabrics of another, but cannot without its agricultural products (except in those in which it is self-supporting). We do not propose to discontinue the use of the Tea of China, or the Sugar of the West Indies; but we do expect to fabricate, for the future, our cotton and woolen goods, and all kinds of iron that we have been accustomed to import. That we have not done so before has been because we couldnot do everything at once. England cannot do without breadstuffs. She will, as she has done, buy in the best market. The people of this country are rapidly getting into a position in which they can undersell all others. Each year improves the system of culture, and cheapens the cost of transportation. Every year certainly must swell the volume of our exports and diminish, relatively, that of our imports. Such results are inevitable, flowing from causes that cannot be subverted or overridden. When we add the fact that we are a great gold producing people, and that we have already accumulated vast reserves of the precious metals to meet every contingency, and can count upon a yearly surplus of production of some $30,000,000 or $40,000,000 above the wants of our people, certainly no further element is wanting to establish our complete commercial independence of the world, even in the period of our greatest weakness.

The element creating a temporary disturbance, is the large amount remitted in payment of sales of securities on foreign account. With the rise in their market value the homeward flow may continue. This is not to be regretted, the greater the amount of securities held by our people the better. The present inconvenience will inure to our advantage, and will prove a substantial benefit, as it is a step further in releasing us from debts, the payment of the interest on which, makes no inconsiderable item in our exports of the precious metals. —*Hallett's Financial Circular.*

American Railroad Journal.

Saturday, September 6, 1862.

Stock and Money Market.

The exciting news received from the seat of war has had a depressing effect upon the stock market the present week. This downward movement began on Saturday and has since steadily continued. As we write (Wednesday P.M.) gold has gone up to 119, a rise of three and a half per cent. as compared with the same day last week. Foreign exchange has followed suit, and at the Second Board to-day sold at 130, certain parties refusing to name a rate.

The decline in stocks and bonds has not been so marked as the advance in gold. United States sixes of 1881, which on Thursday last were firm at 101½, have fallen to 98¾ *a* 99. Seven and three-tenth notes have receded from 104½ to 102¾ and 103. Certificates of Indebtedness are quoted at 98, and demand notes at 108 to 108¼. This depression is the result of a momentary panic caused by unfavorable reports in reference to military operations.

In State stocks but little has been done for the past week; and that at a decline. Missouri sixes, from 48½ last Wednesday, have receded to 46 and 45¾. Tennessee sixes are 49½, a decline of 1½. California sevens 99¾, against par one week ago. The Illinois War Loan has fallen from 99 to 97½. The amount of all these disposed of to-day is only $72,000, and there is evidently little disposition to either buy or sell at present. Of city and county bonds few sales have lately taken place.

Railroad securities continued to advance during the latter part of last week; on Monday they declined under the receipt of exaggerated reports of disasters to the Union forces; next day there was a general improvement; but on Wendesday another decline took place. At the close of the Second Board on that day, New York Central stood at 93 to 93⅛, a decline of 1¼. Erie (common) was 37, and preferred, 67¾, a decline of two per cent. Michigan Central was 67, a decline of 2½, and Michigan Southern, 31¼, against 32½; Do. Guaranteed, 63⅛, against 64¾; Galena and Chicago, 71¾, against 74¼; Cleveland and Toledo, 53, against 54; Chicago and Rock Island, 66½, against 68⅜ one week ago. It is to be observed that the reports of earnings for August are equally favorable with those of July, as far as can be ascertained; hence there is no cause for the downward movement other than political events, the general drift of which can be only matter of conjecture.

The depression in the price of stocks and bonds to-day has affected somewhat the money market. Some calling in of Demand loans at low rates is going on, and the rate for first-class paper may now be placed at five per cent, against four to five last week. In the Bank statement for this week a turn in the tide of deposits is noticeable. These (net) have receded from $143,347,340 to $141,971,741. In specie there is a slight gain, and in the circulation a considerable increase. The reduction in deposits is traceable to the private negotiation of three millions of Government 7.30 notes.

It is announced that the Secretary of the Treasury will soon begin to pay out large sums of the issue of demand notes authorized by the last Congress. When this shall take place the flood of deposits may expect to swell up much higher, flowing over into the government reservoir of five-twenty bonds. In passing it may be noticed that there is more money in our bank vaults, even at the depreciated price of currency as compared with gold, than would suffice to build and equip the Pacific Railroad, together with all the branch lines that have been authorized.

Commerce of the United States.

We give below an official statement of the exports of the United States for the years ending June 30th, 1859, 1860 and 1861. Though the last named year shows a large falling off in a few of the great staples, yet it presents such an increase in others that it must give very general satisfaction. Taking the products of the sea, we find the total exports amounted to $4,451,515 for the year 1860-1, which was a considerably gain on the preceding year, and only a fraction behind those of 1858-9. Of these, sperm oil constitutes nearly fifty per cent., or $2,110,826. The products of the forest fell behind, in the last named year, amounting to only $10,260,809, against $13,738,559 the year before; but the falling off took place principally in Southern products—timber, pitch, tar, turpentine, ashes, skins, furs, &c.

The animal products of agriculture possess more importance, and show a gain of eight and a half millions on 1858-9, and nearly four millions on 1859-60. In the items of wool, sheep, horses hogs, beef and pork, there is shown a moderate decrease for the last year given; but in tallow,

butter, cheese and bacon the gain was very large. The aggregate for 1860--1 was $24,035,100.

The vegetable food exported amounted to $74,-191,993, against $27,590,298 the preceding year, and $24,046,752 in 1858-9. It will be seen that this was nearly threefold the amount of the average sent abroad in the two years previous. The wheat exports sum up from $4,076,704 to $38,313,-624; the flour, from $15,448,507 to $24,645,849; the corn, from $2,399,808 to $6,890,865. The article of rice, on the other hand, receded from $2,-567,399 to $1,382,178.

In looking over these figures, the reader will please bear in mind that for about two months of the fiscal year 1860–61 the Southern ports were blockaded by our navy; and that trade had been largely interrupted during most of the winter by troubles then brewing in the Cotton States. This will account for the decrease of exports from that section of the country, and in part for the increase of Northern exports to Europe. The grain and meat which formerly found a market at the extreme South, had to be shipped abroad. It should also be remembered, on the other hand, that there was not then so large a demand for food in England and France as arose during the fiscal year which has just terminated.

Coming down to other agricultural products, we find that in 1860 61 the value of cotton exported was $34,051,483, against $191,806,698 the year before, and $161,434,923 in 1858-9. We suppose it will not have been generally believed that the export of that article has declined to such an extent, but the figures are positive. Tobacco of all kinds, unmanufactured, fell off from $15,906,547 the year before, and $21,074,038 in 1858-9, to $13,-784,710. Flaxseed and cloverseed showed a large increase: so did brown sugar; hops for the last year given amounted to $2,006,053, against only $32,866 the year before.

The aggregate manufactures exported reached the figure of $35,786,804, a slight increase as compared with 1858-9; but a decrease of three and three-quarter millions on those of 1859-60. The principal falling off took place in spirits of turpentine, manufactured tobacco, leather, gunpowder, iron castings, cotton fabrics, and oil cake. On other manufactures of iron there was a decided gain; also on copper and brass, spirits, glass ware, and a number of other articles of less importance. It will be seen that nearly all the exports showing a decline were either Southern products or made from them.

The total value of our exports for 1860-1 amounted to $227,966,169; for the preceding year, to $373,189,274, and for 1858-9, to $335,894,385. At first sight the contrast looks very unfavorably for the Free States; but it must be borne in mind that the precious metals were embraced in these several aggregates. In 1860-1 we sent abroad of gold and silver only $23,799,870, against $56,946,-851 the year before, and $57,502,805 in 8858-9—a difference of more than thirty-three millions. But taking specie out of the account, we find that the last year showed a falling off in the articles of cotton and tobacco, of $157,755,072 and $2,121,837 respectively. As the aggregate decrease, *minus* the gold and silver, was only $112,076,124, it will be seen that the exports from the Northern States *advanced forty five and a half millions*, in spite of the troubles then breaking out in the Southern States.

COMMERCE OF THE UNITED STATES.

PRODUCTS OF THE SEA.	1859.	1860.	1861.
Oil, sperm	$1,737,734	$1,789,089	$2,110,823

ST. LOUIS, ALTON AND CHICAGO RAILROAD.—By virtue of a decree of the Circuit Court of the United States for the Northern District of Illinois, the Trustees and Master Commissioners of the St. Louis, Alton and Chicago Railroad will sell at public auction, at Joliet, on the 27th of September, 1862, between the hours of 11 o'clock a. m. and 3 o'clock p. m., all that portion of the railroad extending from Alton to Joliet, formerly known as the Chicago and Mississippi Railroad, and subsequently as the St. Louis, Alton and Chicago Railroad. The sales include all the equipments, rolling stock, and every species of property belonging to the road.

Annual Report of the Commissioner of Patents.

UNITED STATES PATENT OFFICE, Jan. 31, 1862.

SIR:—In conformity with the requirements of the 14th section of the act of March 3, 1837, entitled "An act in addition to the act to promote the progress of science and useful arts," I most respectfully submit the following report:—

In the section of the act above referred to it is declared to be the duty of the Commissioner of Patents "to lay before Congress, in the month of January, annually, a detailed statement of the expenditures and payments by him made from said (patent) fund. And it shall also be his duty to lay before Congress, in the month of January, annually, a list of all patents which shall have been granted during the preceding year, designated under proper heads, the subjects of such patents, and furnishing an alphabetical list of the patentees, with their places of residence; and he shall also furnish a list of all patents which shall have become public property during the same period, together with such other information of the state and condition of the Patent Office as may be useful to Congress or to the public."

The first provision of the above instructions to the Commissioner requires "a detailed statement of the expenditures and payments by him made." For a more complete and intelligible exposition of the affairs of the office, I beg leave to submit the following statement:—

No. 1.

Number of applications received during the year	4,643
Number of patents granted, including designs, re-issues and additional improvements	3,340
Number of caveats filed	700
Number of applications for extension of patents	16
Number of patents extended	21
Number of patents expired Dec. 31, 1861	546

No. 2.

STATEMENT OF MONEYS RECEIVED DURING THE YEAR.

On applications for patents, re-issues, designs, additional improvements, extensions, caveats, disclaimers and appeals	$125,601 00
For copies and for recording assignments	11,753 44
Total	$137,354 44

No. 3.

STATEMENT OF EXPENDITURES FROM THE PATENT FUND DURING THE YEAR.

For salaries	$92,868 92
For contingent expenses	59,502 86
For temporary clerks	43,791 81
For withdrawals	23,173 82
For refunding money paid by mistake	1,306 00
For judges in appeal cases	850 00
Total	$221,491 91

No. 4.

STATEMENT OF THE CONDITION OF THE PATENT FUND.

Amount to credit of patent fund on January 1, 1861	$89,554 07
Amount paid in during the year	137,354 44
Total	$226,908 51
From which deduct expenditures during the year	221,491 91
Which leaves to the credit of the patent fund Jan. 1, 1862	$5,416 60

No. 5.

QUARTERLY STATEMENT OF EXPENDITURES FOR 1861.

First quarter	$61,050 28
Second quarter	52,439 25
Third quarter	52,104 58
Fourth quarter	45,897 85
Total expenditure	$221,491 91

No. 6.

1851	2,258	760	869	95,738 61	86,916 93
1852	2,639	996	1,020	112,056 34	95,916 91
1853	2,673	901	958	121,527 45	132,869 83
1854	3,324	868	1,902	163,789 84	167,146 32
1855	4,435	906	2,024	216,459 35	179,540 33
1856	4,960	1,024	2,502	192,588 02	199,931 02
1857	4,771	1,010	2,910	196,132 01	211,582 09
1858	5,364	943	3,710	203,716 16	193,193 74
1859	6,225	1,097	4,538	245,942 15	210,278 41
1860	7,653	1,084	4,819	256,352 59	252,820 80
1861	4,943	700	3,340	137,354 44	221,491 91

While the aggregate receipts of the office have been but $137,354 44, the expenditures have amounted to $221,491 91.

By the act of March 2, 1861, the expenses of the office were largely increased, as follows:

Salaries of examiners in chief	$6,437 53
Salaries of commission and chief clerk	1,500 00
Printing	17,854 37
Total	$25,791 90

The receipts of the past year have fallen $118,998 15 below those of the previous year; and the expenditures, omitting the above $25,791 90 as extra, have been $51,220 79 less than those of 1860. The cause of this great falling off of receipts must be apparent to every reader. The great inventive mind of the country has been attracted in another direction by the startling scenes of rebellion which have transpired. A state of civil war has deprived this office of the patronage of most of the slave-holding States; the enterprise of the loyal States has, to a great degree, been paralyzed, and the sale of patent rights, as an article of traffic, has, in a great measure, been abandoned.

To provide for this state of affairs I have been compelled to resort to a most rigid economy. To bring the expenditures as nearly as possible within the ability of the office to meet them, by way of retrenchment I dismissed five principal examiners, five assistant examiners, and five second-assistant examiners. The compensation fixed by law of the principal examiners is $2,500; the assistants, $1,800; the second-assistants, $1,600. The business required that seven of each of these classes should be retained; but a still further reduction of expenditure being necessary, I dismissed the principal examiners and appointed them assistant examiners, and they are now receiving but $1,800 per year; the assistant examiners were dismissed and appointed second-assistant examiners, at a salary of $1,600; the second-assistants were dismissed and appointed clerks, at an annual salary of $1,400. These officers, however, have all been performing the duties pertaining to their original positions. A large reduction was also made in the salaries of the clerks. The temporary clerks, who formerly received ten cents per hundred words for copying are now paid but eight cents. This was regarded as a legitimate reduction, as the office receives for such work, by law, the same compensation formerly paid the clerks, while the expense of superintending clerks, stationery, &c., exceeding $5,000 per annum. A large number of laborers, watchmen and attendants have been dismissed and their places are now vacant. The reduction of the salaries of the examiners and clerks has been very onerous to them. The expenses of living in this city are largely increased by the centering here of a large army, and the attraction of thousands of civilians, who largely consume the necessaries of life, which, at all times, are less abundant here than in many other portions of the country. The military necessity, which required the closing of the communication between the farmers of Virginia, from whom a greater part of the usual supplies come, and the market of this city has contributed much to the expense of living in Washington. For these reasons I respectfully submit to Congress the justice and propriety of conferring upon the Commissioner of Patents authority to refund the difference in the salaries of the examiners and clerks, between the amount allowed by law and that now received by them, whenever, in his opinion, the funds of the office will justify it.

The 14th section of the act approved March 2, 1861, provides "that the Commissioner of Patents be, and is hereby authorized to print, or, in his discretion, to cause to be printed, ten copies of the description and claims of all patents which may hereafter be granted, and ten copies of all drawings of the same, when drawings shall accompany the patents; provided, the cost of printing the text of said descriptions and claims shall not exceed, exclusive of stationery, the sum of two cents per hundred words for each of said copies, and the cost of the drawing shall not exceed fifty cents per copy; one copy of the above number shall be printed on parchment, to be affixed to the Letters Patent; the work shall be under the direction, and subject to the approval, of the Commissioner of Patents, and the expense of the said copies shall be paid for out of the patent fund.

In accordance with this provision of the law, and with the approval of the Secretary of the Interior, I contracted with a responsible party for the execution of the work. The issues from the 2d of March to the 1st of November, 1861, were printed in a superior style, and the drawing executed in the most satisfactory manner by the photographic art.

This feature of the law has given eminent satisfaction to the inventors of this country, and has commanded the admiration of inventors and the superintendents of patent departments in many other countries. The imperative necessity which required it to be suspended was and is greatly to be deplored; but I earnestly hope that Congress will take the necessary steps to resume it at as early a day as practicable.

The importance of furnishing to the public the most complete practical information in relation to

every patented invention is obvious. Each patent as the name implies, should be open to the perusal of all, and as it has the effect of a law should be published at the public expense, as all other laws. The people of the country should have full information as to all patented inventions, firstly, that by a knowledge of the full extent of the exclusive privilege claimed by the holder of a patent they may not be exposed to damages for infringing upon it; secondly, that they may not be induced to believe that the holder of a patent has exclusive privilege for more than is described and claimed in his specification; thirdly, that they may be informed as to the actual progress of the useful arts and avail themselves of the most useful inventions; and fourthly, that the whole inventive genius of the country may be stimulated by the examples and suggestions furnished by descriptions and representations of each year's inventions.

Congress has evinced its appreciation of the importance of furnishing such information by the large appropriations which it has hitherto authorized for the publication of the mechanical reports of this office. I have been furnished by the Superintendent of Public Printing with a statement of the cost of printing, paper, binding, &c., of the mechanical reports of this office for each of the last three years, which is as follows:—

1858, 3 volumes, 32,950 copies, cost...$85.659 08
1859, 2 volumes, 68,550 copies, cost...138,700 32
1860, 2 volumes, 66,550 copies, cost...118,992 09

These reports contain merely brief abstracts of the specifications made originally by examiners in the office, and latterly furnished by individuals out of the office by contract, and consequently prepared with the least possible expenditure of labor and expense, with the claims generally unintelligible, without the full description contained in the specifications. Meager and unsatisfactory as these abstracts are, the reports have been most eagerly sought for by the public. The publication of these reports will, I think, prove to have been most wisely suspended, if the substitute can be provided which was intended to be secured by the late law.

In making provision for this great public want, Congress should not be unmindful of the examples of other nation most advanced in the mechanical arts. In Great Braitain, France, Sardinia and Belgium, the specifications are published in full, and in such a form that printed copies may be furnished to all who may apply for them at cost price, while the entire publications are extensively distributed for the free use of the public. In Prussia, Saxony and Bavaria, official journals are published containing full abstracts and lists of the specifications of patents. The publications of specifications made by the French government consist of 91 volumes, quarto, of the old law, and 35 volumes, quarto, of the law of 1844. All of which have been presented to the library of this office.

In Great Britain the publications of the specification and drawings of patents has been made upon a scale of magnificence which entitles it to be regarded as one of her great national works. The great seal patent office has published the complete specifications and drawings of patents granted by that office since 1623, in two series, the old law series from 1623 to 1852, and the new series from October 1852 to the present time. The old law series, comprising 12.977 patents in number, are contained in about 900 volumes, 450 folio volumes of drawings, and the like number of imperial octavo volumes of letter-press. The indices form seven imperial octavo volumes. The cost of these works in 1859 amounted to £92,000. The expense of printing for 1859 was estimated by the Commissioner of Patents at £17,500.

The publications of the great seal office consist of the specifications and drawings of patents granted. (the drawings are not photographic,) a subject-matter index of patents, an alphabetical index of patentees, a chronological index of patents, commissioners' of patents journals, (published semi-weekly,) assignments of specifications of various classes of patents, of which twenty volumes have been published, and all are in course of publication.

The publications are distributed among one hundred and seven libraries and offices in Great Britain, twenty-six libraries in the British colonies, and twenty-two in foreign countries. Of these last, six are in the United States; the cost of which has been upwards of £10,000. The cost of the continuation is at least £1,500 weekly. For these costly works our government has been able to make no return except the meager abstracts heretofore published by us.

No attempt has been made in the publications ordered by me, under the provisions of the late law, to imitate the costly works published by the great seal office; but the publications, though not wanting in taste and finish, are believed to be of equal practical value. Many advantages have already been presented by a brief trial of this system in this office, among which may be mentioned the readiness of inventors to furnish more artistic and detailed drawings, at a greatly increased expense, with the view of exhibiting these inventions to the best advantage; a change which would greatly facilitate the examinations of the office as well as aid inventors in making inquiries as to the patentability of their inventions. Through the improvement in the drawings, thus effected, and by the adoption of the photographic system of illustration, it is believed that the publications, if continued, would surpass in practical value those of Great Britain.

The depressed condition of the financial affairs of this office, incident to the state of the country, has alone induced me to abandon the wise provision of Congress, requiring the printing in full of the specifications and drawings of the patents issued from this office. From a careful examination of the matter, I am induced to believe that if Congress were to appropriate a sum sufficient to defray the expense heretofore incurred in the printing of the specifications and drawings of the patents, and which will not exceed one-half the sum heretofore expended from the general fund of the government, the office will be able hereafter to meet the expense thus to be incurred. This will enable those who desire copies to secure them at a small cost comparatively with what they now have to pay for manuscript copies. I am induced to believe that an appropriation of fifty thousand dollars for the present year would enable the office to carry out this most salutary provision of the law of the last Congress. An abandonment of the publication of the mechanical reports, rendered unnecessary by the printing of the specifications and drawings, under the law of March 2d, 1861, would save to the government, after making the appropriation above requested, the sum of $

The restoration to the Patent Office fund of the amount withdrawn from it in conformity with the provision of the law of March 2, 1861, would be an act of simple justice to the inventors of the country, by whom this fund has been contributed. It would seem to be inequitable for them to bear the expense of introducing a new system of publication, the benefits of which are not for themselves but the general public. It is believed that this charge would not have been imposed by Congress upon the patent fund, if the diminution of then existing surplus fund, in consequence of the financial difficulties of the country, had been anticipated. The inventors have already been heavily taxed for the erection of the Patent Office building. There has been contributed by the patent fund for this purpose:

By act of July 4, 1836	$108,000
By act of March 3, 1849.....	50,000
By act of May, 1850	90,000
By act of September 30, 1850, appropriating $110,000, if so much remained in the patent fund....	71,000
Making the whole amount contributed..	319,000

The appropriation of this fund is justified only by the consideration that the inventors derive the most immediate benefit from the use of the Patent Office building. It cannot be doubted that the whole patent fund should be preserved for the use of those who contributed it, and certainly that the efficiency of the office for whose support this fund is primarily intended should not be impaired by the diversion of any part of it for secondary purposes. Congress has heretofore recognized the propriety of reimbursing the patent fund for all sums withdrawn for the benefit of the general public. Appropriations had from year to year been made of sums to be paid out of the patent fund for the collection of agricultural statistics and the purchase of seeds. By the act of March 3, 1855, the sum of forty thousand and seventy-eight dollars and seventy-eight cents was appropriated by Congress, to be paid out of any money in the treasury not otherwise appropriated, for the reimbursement to the patent fund of the whole amount thus withdrawn from the fund for the purposes above mentioned.

It is important to be observed that it is indispensable that the printing of these publications should be done under the immediate supervision and control of the office. The specification and drawings should not be removed from the office, as they are in constant demand for reference, and the inventors demand that there should not be a day's delay in issuing the patents after their date, which will be always liable to happen if the work should be done with other public printing. The type should be set up within the office, directly from the specifications. By doing this the cost of copy for the printer and the cost of recording the specifications will be saved, both of which are necessary when the setting of the type is done out of the office. The saving in these two items are the most important elements of the practicability of continuing the printing at the expense of the office.

As these publications, if continued, will be intended to supply the place of the former Patent Office Reports, and the gratuitous distribution to individuals will, of course, be dispensed with, some provision should be made to place them before the public. A sufficient number might be purchased by Congress at the same rate that may be charged to individuals, to place them in the most important libraries in each State, and to make exchanges demanded by national courtesy with foreign governments. A thousand copies, it is believed, will be sufficient to communicate the information as to the inventions of this office as effectually as has been done by the gratuitous distribution to individuals of the former reports.

PROPOSED AMENDMENTS.

By the law of March 2, 1861, it is provided that on filing each original application for a patent, except for a design, fifteen dollars shall be paid, and on issuing each original patent, twenty dollars shall be paid. Practically, this postponement of the payment of the final fee operates disadvantageously to the office. The evidence of the truth of this statement is found in the fact that more than four hundred patents which have been ordered to be issued are now in the office awaiting the payment of the twenty dollars. Thus the office is deprived of more than eight thousand dollars, for which it rendered its time and labor. If this provision should remain as it now is the number will largely increase, and, of course, will prove a great loss to the fund, and may prove the source of endless litigation. It may be further observed that, until the additional fees are paid on these applications, each operates as a cavent which may be perpetual without the yearly renewal and fee required in other cases for perpetuating caveats, the public deriving no benefit from the publication of the patent, and other inventors being excluded from obtaining patents for the inventions. I would respectfully suggest that the law be amended, either by restoring the former provision, that the whole fee be paid on making the application, twenty dollars to be repaid to the applicant when the application is finally rejected and withdrawn; or that the application fee, intended to cover the expense of examination, should be increased to twenty-five dollars, and

that ten dollars should be required on the issuing of the patent.

The avowed object of the second section of the act of the 2d of March, 1861, is "securing greater uniformity of action in the grant and refusal of Letters Patent." This is attempted to be effected by the creation of three examiners-in-chief, whose duty it is made to "revise and determine upon the validity of decisions made by examiners when adverse to the grant of Letters Patent, and in interference cases." It was expected by this means to relieve the Commissioner of a portion of the labor of the duties of office imposed upon him, but it has utterly failed to secure this last-named object.

As now constituted under the law, the examiners-in-chief form a tribunal independent of the Commissioner in all cases of rejection or interference decided by the examiner. An appeal lies from the examiner to them, from them to the Commissioner, and from him to one of the judges of the Circuit Court of the District of Columbia.

The chief justice has decided that an appellant must go through each tribunal before the judge of the Circuit Court can take jurisdiction of his case.

This state of the law and practice is far from beneficial to the public, and does not tend to secure greater uniformity of action in the grant or refusal of Letters Patent, and does certainly greatly augment the labor of the Commissioner. The act, in my opinion, should be so amended as to render the duties of the examiner-in-chief advisory only, so that an appeal, as formerly, may be taken from the examiner or from the Commissioner to the Circuit Court. All appeals should be taken from the decision of the examiner directly to the Commissioner, who could then refer it to the examiner-in-chief, or, if his time permitted, hear it in person.

The disturbed condition of the country has brought to view a deficiency in the patent laws with respect to the protection of the rights of assignees of inventions, which demands the attention of Congress. In many cases patents cannot be awarded to applicants except upon amendment of their specifications and claims. After an application has been once examined and rejected, the law requires a renewal of the oath of invention, by the inventor, before the amended specification can be re-examined. Cases have lately arisen where an inventor having filed his application for a patent, and assigned his whole interest in the invention, has disappeared or is *non inventus*, after the first examination and rejection; although in such case the defects in the specification might be cured by amendment, the inventor cannot be found to renew the oath required by law, and the assignee, the actual holder of the invention, is without remedy. In case of the death of an inventor before a patent shall have been granted for his invention, the right of applying for and obtaining a patent therefor devolves, by law, upon his executor or administrator. I would recommend that provision be made, by law, that when the inventor after making his application and assigning his invention may not be found, the right of renewing the oath of invention and amending the specification shall devolve upon the assignee.

It is difficult to conceive of any substantial reason for the provision contained in the 7th section of the law of 1836, which requires that an applicant for a patent, before making any alteration in his specification, "shall be required to make oath or affirmation anew." It is certain that no protection to the public is secured by this provision, while the requirement is a matter of great inconvenience to the applicant and the office. The inconvenience of this requirement has been particularly apparent since the number of foreign applications has been greatly increased, in consequence of the reduction of fees made by the law of 1861. Applications from Europe and California have often been delayed for months for the renewal of the oath required, before the slightest amendment could be made. I would recommend that the laws be so amended as to dispense wholly with the renewal of the oath of invention.

COPYRIGHT.

The duties connected with the custody of all books, maps and other publications deposited in the Department of the Interior, according to the laws regulating copyrights, having been imposed upon this bureau, for the execution of which duty a yearly appropriation is now required, I beg leave to recommend a reform which will not only save this expenditure, but secure other important advantages to the public.

By the act of Congress approved May 31, 1790, it was required of every person desiring to secure a copyright, to deliver a copy of the work to the Secretary of State within six months of its publication, "to be preserved in his office." This requirement continued in force under the amendment to the act approved April 20, 1802, and by the "act amending the several acts protecting copyrights," approved February 3, 1831, it was required that a copy of the work should, within three months of its publication, be delivered to the clerk of the district court of the United States of the district wherein the author or proprietor should reside, and that it should be the duty of the clerk once at least in every year to transmit all copies of works thus received to the Secretary of State," to be preserved in his office." By an act approved February 5, 1859, the Secretary of the Interior was substituted for the Secretary of State, and all works and records heretofore received were ordered to be transmitted by the latter to the former, no change in any other provision of the copyright law being made.

It appears, therefore, that for a period of seventy years, from 1790 to 1860, one copy of every work claiming security of copyright has been required by law to be deposited in an executive department of the federal government for a period of forty years by the author directly, and for thirty subsequent years through the agency of clerks of the United States district courts. The result contemplated by this requirement was a collection of copyright matter at the national capital in the lapse of years, as valuable as it would be interesting, and it is to be regretted that circumstances should have tended in any degree to defeat this end.

The earliest record of the receipt of a copyright by the Secretary of State bears date January 19, 1796, although copies of two works, one dated 1794 and the other 1795, are found in the library, of the receipt of which no record exists. From 1796 to 1831, during which period copyrights were required to be transmitted directly to the Secretary of State by the author or proprietor, the record of certificates of receipt is unbroken; and during the eleven years from 1831 to 1841, both inclusive, the register of works received at the Department of State from United States district courts under the act of the former years, seems equally perfect. But here ceases all record or register at the Department of State of copyrights received, and for a period of twenty years, from 1841 to 1860, when a register was commenced at this office, whither the service had been transferred, the only source available from which could now be compiled a complete catalogue of all the copyrights entered during that period in the United States, are the lists and records, more or less perfect, transmitted more or less regularly by the clerks of the United States district courts, in accordance with the act.

From 1796 to 1831 the whole number of copyright works actually received at the Department of State was 2,112 while the whole number for the same period received from the Department of State in 1859 at the Patent Office was but 929, or less than one half. The whole number of copyrights received at the State Department from 1831 to 1841, both inclusive, was 10,073, while the whole number received at the Patent Office in 1859 was 6,017. The whole number received at the State Department from 1841 to 1859, both exclusive, is estimated in round numbers at 40,000, while the whole number received for the same period at the Patent office did not exceed 30,000.

Out of some 50,000 copyright works, therefore, deposited in accordance with law, to be preserved, from 1790 to 1859, less than 40,000 are now to be found. It appears, also, from careful comparison of the records of applications for copyright with the list of works received for a series of years, that not more than two-thirds of all the works for which a copyright is requested are ever deposited with the clerks of the district courts of the United States, as is required by the act of 1831, or, if so deposited, are ever transmitted by the clerks to this city, as is also required.

The evil resulting from the continuance of such a state of things is too obvious to demand comment. It is easy to suppose a case in which the absence of copyright work from the place where the law requires it to be found, when called for as a legal voucher, might prove extremely detrimental to the interests of its proprietor, especially when it is considered that judicial decisions hold that proof of the fulfillment of the act in the minutest particular is indispensable to the security of the right.

The copyright works now received at this office are carefully registered and preserved, and this done at an annual expense of more than $1,600. That this service may be rendered self-sustaining, like the Patent Office, can be readily demonstrated, and thus a saving of the above named amount be made to the treasury.

At the Stationers' Hall, in London, all applications for copyrights in England are made; from thence all certificates on the subject are issued, and there all works are received for preservation. The same service could be performed at the Patent Office for the United States, and be sustained by the same amount of fees now allowed clerks of the United States district courts by the act of 1831.

Under the existing law, the perfecting of a copyright is made dependent on the performance of certain duties by district clerks of the United States, no penalty being prescribed for neglect of those duties. These officials are not subject by any law to the directions of the department or office charged with the superintendence of the service. Hence, with perfect impunity, a clerk in one of the districts has for eight years refused to transmit either records or copyrights to this office, in obedience to the law, on plea of insufficiency of compensation. Other clerks are equally negligent of their duties. The present system has utterly failed to secure the object contemplated by the original enactment, and so valuable to those authors who desire protection for their works. Had the plan now suggested been carried out with the same fidelity as has been the Patent Office, we would now have a copy of almost every book, pamphlet, map, chart and musical composition ever published in this country. I need not enlarge upon the value of such a collection.

It is a subject of congratulation, to which I am happy to refer in closing this report, that notwithstanding the occupation of the public mind with the paramount thought of defending the government, and the apparent diversion of so much activity from peaceful to military pursuits, the business of this office, so sensitive to any financial or industrial change, shows a vitality in the industrial arts of the country not to have been expected in time of war. Of the applications for patents made during the month of December last, arranged according to the classification of the office, there were, in the classes of

Agricultural implements	63
Caloriffics and photics	45
Chemical processes	40
Land conveyance and engineering	59
Fibrous and textile manufactures	9
Fine arts	24
Household furniture	31
Leather, harness, and wearing apparel	42
Lumber, stone and clay	19
Philosophical and surgical instruments	22
Navigation	8
Steam & air engines, hydraulics & pneumatics	35
Metallurgic manufactures	23
Firearms and implements of war	58

It appears by this statement that 420 were for inventions in the peaceful arts, and 58 only in im-

plements of war. Although some of the former are adapted for military use, it would be safe to say that five-sixths are inventions connected with productive industry—a proof that the productive interests of the loyal States have not been materially disturbed by the national convulsion.

As the power to maintain war depends upon the productive labor of the country, and the capacity of production is increased by new inventions, it is hoped that Congress will regard the encouragement of an institution which stimulates and protects the inventive resources of the country as not simply a duty, but a national necessity.

D. P. HOLLOWAY,
Commissioner of Patents.

HON. GALUSHA A. GROW,
Speaker of the House of Representatives.

OTTO AHLSTROM,

MANUFACTURER OF THE

LOUDON & AHLSTROM'S

PATENT EXPANSION SCREW FASTENINGS,

A QUICK and sure means of making preparatory Fastenings —The hole not requiring to be large at the bottom.

Also for ANCHORING LIGHT-HOUSES, BEACONS, BUOYS, BRIDGES, DAMS, FORTIFICATIONS, etc.

For NEWEL, GATE AND FENCE POSTS, and IRON RAILINGS in various ways.

Also, a CHEAP and ready means for fastening Iron or other ornaments (large or small) to stone or brick buildings.

For STAPLES, HINGES, AWNINGS, SIGNS, SHUTTER FASTENERS, LEADER HOOKS, etc.

For INSIDE WORK, such as for fastening articles to Hard Walls, Marble, etc., without hammering or using lead. For fastening Marble Tops to Furniture, etc. They are also so constructed as to be applied in Wood.

For LIFTING PURPOSES, such as Foundrymen's Tools for raising their patterns of wood or metal from the sand. They may be used in tapped or smooth holes.

Orders promptly executed by

OTTO AHLSTROM,
22nd St., 2nd Avenue, N. Y.

PROPOSALS
FOR $250,000 OF THE CROTON WATER STOCK OF THE CITY OF NEW YORK.

SEALED proposals will be received at the Comptroller's Office, until THURSDAY, September 25th, 1862, at two o'clock P. M., when the same will be publicly opened for the whole or any part of the sum of two hundred and fifty thousand dollars ($250,000) of the Croton water stock of the City of New York, authorized by Chapter 372 of the laws of 1860, and as amended by Chapter 181 of the laws of 1861, and by an ordinance of the Common Council, approved by the Mayor October 4, 1861, for increasing the supply of Croton water, etc.

The said stock will bear interest at the rate of six per cent. per annum, payable quarter-yearly, and the principal will be redeemed November 1, 1883.

The proposals will state the amount of stock desired, and the price per one hundred dollars thereof, and the persons whose proposals are accepted will be required to deposit with the Chamberlain of the City, within ten days after the opening of the bids, the sum awarded to them respectively.

On presenting to the Comptroller the receipts of the Chamberlain for such deposits, the parties will be entitled to receive certificates for equal amounts of the par value of the stock, bearing interest from the date of payments.

Each proposition should be sealed and endorsed "Proposals for Croton Water Stock of the City of New York," and the same inclosed in a second envelope, addressed to the Comptroller.

The right is reserved to reject any or all of the bids, if considered necessary, to protect or promote the interests of the City.

ROBERT T. HAWS, Comptroller.

CITY OF NEW YORK, DEPARTMENT OF FINANCE,
COMPTROLLER'S OFFICE, Aug. 26, 1862. 3t35

THE NEW YORK CENTRAL RAILROAD COMPANY,
TREASURER'S OFFICE, ALBANY, July 19, 1862.

EIGHTEENTH SEMI-ANNUAL DIVIDEND.—The Directors of this Company have declared a Semi-annual Dividend of Three per cent. on the Capital Stock thereof,—free of the United States Income Tax, which will also be paid by the Company—payable on the 20th day of August next, upon stock registered at New York, Boston and Albany and on the 20th day of September next upon stock registered at London.

Stockholders whose stock is registered at New York, will receive their Dividends at the office of DUNCAN, SHERMAN & CO.; those whose stock is registered at Boston, at the office of J. E. THAYER & BROTHER; those whose stock is registered at Albany, at the ALBANY CITY BANK; those whose stock is registered at London, at the UNION BANK OF LONDON, the latter at the rate of 4s 1d to the dollar.

The Transfer Books will be closed at the close of business on Thursday, the 31st day of July inst., and will be re-opened at New York, Albany and Boston on the morning of Saturday, the 23d day of August next.

8t30 JOHN V. L. PRUYN, Treasurer.

CAR DUCK.

HEAVY 4-PLY FITCHBURG DUCK OF ALL WIDTHS, 11 to 140 inches, PLUSHES, BURLAPS, CAR HEAD LININGS, and all kinds of RAILROAD SUPPLIES.

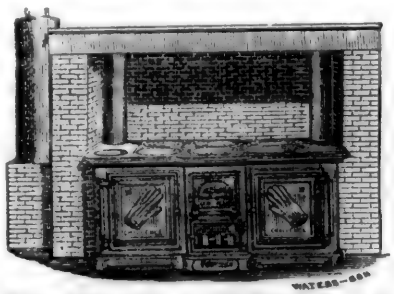
Sanford's CHALLENGE HEATERS SET IN BRICK, PORTABLE OR AS FIRE PLACE HEATERS,



FOR WARMING BY ONE FIRE WITH PURE, SOFT AIR Dwellings, Churches, Hotels, Public Halls, Railroad Depots, Vessels, etc., WITH AND WITHOUT REGISTERS.

THE MOST POWERFUL HEATERS AND THE Greatest Fuel Savers in the World:

With an unparalleled mass of unimpeachable testimony of well-known Citizens, Ministers, Doctors, Lawyers, Merchants, Mechanics and others.

Send for pamphlet containing full description and testimonials,

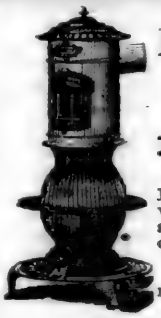
SANFORD, TRUSLOW & CO.,
Nos. 239 and 241 Water st., N. Y.

Challenge Air-tight KITCHEN RANGES,

May be placed in a fire-place without masonry, and with or without water-back; or may be set out on feet, as an ordinary stove.

This range, already very popular, has the LARGEST OVEN of any in the market; BAKES PERFECTLY, never burning to brown at the bottom; BOILS, ROASTS and BROILS with unequalled facility and dispatch, and with extraordinary ECONOMY OF FUEL, which may be either coal or wood. Flues large and easily cleaned. A child can manage it, so simple is its construction. Castings extra heavy, and design plain and chaste.

Four sizes, adapted to families and hotels.



Beacon Light SUMMER AND WINTER PORTABLE RANGE,

Is a very popular range, having six boiler holes, one large oven that bakes perfectly, with an arrangement for roasting or heating irons at the end. It is very economical of fuel. For a FEW DOLLARS a family may be supplied with a PERFECT COOKING APPARATUS, equal to the highest price stove in the market.

Three sizes, adapted to coal, or wood.

SANFORD, TRUSLOW & CO.,
239 and 241 Water st., N. Y.

SANFORD'S MAMMOTH OR GLOBE HEATERS.

The best stoves for RAILROAD DEPOTS and SHOPS, and all places where a great heat is required. They are very durable, and very economical of coal.

Beware of imitations that are inferior in strength and in other respects.

TESTIMONIALS.

HUDSON RIVER RAILROAD OFFICE, N. Y.

This Company have now in use, over two hundred of Sanford's Mammoth Heaters, in Station Houses, Work Shops, and Engine Houses; we commenced using them in 1853, and some of the first stoves put up are still good and in use. We consider them the best Heaters now in use.

J. M. HEBARD, Supply Agent.

UNION FERRY COMPANY.

The Mammoth Heaters have been used by this Company in their waiting rooms at the several ferries and found to be very excellent stoves and more durable and valuable than any heretofore used. CYRUS P. SMITH, Managing Director.

MANUFACTURED AND SOLD BY

SANFORD, TRUSLOW & CO.,

The COSMOPOLITE PARLOR RADIATOR, & GAS BURNER,

Introduced one year ago, already ranks as the LEADING STOVE for PARLORS, SITTING ROOMS, and all places where a soft, pleasant heat is desired.

Fire may be kept all winter with an astonishingly small supply of coal.

Send for description and testimonials.

SANFORD, TRUSLOW & CO.,
Nos. 239 and 241 Water st., N. Y.

Messrs. MUNN & CO.,

PROPRIETORS OF THE SCIENTIFIC AMERICAN continue to solicit patents in the United States and all foreign countries, on the most reasonable terms. They also attend to various other departments of business pertaining to patents, such as Extensions, Appeals to United States Courts, Interferences, Opinions relative to Infringements, etc. The long experience Messrs. MUNN & CO. have had in preparing specifications and drawings, extending over a period of sixteen years, has rendered them perfectly conversant with the mode of doing business at the United States Patent Office, and with the greater part of the inventions which have been patented. Information concerning the patentability of inventions is freely given, without charge, on sending a model or drawing and description to this office.

Consultations may be had with the firm between 9 and 4 o'clock, daily, at their principal office, No. 37 Park Row, New York. We have also a branch office in the city of Washington, on the corner of F and 7th sts., opposite the United States Patent Office. This office is under the general superintendence of one of the firm, and is in daily communication with the principal office in New York, and personal attention will be given at the Patent Office to all such cases as may require it. Inventors and others who may visit Washington, having business in the Patent Offices, are cordially invited to call at their office.

MUNN & CO., are very extensively engaged in the preparation and securing of Patents in the various European countries. For the transaction of this business they have offices at Nos. 66 Chancery Lane, London, 29 Boulevard St. Martin, Paris, and 26 Rue des Eperonniers, Brussels. Probably three-fourths of all the European Patents secured to American citizens are procured through this Agency.

A pamphlet of information concerning the proper course to be pursued in obtaining Patents, the requirements of the Patent Office, etc., may be had gratis upon application at the Principal Office, or either of the Branches. They also furnish a Circular of Information about Foreign Patents.

During the last sixteen years the business of procuring Patents for new inventions in the United States, and all foreign countries has been conducted by Messrs. MUNN & CO., in connection with the publication of the SCIENTIFIC AMERICAN; and, as an evidence of the confidence reposed in them by the inventors throughout the country, we would state that we have acted as agents for more than FIFTEEN THOUSAND Inventors! In fact, they have become identified with the whole brotherhood of Inventors and Patentees, at home and abroad. We would state that we never had a more efficient corps of Draftsmen and Specification Writers than are employed at present in our extensive Offices, and we are prepared to attend to Patent business of all kinds, in the quickest time and on the most liberal terms.

Communications and remittances should be addressed to

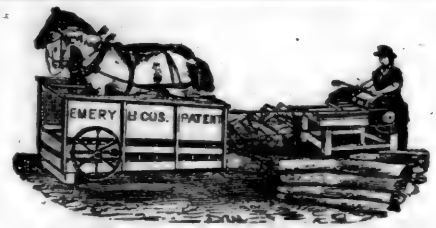
CUMBERLAND COAL.

THE BORDEN MINING COMPANY

ARE now prepared to fill orders and to make contracts for the season of 1862, for **CUMBERLAND COAL,** DELIVERABLE ON BOARD VESSEL AT **Baltimore, Md., Alexandria, Va.,** or **Georgetown, D. C.** Purchasers may rely upon the Coal proving equal in quality to that heretofore furnished.

The Company also have the pleasure of announcing that they have completed, after two years' labor, their shaft and machinery upon their new property in the VALLEY OF GEORGE'S CREEK, and are lifting from the very heart of the Coal Basin a superior and perfect article of **BITUMINOUS COAL,** remarkably free from impurities of every description, and possessing qualities peculiarly adapting it to Locomotive use, and to generating steam under all circumstances. This Coal will be known in market as **"BORDEN'S PIT COAL."**



Our Railroad friends, and others requiring a superior Coal, will find it to their interest to give this a trial before contracting elsewhere.

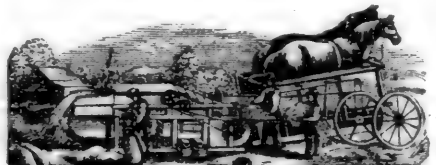
IMPORTANT
TO
RAILROAD COMPANIES.

THE ATTENTION OF
RAILROAD MANAGERS
Is called especially to the Machines manufactured especially for the use of Railroad Companies by the proprietors of the
ALBANY AGRICULTURAL WORKS,
CONSISTING OF
EMERY'S PATENT
Railway Horse Power,

Made changeable for both right and left hand work, also with changeable degrees of forces and motions of the driving Pullies without changing the Speed and Labor of the Horses, thereby adapting them to the different uses required, as Sawing Wood, Pumping Water, Driving Elevators and Machine Shops, Foundries, etc. The Power is also adjustable to any degree of wear or use, so as to always insure its working with its greatest efficiency. All the running chains in these Powers are made of the best MALLEABLE IRON which gives to them triple the strength and durability of Grey Iron which last is universally used by all other Railway Horse Power Manufacturers—thereby at the same time lessening the weight of these several hundred pounds, making them less cumbrous for handling and transportation.

WOOD SAWING MILLS.



These Sawing Mills are made upon the most approved and convenient plans in use. Having a heavy plate fly-wheel fixed to the Mandrill with a Ratchet or catch pulley for the driving hand on the outside of the fly-wheel—the journal bearings are fitted with Babbet Metal—the wood carriage traverses on iron ways and gibbs—a 24 or 26 inch Saw is fitted, filed and set in working order and the plates warranted. When desired, a 14 inch saw is fitted, also a table for the purpose of slitting boards, etc., for fencing and carpenter work.

The whole together forming one of the most complete and desirable sets of machines for their purposes. They are already in very general use on nearly all the principal Railroads in this country.

PRICE,	ONE HORSE POWER	**$90.00**
"	TWO " "	**120.00**
"	SAW MILL, 24 in. Saw	**37.00**
	SETT BANDS and EXTRAS	**5.00**

PUMPING ENGINES

Of different kinds for Raising Water for Railroad tanks and other purposes, can be furnished on demand with Reciprocating or Rotary Pumps—fitted to be operated by these Horse Power and the best adapted for Railroad and Mining purposes. One of the SEVENTY-FIVE DOLLAR PUMPING ENGINES when driven by the TWO HORSE POWER has a capacity equal to any Four or Five Horse Power Steam Engine and Pumping Machine for the same purposes.

THRESHING MACHINES

Of the most approved kinds, for one and two horses and with simply Separators, or with Complete Cleaners which fit the grain for market in one and the same operations, and of the most approved construction.

They are very extensively introduced into all the grain-growing sections of this country and the world. They are especially adapted to the force of the above Horse Powers and can be driven by Steam or Water power with equal advantage. They will be furnished on the most liberal terms and warranty.

Liberal discounts made to RAILROAD COMPANIES from the above prices, and agents solicited for the sale of their manufactures.

For further particulars see the new Illustrated and Price Catalogue of the ALBANY AGRICULTURAL WORKS, furnished gratis on application to the proprietors.

THE GREAT FIRE IN TROY.

Unparalleled Triumph

OF

LILLIE'S SAFES!

The following certificates explain themselves:

TROY CITY BANK, May 21, 1862.

LEWIS LILLIE, Esq.—Dear Sir: I am sure it will give you as much pleasure to know as it does me to say, that in the recent fire of the 10th inst., which desolated our city and destroyed our Banking-house, the contents of our Bank vault, though the building itself was a heap of ruins, remained entirely unharmed. This result we attribute entirely to the fact that our old Wrought Iron Doors were, about two years since, exchanged for a set of your celebrated Chilled and Wrought Iron Doors and Frames. With the old doors, not a book or paper in the Vault could have been saved; as it is, nothing in it was even damaged, though exposed to the most intense heat.

Yours, respectfully, S. K. STOW, Cashier.

TROY, N. Y., May 14, 1862.

The undersigned, using **Lillie's Chilled and Wrought Iron Fire and Burglar Proof Safes,** at the time of the late disastrous fire in this city, would state that our safes were subjected to a severe test by fire, the heat varying in intensity, according to the locality and surroundings. The time they were exposed to the fiery ordeal, unprotected by water, varied from 24 to 72 hours. We would say that our money, papers, books, etc. were well preserved, and the Safes are suitable for further use. By comparison with Safes of other manufacture, equally exposed, we have no hesitancy in recommending Safes of Lillie's manufacture to the public on their demonstrated merit as entitled to unparalleled confidence as fire-proofs.

Jonathan Seaman.

Not dug out—nothing in them.

TROY, May 19, 1862.

The undersigned had one of **Lillie's Wrought and Chilled Iron Safes,** which went through the fire of the 10th of May. The Safe was exposed to a severe fire for over 24 hours. In falling it turned on its face, and when turned up to open the doors was red-hot. The back of the lower part of the Safe (behind the books) was filled with pennies, which, in falling over, pressed against the books, and brought them directly in contact with the doors. The wrappers on the pennies were mostly good. The books were unfit for further use, but the writing on them was partially legible and could be copied.

DUSENBURY & ANTHONY.

TROY, May 19, 1862.

This is to certify that we had in our store, in this city, when it burned, one of **Lillie's Small Safes,** which was in the fire, without water on the building or Safe. Most of the valuables were removed before the fire, and therefore we were not in haste to get the Safe out of the burning ruins. Some of the papers left in the Safe were legible when taken out, but most of them were charred.

I. M. SINGER & CO.,
Per G. W. BABCOCK, Agent.

This is to certify that the undersigned had one of LILLIE'S Patent Chilled Iron Safes in their store, which was burned during the late severe fire in this city, and we are happy to state, the Safe preserved all its contents in first-rate condition. All the papers were legible, and the books will do for further use, without even rebinding.

GRANT, NUTTING & CO.

The foregoing comprises all the Safes of my manufacture that were in the fire, and below will be found certificates from all the owners of Safes manufactured several years since, by World's Safe Company, who used my Patent Chilled Iron Shell, but not my Fire-Proof Cement.

LEWIS LILLIE.

WORLD'S SAFE COMPANY'S SAFES.

TROY, May 19, 1862.

The undersigned, having Safes manufactured by the late World's Safe Company, and which were subjected to the great fire of the 10th inst., in this city, would state that our Safes were exposed to a severe heat, being confined in the burning ruins, unprotected by water, from one to three days. On opening the Safes the contents were mostly legible, and to a far greater extent than could be reasonably expected of any Safe. We concur in the opinion that the Safes manufactured by LEWIS LILLIE, which were subjected to the fire for a longer time and preserved their contents, are superior and powerful protectors against fire, and by this test we are prepared to recommend them as such to public patronage.

Lyman Bennett,
Flood & Dunham,
John Hutchinson,
Silliman, Matthews & Co.,
E. L. Mallory,
E. H. Virgil,
Sup't National Express Co.

The undersigned, having Safes manufactured by the late World's Safe Company, and which were subjected to the great fire in this city, would state, that on opening our Safes the contents were mostly legible. We concur in the opinion that the Safes manufactured by LEWIS LILLIE, which were subjected to the fire for a longer time and preserved their contents, are superior and powerful protectives against fire, and we are happy to recommend them to public patronage.

W. & L. E. GURLEY,
R. L. & G. DRAKE,
LEONARD SMITH,
H. E. & W. ALENDORPH, Absent.

TROY, May 19, 1862.

To whom it may concern: We would certify that when the recent fire broke out in this city, we took out from our Safe (which was made by World's Safe Company) all our books, papers, etc., and then left it to the flames without shutting the door, and the Safe will do for further use by being repaired, although the book case was destroyed by the door being left open through the fire.

ACKLEY & CO.

TROY, May 19, 1862.

The undersigned, using Safes manufactured by the World's Safe Company, at the time of the late disastrous fire on the 10th instant, in this city, would state that our Safes were filled with fire-brick for the fire-proof, and while several of this class preserved their contents, ours were considerably charred, and only a part legible. In justice to Mr. LEWIS LILLIE, we are pleased to state that Safes of his manufacture proved to be powerful protectors against fire, and have preserved their contents, after having been exposed to the fiery ordeal, unprotected by water, from one to three days.

Stephen Holton,
Bennett, Strickland & Fellows,
Corloss & House,
Luther Greenman,
E. W. Johnson,
J. H. Goodsell.

TROY, N. Y., May 17, 1862.

LEWIS LILLIE—Dear Sir: We were using at the time of the late severe fire of 10th inst., a Safe purchased in 1852 of the late World's Safe Company. The contents were considerably charred, but our Ledger is mostly legible, and we are able to copy it.

The Safe was subjected to a severe heat for over eighteen hours, and we are satisfied that if water had been thrown on the ruins, as is ordinarily the case, the contents would have come out uninjured. You will please repair our Safe, placing in it the improvements embraced in Safes of your manufacture, and oblige

SHELDON & GREENE.

N.B.—The above Safe is believed to have damaged the contents more than any of those named in this circular.

There were only seven Sheet Iron Safes, made by Herring and others, outside of the railroad depot, that were exposed to the fire, four of which were entirely burnt out; the fifth was saved by being early cooled off by water; the remaining two were not severely tested.

LEWIS LILLIE.

The Pacific Railroad Convention.

Elsewhere we publish a full account of the proceedings of the Pacific Railroad Convention at Chicago, on Tuesday, Wednesday and Thursday of last week. In this history-making age, the action taken on that occasion will enter largely into the history, not only of this country, but of the world. The construction of a railway across this continent will influence very considerably the commerce of the great nations of Europe and Asia, and will thus constitute an epoch like the founding of Alexandria and the discovery of the Cape of Good Hope. As respects our own country, it will bind the Atlantic Slope and the great Mississippi Valley to the Pacific States. These, by the time of its completion, will constitute the equal of a first class empire in area, population, resources and wealth. Let the imagination revel as it may, it will be admitted that the facts of progress on our Pacific coast, for the last fifteen years, exceed the wildest dreams of fiction. With mineral and agricultural wealth so vast and so various, there is no reason why the progress already achieved should not extend indefinitely, and that it should not embrace even the great American Deserts in its grasp. Plains that have hitherto been by general consent abandoned to desolation, may yet wave with fruitful harvests, and the most useful metals be extracted from almost every square mile of the Great Basin.

The names of the Commissioners are a sufficient guaranty of the character of this Convention. They represent all the knowledge that has been accumulated in the thirty years of our railroad history, and much of the capital invested in our thirty thousand miles of roads in operation. With these stand associated a number of leading bankers, and men who have made their marks high in the political history of their country. They were no body of stock operators; but one of earnest, practical men, who looked well into the nature of their undertaking, and proceeded to work like those who are resolved to accomplish it. With some differences of opinion as to details, there was no discordance; with frequent allusion to the political value of the work, there was not the slightest tinge of partyism. A sceptic as to the feasibility of the project might well be converted by reading the proceedings—so careful was the scrutiny of the bill as it passed Congress, so temperate the speeches and resolutions, and so unanimous the opinion in favor of the work.

A few years ago wood and water were believed to be the great *desiderata* lacking on every feasible route. Within eighteen months, however, two valuable beds of coal have been discovered, one on the eastern base of the Rocky Mountains, declared by Gov. Evans to be as good as the best in Illinois; the other in the Wahsatch mountains, near the dividing line between Colorado and Utah Territories. It is fair to assume that other deposits will in course of time come to light; but these alone, owing to their locations, would suffice for all purposes of operating the road. The want of water is now only a dream.

The President in his address adverted to certain defects existing in the charter. That respecting the condemnation of private lands belongs rather to the Territorial Legislatures than to Congress, and will doubtless be removed at an early day. We presume there will be no objections made in Congress to most of the other proposed amendments: as the right to declare dividends out of the net earnings, after satisfying the government claims; the limitation to some reasonable figures of the preferential rights of the nation in transporting troops, munitions, etc.; also authority to mortgage the lands donated. It will probably be different with respect to an extension of the period assigned to complete the road and connections—at least, for the present—as well as the twenty-five per cent. security remaining in the hands of the government as a guaranty of good faith on the part of the Company. But some arrangement may be made whereby this deposit can be in the meantime turned to good account.

So far every thing has worked more smoothly than might have been expected, in view of the great struggle now going on. Were everything ready for breaking ground, the want of *labor* would be very inconveniently felt at this moment. We have money in abundance, but not men. Many months, however, will be required to arrange the details as to receiving subscriptions, making the surveys, reports, etc. By the time these shall have been completed, it is probable we shall have half a million returned volunteers, many of them in want of employment. The condition of Europe is such that a large immigration may be looked for with the return of peace, whenever their services shall be required. No trouble, therefore, need be felt on this score. It will be well for the Executive Committee to proceed to work with all the expedition possible; as delay on their part may only have the effect of rendering Congress less disposed to make the amendments desired. Let every friend of the enterprise work as if success depended upon his individual efforts; and let the nation's history recount not merely successes on fields of strife, but also in the peaceful employment of binding together distant communities by that new bond of intercourse, the PACIFIC RAILROAD.

St. Lawrence and Ottawa Railway.

We learn from the prospectus of the St. Lawrence and Ottawa Land and Railway Company, just issued, that it is now proposed, under an agreement entered into with the Brockville and Ottawa Company, to raise a capital of 300,000*l.* for the completion of the line from its present terminus at Almonte to Pembroke, a distance of 66 miles, upon three classes—A, B, and C,—all the holders of which will participate *pro rata* in the land grant. The A class, composing the capital of 300,000*l.*, will entitle the holders to a preferential dividend of 7 per cent., in addition to a free land certificate representing an interest in a proportion of the Free Progressive Grant of 65 acres of land for every six shares. The class B shares into which the debentures in the Brockville and Ottawa Company are to be converted, will represent a por-

tion of the capital not exceeding 140,000*l.*, and entitle their holders, after the payment of the preferential dividend, to a participation in the net profits until these amount to or exceed 6 per cent. The class C, into which the existing shares in the Brockville and Ottawa Company (not more than 60,000*l.* in nominal money value) are to be converted, will have the residue of the profits divided amongst them; and the division will continue until the profits amount to 6 per cent. After providing for the above three charges the surplus profits will be equally divided amongst the A, B, and C shareholders, together with the profits of the periodical sales of the land. A sum not exceeding 60,000*l.* is to be paid to the Brockville and Ottawa Company, in full discharge of its liabilities, and the railway, plant, and land will be conveyed to the present company free from all liabilities, except those represented by the B and C shares and an annual interest of 4,500*l.* payable to the municipalities. The railway, commencing at Brockville on the St. Lawrence and passing through or near the village and port of Arnprior, Castleford, Renfrew, and other valuable settlements, will terminate at Pembroke, the well-known emporium of the lumber trade. The main line, 119 miles in length, is united by a branch 11 miles long with Perth, the capital town of the united counties of Lanark and Renfrew. Connecting the river Ottawa with the St. Lawrence, it forms an important medium of railway communication between the north-west and the southern and eastern districts; and by its junction with the Grand Trunk Railway at Brockville, a direct route is obtained from either extremity of the province and to all parts of the United States.—*Canadian News Aug. 7.*

Hancock County Railroad Bonds--Ohio.

COUNTY BONDS ISSUED TO PAY FOR THE STOCK OF THE DAYTON AND MICHIGAN RAILROAD COMPANY, WHEN NEGOTIATED AND IN THE HANDS OF A BONA FIDE HOLDER, THEIR REGULARITY CANNOT BE DISPUTED.

An act of the General Assembly of the State of Ohio authorized the commissioners of certain counties through which the Dayton and Michigan Railroad Company might be located, to subscribe to the capital stock of that company and issue negotiable bonds in payment of such subscription. A subscription was accordingly made by the commissioners of the county of Hancock, who issued certain bonds in payment of the subscription and delivered them to the agent of the company, by whom they were negotiated. Four of these bonds, of $1,000 each, came into the hands of one Daniel H. Treadwell, who now sought a writ of mandamus to compel the county to pay the bonds. Among other defences, the county urged, that there had been a fraudulent combination between the Railroad Company and the County Commissioners to make a formal, but not a real location of their road, and a subscription, ostensibly for the benefit of that railroad company, but really for the benefit of another railroad company; to aid which, by a subscription to its capital stock, or by a loan of credit, there was no legal authority. The county therefore claimed that the subscription and the bonds issued in payment were void.

One of the provisions of the act was that all bonds "issued and negotiated" by the commissioners, "and regular on the face thereof," shall "in the hands of any *bona fide* holders thereof, be deemed and taken in all courts and elsewhere, as conclusive evidence of the regularity of everything required by this act, preliminary to the issue and negotiation" of the bonds.

The case was decided by a General Term of the Supreme Court of the State of Ohio, which held that the bonds in question, being regular on their face and having been issued and delivered to the railroad company, ostensibly in payment of a subscription of stock and for the purpose of being put into circulation, and passed into the hands of a *bona fide* holder, they must as to such holder be regarded as issued and negotiated within the meaning of the act; and that the payment thereof could not be disputed on the grounds set forth. The following opinion was rendered at the decision of the case.

GHOLSON, J.—Upon the issues of fact joined between the parties in this case, we should certainly feel bound to decide, that the bonds held by the relator are invalid, but for the considerations, that he is a *bona fide* holder of those bonds, that they are regular on their face, and that the statute has provided, that such bonds, issued and negotiated by the commissioners, shall be deemed conclusive evidence of the regularity of everything required by this act to be done preliminary to the issuing and negotiation." We have no difficulty in finding that the relator is a *bona fide* holder, and that the bonds are regular on the face thereof. We also think that the bonds were issued and negotiated within the meaning of the statute. They were executed by the commissioners, and delivered to the agents of the Dayton and Michigan Railroad Company, to be put into circulation, and must, as to a future *bona fide* holder, be regarded as "issued and negotiated." This issue of the bonds and delivery to the agents of the company is shown by the record of the proceedings of the commissioners. In form, also, as shown by the proceedings of the directors of the railroad company and of the commissioners, there was a vote of the electors of the county and a location through the county of the railroad. This location was soon abandoned, and, we think, the evidence shows, was not made in good faith, and that the real object was to aid another railroad company. Such a purpose was in fraud of the law and illegal, but it does not appear on the face of the transaction, and there is no evidence that the relator had any notice of the fraud and illegality.

The question then as properly stated by the counsel for the defendants, is, whether they are estopped by the statute from showing, as against the relator, such fraud and illegality, to invalidate the bonds? It is argued with ingenuity and force, that the statute does not extend to the want of power, but only to irregularity in the precedent steps, that the steps requisite to confer the power to issue the bonds, must be substantially taken, and only irregularities in taking them are to be overlooked in favor of a *bona fide* holder. The distinction between a want of power, and irregularity in the exercise of power, was recognized in the decision on the demurrer in this case (11 Ohio, S. R. 192). When a particular matter is to be regarded a condition precedent to the exercise of a statutory power conferred on such a body as the county commissioners, will depend on the construction of the statute. That which might otherwise be regarded a conditon, may, in view of the evident object and intent, and to give proper effect to the language employed, be placed on the footing of an irregularity, or what would amount to the same thing, it may be apparent, that those who have to act, are authorized to decide by their action that they have the authority to act.

In taking the steps required by the acts of the General Assembly to precede the issue and negotiation of the bonds, such as the votes of the electors on the question of subscription to the stock of the railroad company, and the location of the railroad in or through the county, it might become a question of some nicety, to draw the line between what would be substantial and what irregular. We cannot think, that such a distinction was in view of the Legislature. The object was clear; it was to facilitate the negotiation of the bonds and add to their market value. It was doubtless expected, that they would be used in places, where an inquiry into the mode in which the steps required had been taken, would be inconvenient, and the object was to render any such inquiry unnecessary. If the protection to a *bona fide* holder were extended only to what might be regarded as irregularities, in view of that distinction, it is doubtful whether any effect would be given to the enactment of the legislature—whether it would not amount to a mere superfluous declaration of what would be the rule of law on the subject. For it would be difficult to maintain, if the special provision as the effect of bonds regular on their face were stricken from the act, that a *bona fide* holder of the bonds would be affected by mere irregularities in the taking of the precedent steps, or in the exercise of power by the commissioners. The extreme case of an issue of bonds without an attempt to take the precedent steps was not contemplated, and we have not to deal with such a case. The steps required were ostensibly and professedly taken; the bonds were issued and negotiated by the commissioners; are regular on their face; and the relator is a *bona fide* holder; and in our opinion, a fair construction of the statute requires us to hold, that he was not bound to inquire whether there was any defect in the precedent steps, and that his title to the bonds cannot be invalidated by showing a defect, whether proceeding from intention or neglect.

The acts of the General Assembly under consideration were enacted before the adoption of the present constitution, and, as has been frequently held, are not inconsistent with it; and we cannot appreciate the argument, that the provision in that constitution against the loan of a credit of a county, gives to the illegal acts of the commissioners, and the railroad company an effect, as against a *bona fide* holder of the bonds which they would not otherwise have. A misappropriation of the proceeds of the bonds, by a secret arrangement between the commissioners and the Dayton and Michigan Railroad Company would be none the less illegal and a fraud on the law under which they were acting, because it contravened the spirit of a provision of the present constitution; but we cannot understand how it would be any more so, or that the degree of illegality could make any difference. After all, it can only amount to this, that the precedent steps required were taken, the bonds regular in form, were issued and placed in the hands of the railroad company to be put into circulation, all in seeming compliance with the acts of the General Assembly, but there was a secret understanding between the commissioners and the railroad company, that the bonds and their proceeds should be diverted from the purpose for which they were authorized to be

issued and applied to another. If the secret understanding to misappropriate cannot properly affect the rights of a *bona fide* holder, and we think that neither, on principle nor in justice, nor on a fair construction of the statute, ought to be affected thereby; then, surely, the object of the misappropriation, whether for individual benefit, for another work of internal improvement, or for an unauthorized purpose can make no difference.

It is to be regretted that those acting under such authority, as that vested in the present instance, do not keep themselves within its limits, and exceed them either from design or from a want of a proper apprehension of the law. But we are satisfied that it was the intention of the Legislature, by a particular and special provision of the statute, to protect a *bona fide* holder of the bonds, issued under the authority of the county, from the ordinary consequences of such illegal acts, and the issues will therefore be found for the State, and a peremptory mandamus will be awarded.

Ohio and Mississippi Railroad.

The gross earnings of this road for the fiscal year ending April 30, 1862, were....$829,932 38
And the expenses were.... .... 710,900 11

Net earnings.... ....$119,032 27

The passenger business shows a falling off of $157,497 03, and the freight business an increase of $89,412 36, as compared with the previous year.

The following statement will show the earnings of the road monthly for the past and preceding year:

	1861-'62.	1860-'61.	Decrease.
May	$56,951 25	$73,464 91	$16,513 66
June	47,245 46	77,590 83	20,345 37
July	46,427 81	73,267 54	26,839 73
August	65,396 85	96,707 58	28,310 73
September	81,409 05	97,456 09	16,047 04
October	70,313 18	98,943 63	28,630 45
November	66,859 59	76,495 59	9,636 00
December	75,450 35	55,945 85	*19,504 50
January	68,101 39	57,831 62	*10,269 77
February	65,280 38	60,794 45	*4,485 93
March	84,119 84	78,503 75	*5,616 09
April	102,377 23	64,815 89	*37,561 34
Total	$829,932, 38	$898,817 73	$146,322 98
Less increase			*77,437 63
Decrease for the year			$68,885 35

* Increase.

The earnings in April, 1862, include military tickets due from Government, amounting to $18,136 15, for transportation of troops from August, 1861, to March, 1862, inclusive which could not be included in the monthly earnings until paid by government, which was done in April.

During the year $30,033 65 were expended for construction—the principal portion of which was for 25 new platform cars, and for ballasting roadbed.

There were also expended in the re-construction of bridges, $49,137 99.

The number of passengers carried eastward was 86,429; westward, 97,289—total, 183,718. Number carried one mile, 11,862,496. Tons of freight carried eastward, 80,665; westward, 45,817—total, 126,482. Number of tons carried one mile, 18,407,541.

The earnings from freight for the year were $135,768 21. Rate per ton per mile, 2.2 cents.

The liabilities and assets of the Company on the 30th of April were:

LIABILITIES.

The Relative Strength of the North and South, and the Necessary Result of the Contest.

In discussing the question of the great rebellion, which has such an intimate connection with all financial topics, we have assumed that success, in the end, must incline on the side of the party possessing the greatest resources in men and money—the combatants being of the same race. The assumption is still correct, though the supremacy of the North has not been so rapidly restored, as we were led to believe. This has not been because the North has not put forth its superior power, but because this power has been misdirected and frittered away by those whose duty it was to wield it with resistless force.

The most striking thing, in fact, in the whole contest is the contrast between the financial strength, patriotism and martial spirit of the people, and the incompetency, imbecility and lack of purpose of the government. This difference is natural, and perhaps inevitable in all free governments. Our own has fostered freedom of individual action in the highest degree. The unrepressed energy of our people has not only wrought out material results that no others can show, but has imparted a confidence in their invincibility, and ability to overcome all obstacles that can be opposed to them. No work too arduous can be proposed, and no question in politics which they do not feel it their destiny to solve. In the North the most perfect unity of purpose and sympathy exists, so that the whole strength of the people can be almost instantly utilized and directed to a common end. The Northern States are divided, probably, into 20,000 distinct municipal or political organizations. A call for 300,000 men, which is only 15 from each, is filled for the whole in very nearly the same time that it could be for one; and although time is required in collecting and massing the volunteers, hardly a day is required to procure their enlistment. The spirit of the people is raised to a pitch, that every able-bodied man in the country can be had, if need be, to put down the rebellion. In the small subdivision of towns and villages public opinion naturally points out the persons best fitted, under all circumstances, to go. These readily respond to the call. Those that remain equalize the burden by contributing most liberally to the volunteers, and in making provisions for their families. In this way the whole resources and power of the nation are brought directly to bear, and with an efficiency and completeness which no nation, however despotic its government, can show. A few weeks only are required to raise, arm and equip 300,000 men, of the best pos-ible material for soldiers—intelligent; thoroughly trained in to labor, and most of them in the field; healthy and strong; with a full appreciation of the nature of the contest in which they are engaged, and eager to be led to battle.

Very nearly a million of men have been raised and 300,000 more have been called for, and who will soon be under arms. Yet little progress has been made in accomplishing the object for which they have been called out. The government has everything it asks—men, money, munitions of war, zeal on the part of the soldiers, and subordinate officers, and entire devotion to the cause. Yet it accomplishes nothing in proportion to its means. A palsy rests upon everything about Washington. The strength and power of a great nation is wasted by its rulers, who are fickle, irresolute and purposeless, without adequate capacity for the present, or policy for the future. The people pour into the mælstrom at Washington countless hords of men, with countless millions of money, with everything that can give efficiency to armies, all of which almost instantly disappear from use and sight, while the call is incessant for more. Each call is more than answered, but with the same result. In fact nothing can exceed the capacity and zeal of the people, but the incapacity and indifference of the government.

But all this striking and startling picture is not an unnatural one—on the contrary, it is the necessary result of previous conditions. It could not be otherwise. Neither does it, in the end, controvert the premise that success must finally incline to the strongest party. We must wait and suffer till the state of things that have produced our disasters has cured them. Our people are the richest, strongest, most powerful and intelligent of any, because they have been the freest. Freedom has trained labor to be more productive here than in any other country; has given a greater emphasis to the character of our people; has brought them in closer sympathy and fused them more perfectly into one common mass. In all this the Federal Government has had but little

share or function. Whatever has been valuable in legislation, affecting immediately the interests of the people, has come from State, rather than the General Government. The people have had no relations to the latter. They look to State Legislatures for the privilege of constructing public works, for the support of educational and religious institutions, and in fact for every help and appliance that legislation can extend in aid of individual effort. The Federal Government having but few useful functions, those who wielded it gradually became more and more estranged from all obligations to consider and protect the public welfare. Its offices and emoluments were regarded simply as the rewards for its partisans, and power was sought, not for any ennobling object, but simply for the money and influence it would bring. For a generation we can hardly point out a single great purpose that has engaged its attention, or that has calculated to leaven the corruption and selfishness almost always incident to an official position. As far as the interests of the people are concerned, our National Government has been one without functions or duties. It is not strange, consequently, that when an extraordinary emergency arose, it found itself utterly incapable of meeting it. It will not be met till the emergency has educated the Government to its new functions which may be entirely opposed to those which have existed by prescriptive right, or which are sanctioned by tradition. It is so with all governments. The experience of that of Great Britain is full of instruction for our own. In all the great crises through which that country passed, it floundered for years in the trough of incompetency and indifference. The crisis found the possessors of office and power, either careless of the public welfare, blind to the course of events, or intent only upon the gratification of their own selfish objects. In their creed, the government existed for their good alone. But defeat and disaster in good time infused into the rulers energy and a proper appreciation of their duties, till under the new regime their efforts were crowned with entire success. So will it be with ourselves. It is hard to suffer and wait, but there is no other solution when governments are caught in an extraordinary crisis. They never appreciate it or understand it in the outset, but go groping on in the old way, seeking quiet as the thing more than all others to be desired, shoving off responsibilities and looking upon loss of place as the greatest evil that can befall. We must not expect exemption from the universal lot. On the contrary, our case has been aggravated by the very freedom of our institutions. In other countries, governments being in direct antagonism to the people, are always on the alert, organized, prompt to strike, and rapid in execution.

In this country the government is the people. There is no marked line between the two. The former will not accept the fact that such antagonism can exist. To assume such antagonism is loss of place, and what is most dear in life. It is such a sentiment that has stayed the arms of our government, and still withholds all efficient blows. The President will not forget the paternal relation he sustains. In contrast to all this, the institution of slavery has given the people of the South the habit of command. Every planter's will is the law on his domain, and summary punishment is dealt to every offense. Hence the energy on one side, and the incertitude and lethargy on the other. But this lethargy is already giving way to activity—the indifference that has prevailed to a definite policy. The evils which have entailed upon us our defeats are correcting themselves, and it will not be long before the results will be in ratio to the relative resources of the two sections; and as these are overwhelmingly in favor of the North, the reassertion of its power and authority is as inevitable and unerring as any natural law. When both parties move with equal energy the contest is virtually ended.—*Hallett's Financial Circular.*

Railroad Earnings--Monthly.

The business of the Illinois Central Railroad for August, 1862, was:

Land Department.

Acres Construction Lands sold	2,397.15	for	$29,811 71
Acres Interest Fund L'ds sold	475.05	"	3,990 50

Due for current expenditures in June and prior		213,208 97
Balance to credit of income account		78,859 46
		$17,039,136 51

All the above bonds bear interest at the rate of 7 per cent. per annum, with the exception of the Chicago Depot bonds, of which $39,420 are at 8, and the remainder at 6 per cent. interest.

The Erie Railway Company.

AN ACT concerning the Erie Railway Company. Passed March 28, 1862—three-fifths being present.

The People of the State of New York, represented in Senate and Assembly, do enact as follows:

SECTION 1. The Erie Railway Company, having been duly organized pursuant to the provisions of the act entitled "An act relative to the foreclosure and sale of the New York and Erie Railroad," passed April fourth, eighteen hundred and sixty, and of the act in addition thereto, passed April second, eighteen hundred and sixty-one, and Dudley S. Gregory and J. C. Bancroft Davis, the trustees named in the contract or amicable agreement referred to in said acts, having duly conveyed to the said company all the estate, property, franchises, rights and other things which were purchased by them, pursuant to the provisions of said first named act, and were conveyed to them pursuant to the conditions of sale, and of the several acts and proceedings relative thereto, so as to vest the same in the said Erie railway company, their successors and assigns, and some of the unsecured bonds of the New York and Erie railroad company being still outstanding, it is hereby enacted that any holder of an unsecured bond or bonds of the said New York and Erie railroad company, or of coupons on such bonds which matured before January first, eighteen hundred and sixty-two, or of a judgment debt recovered against said company before the said sale, who shall, before the first day of July next, surrender his said bond or bonds or coupons to the Erie railway company, or discharge said debt, shall be entitled to receive preferred stock therefor in the Erie railway company, upon payment of an assessment of two and one-half per centum on the par value thereof, with interest from the first day of September last, the same as if the surrender had been made pursuant to the provisions of said amicable agreement. And any holder of the stock of the New York and Erie railroad company who shall surrender the certificate of his said stock to the Erie railway company before the said first day of July, and pay a like assessment thereon, shall be entitled to receive the common stock of said Erie railway company, the same as if the surrender had been made pursuant to the provisions of said amicable agreement.

§ 2. The said Erie railway company shall, after the first day of July next, file in the office of the Secretary of State a statement of the whole amount of the stock of said Erie railway company, both common and preferred, outstanding and issued on that day; and certified copies of said statements, and of the articles of association of said Erie railway company, shall be prima facie evidence of the organization of said corporation, and of the facts contained in said articles, and in said statements, in all proceedings to which the said Erie railway company is or may be a party.

§ 3. The aforesaid purchase of the New York and Erie railroad, and other property sold at the sale, having been made by said Dudley S. Gregory and John C. Bancroft Davis, subject to the rights and interests of the several classes of mortgage bondholders of the New York and Erie railroad company, and of the trustees under the said several mortgages, as the same existed at the time of the sale, in and to the personal property and chattels covered and intended to be covered by said mortgages, the said rights and interests shall continue and be preserved as against all persons and corporations; and it shall not be necessary hereafter to file the said mortgages, or any of them, as chattel mortgages, in order to preserve the liens created by them as they existed at the time of said sale.

§ 4. The Buffalo branch of the Erie railway company, a corporation organized under the provisions of the laws of this State, is authorized to consolidate with the Erie railway company into a single corporation, under the said corporate name of the Erie railway company, provided that the capital stock of the said Erie railway company shall not be increased by such consolidation.

§ 5. Such consolidation may be made by an agreement under the respective corporate seals of the two corporations; and upon filing a duplicate or counterpart thereof in the office of the Secretary of State, the said corporation, known as the Buffalo branch of the Erie railway company, shall be merged in the said Erie railway company, and all and singular the rights, franchises and interests of the said Buffalo branch of the Erie railway company, in and to every species of property, real, personal and mixed, and things in action thereunto belonging, shall be deemed to be transferred to and vested in said Erie railway company without any other deed or transfer; and the said Erie railway company shall hold and enjoy the same, together with the rights of way and all other rights of property, franchises and interests, as fully as if the same had been lawfully acquired or constructed by the said Erie railway company; provided, however, that the said Erie railway company shall, when such consolidation takes place, assume all the obligations and liabilities of the said Buffalo branch of the Erie railway company, whether on contract or for misconduct or neglect, and whether to this State or to individuals, and shall be liable to have an action brought against it to enforce the same, and may be made a party to any suit now pending to enforce any such obligation or liability.

§ 6. The Erie railway company shall hereafter, in addition to the returns which it is now required by law to make, return to the Secretary of State, with the other funded debt of the company, the amount of the sums on the thirtieth day of September in each year, required to be paid annually for the leases of the Long Dock property, of the Union railroad, of the Paterson and Ramapo railroad, and the Paterson and Hudson River railroad operated by the Erie railway company, in New Jersey, and of such other railroads as are now or hereafter may be operated by said Erie railway company under a lease, whether in this State or elsewhere; and on failure to make any such return for twelve months, after being required to do so by the Secretary of State, the right to continue such leases or any of them may be determined on information filed in the Supreme Court by the Attorney General. But no willful failure to make such return shall operate to relieve such Erie railway company from its obligations to pay any moneys stipulated in and by such lease to be paid it. And if any corporation duly organized, or to be organized, in the State of New Jersey or Pennsylvania shall undertake to construct a coal road and to connect the same with the road of the Erie railway company, between Oxford Station in Orange county and Deposit in the county of Delaware, for the transportation of coal, said Erie railway company is hereby authorized to lease the said coal road and to contract for the leasing and operation of the same, and for the transportation of coal over said road and upon any road that may be owned or operated by said Erie railway company. Provided, however, that this section shall not be deemed to authorize the leasing of but one such road.

§ 7. Chapter one hundred and sixty of the laws of eighteen hundred and sixty, and chapter one hundred and nineteen of the laws of eighteen hundred and sixty one, relating to the re-organization of the New York and Erie railroad company, and conferring on the Erie railway company the franchises, rights and authorities theretofore belonging to the New York and Erie railroad company, are hereby declared to confer upon the Erie railway company, in regard to any railroad, it may now operate including the continuation of their line from Attica to Buffalo and from Corning to Buffalo, all the authority conferred on certain railroad companies by chapter three hundred and two of the act of eighteen hundred and fifty-five.

§ 8. This act shall take effect immediately.

FEDERAL, STATE, COUNTY, AND CITY SECURITIES.

American Railroad Journal.

Saturday, September 13, 1863.

Opening of the Raritan and Delaware Bay Railroad.

The Raritan and Delaware Bay Railroad has at last been opened to the public from Port Monmouth to Atsion, on the line of the Camden and Atlantic, a distance of 63 miles. The distance between Atsion and Camden is 28 miles, making the entire length by railroad 91 miles. It is only a few weeks since the Chancellor of New Jersey refused to issue an injunction against the completion of the new road, on the application of the Camden and Amboy Company. That officer based his decision on the ground that it did not as yet enter into competition with the latter line in carrying through passengers and freight between the cities of New York and Philadelphia. In accordance with this decision we take it for granted that trains will run only to the point of connection, making a change of cars necessary. This loss of time, together with the additional twenty miles to be travelled, will enable the C. & A. Company to maintain its present business and position without difficulty.

The road traverses the counties of Monmouth, Ocean, Burlington and part of Camden. Its general course is South by West, running about midway between the Ocean and the Delaware river. A portion of the country through which it passes, has hitherto been one of the most unforbidding regions in the United States, lying far from all the great lines of travel by land or water. But we are assured that the deposits of marl which have done so much towards making Monmouth Co. the garden of the State, are still to be found in immense quantities further southward. The work of clearing away the forest may, consequently, be expected to go on until that section takes its place among the most advanced in New Jersey.

Running through a country with few hills, and no mountains or large rivers, the road has been built at a very moderate outlay. Up to the present time this has amounted to only about $20,000 per mile; but an additional $2,000 or $3,000 per mile will be required to put up the buildings needed, a line of telegraph and some other improvements. The rail used is the improved Erie pattern weighing 60 lbs. to the yard. The track is smooth, and everything about the road is substantially done as far as finished. Some more engines and rolling stock will shortly be required.

It is now about seven years since the charter was obtained. The usual difficulty, want of adequate means, retarded operations; and it was not until February, 1860, that the section from Port Monmouth to Red Bank was opened. Last Summer the line was completed to Bergen Iron Works. It is in contemplation to extend the road through South Jersey to Cape May, so as to form a link in the great New York and Norfolk through line.

Stock and Money Market.

During the past week there has been a good degree of steadiness in the Stock and Money Market, with a manifest improvement on the whole. The conviction has become common that the nearer approach of the Confederates does not portend danger to the Nation so much as it shows their condition to be growing desperate, compelling them to resort to a remedy which would not have been ventured upon a year ago.

In our last issue we referred to the decline in prices which took place on Wednesday. On Thursday there was a decided improvement, gold sinking to 117⅝. On Friday and Saturday it again rose until it touched 119¼. During the present week, up to Wednesday P. M., there has been a general improvement. The rate is now 118½ to 118⅝, with moderate sales.

Exchange on London ranges from 130 to 131, about the same as last week. There may be a further stiffening in exchange as compared with gold, owing to the probable excess of imports over exports for a season. Last week the former amounted to nearly five and a-half millions of dollars, in round numbers, at this port only,

against $2,823,000 of exports. About three-quarters of a million in specie have gone to Europe during the past week, including the sum taken by the *Persia* to-day.

The new "post office" currency has finally made its appearance; but the supply is as yet by no means equal to the demand. This will have the effect of enabling people to dispense with the use of silver in making change; though in principle it is liable to the same objection made against all government paper circulating as currency. Some persons predict that since American silver coin is at a discount of about 5 per cent. as compared with gold, the effect of this new currency will be to bring back the silver into circulation, seeing it is too bulky to board in our banks and will not liquidate foreign debts at its nominal value. More unlikely events have happened than this. The rate for money continues easy, though a shade less so than two weeks ago. In general, first-class business paper varies from 4½ to 5 per cent.; few transactions being made below the former rate.

Government securities have on the whole improved during the week. To-day the Sixes of 1881 are from par to 100⅛. For the Registered par was asked, and 99¾ offered. Sales of the Oregon War Loan have been made at 97¾ for the half-yearly, and of Coupon Fives of 1874 from 88¼ to 88½. The 7.30 Notes have advanced to 103¼, and Certificates of Indebtedness to 98¼. These show an improvement of from one-half to one per cent. on the prices of this day week.

In State stocks the transactions have been limited with a slightly upward tendency the last three days. At the Second Board to-day Missouri Sixes changed hands at 46¼ to 46⅛; California Sevens, at 99½ to 100. Tennessees are quoted at 49 to 50 without sales. For Virginias 55⅛, and for North Carolinas 63¼ were bid.

Railroad securities have participated somewhat in the general movements of the week. Since the Second Board to-day sales of New York Central stock have been made at 94¼; of Erie (Common) from 37⅞ to 38; do. (Preferred) 69 to 69¼; Illinois Central, at 63¼; Cleveland & Toledo, from 53¼ to 54; Rock Island from 67¼ to 67½. Railroad bonds have in general been firmer for the past few days, and prices show a rise as compared with last Wednesday. The reports of earnings for September are equally satisfactory with those of August and July. The Erie and Central are crowded with freight since the suspension of through business on the Baltimore and Ohio Railroad, and a further advance in rates is announced. The September business of the Illinois Central promises largely to exceed that of the same month last year.

The Eighth Census.

The following is a continuation of the preliminary chapters of the Census Report of 1860, now in course of preparation at Washington, under the direction of Jos. C. G. Kennedy, Esq.:

THE PUBLIC PRESS.

Among the elements which determine the characteristics of a people, no branch of social statistics occupies a more important place than that which exhibits the number, variety and diffusion of newspapers and other periodicals. Composing, as they do, a part of the reading of all, they furnish nearly the whole of the reading which the greater number, whether from inclination or necessity, permit themselves to enjoy, and it was in virtue of this that the most philosophical of British statesmen signalized "newspaper circulations" as a more important instrument of the popular intelligence than was generally imagined in his day. The writers of these papers, he added, "are indeed, for the greater part, either unknown or in contempt, but they are like a battery in which the stroke of any one ball produces no effect, but the amount of continued repetition is decisive. Let us only suffer any person to tell us his story, morning and evening, but for a twelvemonth, and he will become our master."

And if such was the idea of Burke respecting the influence of the public press, it is equally true that the quality and the dissemination of its fugitive sheets may be said to stand as an exponent at once of the intelligence and the domestic economy of any people.

It was in this view that Lord John Russell, in his great speech on Parliamentary reform, delivered in 1822, cited the multiplication and improvement to newspapers as gratifying evidences of the augmented wealth and expanding culture of the middle classes in Great Britain. And it was in this view, also, that a great Greek scholar was accustomed to say that a single newspaper published in the age of Pericles (had that age produced any such phenomenon) would, if handed down to us, be a better index of Athenian life and manners than can now be found in any existing memorials of the Grecian civilization.

The newspaper and periodical press, now covering so wide a field of activity in every department of thought, has won its way to the commanding position it occupies from very small beginnings. Taking its origin in Italy, and under a form bearing some resemblance to that of modern times, capable of being traced to the sixteenth century, the newspaper has in our day enlarged equally with the area of its diffusion and the character of its contents, while the celerity with which it is disseminated equalizes throughout large tracts of country the conditions of that popular intelligence which make up an enlightened public opinion. The earliest English newspaper, called the *Mercurie*, was little more than the present *Court Circular* in respect of its matter, while its periodical visits from London to York were, in the time of Cromwell, accomplished, "in the brief space of a fortnight or three weeks."

At the present day the newspaper and the periodical have become "popular educators."

Instead of mere chronicles of formal proceedings or passing events, they are vast depositories of discussion and information on all topics which engage the thoughts or enlist the activity of men in the figure of society. A free press has thus become the representative and, for the masses, the organ of that free speech which is found indispensable to the development of truth, either in the religious, the political, the literary or the scientific world. In each and all of these domains the newspaper and the periodical have accordingly become most efficient agents.

And in no country has their influence been more sensibly witnessed or more widely extended than in the United States. The universal diffusion of education, combining with the moderate prices at which the daily visits of the public press may be secured, has given to the newspaper a very great currency among us. And where so large a share of the popular activity is, from the very nature of our civil institutions, engrossed in social and political discussions, it is easy to predict that the public press must ever exert a power which renders it mighty for good or for evil, according to the intelligence and the virtue of those who preside over its conduct.

A NEWSPAPER READING NATION.

The tabular statement appended to this report, relating to this subject, strikingly illustrated the fact that the people of the United States are peculiarly "a newspaper reading nation," and serves to show how large a portion of their reading is political. Of 4,051 papers and periodicals published in the United States, at the date of the census of 1860, 3,242, or 80.02 per cent were political in their character; 208, or 7.38 per cent are devoted to literature. Religion and theology compose the province of 277, or, 6.83 per cent while 234, or 5.77 per cent are classed as miscellaneous.

INCREASE IN NEWSPAPERS AND PERIODICALS.

The last decade in our civil history has been one of extraordinary political agitation. Accordingly we find that there has been a very large increase in the number of politica papers and periodicals as compared with corresponding publications at the date of the preceding census. In 1850 their number was 1,630. In 1860 it was 3,242, being an increase of nearly 100 per cent. In 1850 the number of religions papers and periodicals was 191. In 1860 it was stated at 277, being an increase of 45 per cent. In 1850 the number of papers and periodicals of every class in the United States was 2,526. In 1860 the aggregate under this head reaches, as before stated, 4,051, showing a rate of increase of 60.37. The total circulation of all kinds amounted in 1850 to 426,409,978 copies. In 1860 the annual circulation is stated at 927,951,548 copies, showing a ratio of increase of 117.61.

The total white population of the United States was stated at the date of the census of 1850 to be 19,553,114. In 1860 the census returns report it at 27,008,081, the ratio of increase being 38.12. These figures show how largely the increment of the newspaper and periodical circulation has exceeded the increase of population during the last ten years.

In 1850 the annual circulation of all kinds afforded 21.81 copies to each white person in the Union. In 1860 the total circulation was at the rate of 34.36 per person. New Hampshire and North Carolina are the only States which, as compared with the date of 1850, show any considerable decline in the number of copies of papers and periodicals published within their limits. In the States of Maryland and Vermont, and in the District of Columbia, the emissions of the public press at the two dates are nearly uniform. The largest increase, as might have been expected, occurs in the State of California. Of the total circulation in the country, three States, New York, Pennsylvania and Massachusetts, furnish 539,026,124 copies, or considerably more than half of the aggregate amount.

PRINTING PRESSES.

The increase of printing presses in the book and newspaper manufacture has been great beyond all precedent, and has exerted the most beneficient influence by cheapening and multiplying the vehicles of instruction. Its effects are everywhere apparent. Never did an army before possess so much of cultivated intellect, or demand such contributions for its mental food, as that now marshalled in its country's defence. Many of these reading soldiers ripened their intellectual tastes during the last ten years. In fact, many divisions of our army carry the printing press and type, and the soldiers issue publications and print the forms for official papers. The press is, indeed, the great prompter of enterprise. It constantly travels with the emigrant to diffuse light and intelligence from our remotest frontiers, where it speedily calls into existence the paper mill and all the accessories which it supports in older communities.

BOOK, JOB AND NEWSPAPER PRINTING.

In New England, the Middle and Western States, the value of book, job and newspaper printing is returned as $38,428,043, of which eleven millions worth consisted of books; the value of the latter being nearly equal to the whole product of the same branch in 1850, which was returned at $11,586,549. The manufacture of paper, especially printing paper, has increased in an equal ratio, the State of Massachusetts alone producing paper of the value of $5,968,469, being over fifty-eight per cent of the product of the Union in 1850. New York returned paper of the value of $3,516,276; Connecticut, $2,528,758, and Pennsylvania, $1,785,900.

☞ The Chemung Railroad Company has declared a quarterly dividend of two per cent., payable on demand at 237 Broadway.

Cotton Waste.

This article, so necessary to railroad and steamboat men, can be had, in any desired quantity, of Messrs. K. Egan & Son, No. 19 Burling Slip. This firm keep also one of the largest stocks of materials used in the manufacture of paper to be found in the country. We may observe here that recent events, by raising the prices of cotton, have led to its being replaced largely in the manufacture of the better qualities of paper by *hemp* Rags, which are scarce and therefore costly, are going more and more out of use.

Pacific Railroad Convention at Chicago.

The assembling of the Pacific Railroad Convention at Chicago, on the 2d inst., was the occasion of drawing to that city a large number of leading citizens, not only to witness the deliberations, but also to lend their countenances to an enterprise in which the whole country, especially the great West, is vitally interested. The visitors upon this occasion comprised public men of every description—prominent politicians, railroad men, bankers, telegraph men, distinguished military leaders, &c. The citizens of Chicago also regarded the event as one of unusual importance. Among the principal men in attendance were the following: General Curtiss, Hon. Alfred Ely, Gen. Walbridge, Hon. Samuel B. Ruggles, Hon. C. Vibbard, Gov. Dennison, of Ohio; Senator McDougal, of California; Gov. Fairbanks, of Vermont, &c., &c.

first day's proceedings.

The Convention met at 12 o'clock on Tuesday, the 2d instant, and organized temporarily by calling Gen. Samuel R. Curtiss, of Iowa, to the Chair. Gen. C., made a brief address, setting forth the objects of the Convention, and the importance of the enterprise they were about to inaugurate.

The Commissioners had been selected to put in practical form and actual operation an enterprise which had, more or less engaged the attention of the country for the last quarter of a century. Hitherto there had been put forth in connection with this road large ideas, which were impracticable, and consequently, never secured that confidence which is necessary to success. But now we have an act of incorporation, which has received the approbation of the most distinguished practical minds in the country. And we have now assembled to take the initiatory steps to adopt the measures and pursue the plans which are to give to our people a highway to the Pacific.

The distance between the connecting points at the East and the West has now been reduced to 1,500 or 1,600 miles, requiring the construction of a less number of miles of railroad than were built in Illinois in two years.

To all who are interested in the great lines of railroad terminating at or beyond the Mississippi, he would say, you will find the branches proposed in the bill, embracing all your roads, bringing you directly upon the great trunk line. There are to be three or four of these branches, but they are in no way to interfere with the trunk, except to be feeders to it from the lines, which, having their starting point on the sea-board, now reach nearly to the confines of the settled portion of the country, on the Western frontier.

Of the importance of this great national work, he scarcely need speak. It would connect the Pacific States with those of the great Valley, and of the Atlantic, forming the link which will make us emphatically one people.

The provisions of the bill under which we are about to act, have fortunately secured the co operation of all the great railroad interests of the county. This is auspicious, and a guarantee of ultimate success.

Gen. C. briefly sketched the history of the past efforts to secure the construction of a Pacific railroad, and the principal causes of their failure.

In concluding he said that he wished no position in the organization. All he wished, was a guarantee of success. Let the important posts be filled with men of purity of motive—national views and unity of aim—such men as will commend the enterprise to the capital of the country. The bill was more liberal than the one he had introduced into Congress. It granted more land, more bonds. But after all, we must rely upon an honest and faithful administration of the trust, to insure the success of the enterprise. When completed, those who have been instrumental in carrying forward this great work to its final consummation, will merit and will receive a higher place in the niche of fame than any others on this continent. This time of disaster and difficulty may be deemed inauspicious to the entering upon an enterprise of this magnitude. But these disasters do not interfere with its elements of success, or materially derange its sources of income—the trade and travel of necessity will be compelled to take this route from ocean to ocean, and the intermediate and otherwise almost inaccessible points.

Robert Finney, of Pennsylvania, and John R. Robinson, of California, were appointed tempoaary secretaries. The roll was called, and the following Commissioners answered to their names.

Maine—James Dunning, John M. Wood, Joseph Eaton.
New Hampshire—Joseph A. Gilmore.
Massachusetts—Edward R. Tinker.
Rhode Island—Chas. Fosdick Fletcher.
Connecticut—Cornelius S. Bushnell.
New Jersey—Ephraim Marsh, Charles M. Harker.
New York—Royal Phelps, Wm. H. Ferry, Samuel E. Campbell, Alfred E. Tilton, John S. Kennedy, H. Carver, Joseph Field, Benj. F. Camp, Orville W. Childs, D. N. Barney, S. DeWitt Bloodgood, Wm. H. Grant, Thos. W. Olcott, Samuel B. Ruggles, Jas. B. Wilson.
Pennsylvania—Joseph H. Scranton, Geo. W. Cass, Daniel J. Morell, Robert Finney, John A. Green, E. R. Myre.
Ohio—Amasa Stone, Wm Dennison.
Indiana—Chas. Paine, Jonas Votaw, Jesse D. Williams, Isaac C. Elston.
Illinois—Wm. B. Ogden, Chas. G. Hammond, Henry Farnum.
Michigan—John D. Campbell, Chas. A. Trowbridge, Ransom Gardner, Chas. T. Gorham, Willard McConnell.
Wisconsin—John Catlin, Levi Sterling, George Thompson, Elihu L. Phillips.
Minnesota—David Blakely.
Iowa—Wm. F. Coolbaugh, Lucius H. Langworthy, Hoyt Sherman, Lyman Cook, Samuel R. Curtis, Lewis A. Thomas, Platt Smith.
Missouri—William M. McPherson, Armstrong Beaty, John Corby.
Kansas—J. C. Stone, John Kerr, Werter R. Davis, Josiah Miller.
Nebraska—Gilbert C. Monell, Augustus Kountz, T. M. Marquette, Alvin Saunders.
Colorado—John Evans.
California—James T. Ryan, D. O. Mills, John R. Robinson.
Appointed by the Secretary of the Interior—Samuel J. Tilden, and H. V. Poor, of New York; R. W. Latham, District of Columbia; O. M. Wozencraft, of California.

The absentees were then called, when, after some discussion, an adjournment took place to 5 o'clock, for the purpose of effecting a permanent organization.

afternoon session.

The Convention reassembled at 5 o'clock P. M. The motion for the election of permanent officers, which was pending at the close of the morning session, was taken up.

G. W. Cass, of Pennsylvania, offered the following resolution:

Resolved, That this Convention do now proceed to a permanent organization, and that nominations be made for President.

This being amended so as to require a majority vote in order to elect, was, after some discussion, adopted.

Hon. Wm. B. Ogden, of Chicago, and G. W. Cass, of Pennsylvania, were put in nomination for President.

Mr. Cass having peremptorily declined, Mr. Ogden was chosen by acclamation.

Mr. Cass and Mr. McPherson, of Missouri, were appointed to conduct the President to the Chair. On taking his seat, Mr. Ogden was greeted with hearty cheering, which having subsided, he proceeded to briefly address the Convention.

He acknowledged heartily the honor conferred in calling him to preside over the Convention which has met to consider one of the most momentous questions of this or any other age. He should endeavor to discharge the duties so as to bring about the results so important to the interests, permanence and union of our country.

The difficulties which surround the project are but momentary. It must be carried through by wise consideration and a patriotic course of policy, which will inspire the capitalists of the country with confidence. A speculative spirit is as fatal to it as secession to our political union. Whoever attempts to speculate should be frowned down as an enemy to the project.

The bill is substantially well drawn, with a good foundation, but there are nevertheless defects. It will need to be amended, and some of the clauses which are not sufficiently well defined, will require to be changed. Congress will doubtless listen to experienced practical men, and make such amendments as this Convention shall recommend—and he would suggest and lay before the Convention some of the alterations which, in his judgment, ought to be made. This meeting should adopt these amendments, in order to make it a successful bill, and should sign a petition that we will take stock if they are adopted. If we go before Congress with two or three hundred prominent names, they will command attention.

He would suggest the following:

First—The bill gives no power to condemn property. It was the first conception that the road went through Government lands, which led to this omission. This should be remedied.

Second—There is no provision giving the right to mortgage the lands. You may wish to raise a few millions by mortgage, but there is no provision to that effect.

Third—There should be an amendment providing for a further extension of time in carrying out the details of the road.

Fourth—The twenty-five per cent. reservation on the bonds issued for the construction of the

roads over the Plains, undoubtedly made for fear the money would be stolen, should be remedied by placing it in the hands of men of high character, and then the reserved rights would be granted.

Fifth—It is a radical error in the bill that Government has reserved the right of giving preference to their business, telegraphic, postal, and the transportation of troops. Suppose we should be involved in a continental war, and the road should be occupied for a year or two exclusively for war transportation, where is your money to pay employees, and to devote to repairs and other expenses? Government should either pay for this right, or else should be limited in the work it does. That provision should be reconsidered.

Sixth.—The Government has the right to the profit on these bonds, due thirty years hence, after the principal and interest are paid. It is the public opinion that these bonds will pay in thirty years. If this road is put into that highly respectable relation it deserves, Congress will undoubtedly waive that claim. When we build roads in the West, we go to the East for customers, from whom we may raise money upon our first mortgage bonds, which are first liens upon the property. Government is building this road for its own purposes, and asks us to add our money to that of the Government, to complete the road and run it for them. It is not the policy of Government to guarantee the stock of the road, but it is right and proper that when Government asks subscriptions for its own purposes, we should have seven per cent., and the balance go to Government. After the railroad is once started, forty or fifty millions more than Government allows, will be needed to keep it going. The work is not more than half done, when you set it running. After the details are worked out the earnings begin to come in. I asked Mr. Thomson, of the Pennsylvania road, why he built that immense hotel on the top of the Alleghanies. He replied that he was afraid that two or three trains might get stalled in the Winter, and the passengers starve or freeze. But not a single train had been stalled since the erection of his hotel. No doubt troubles and many obstacles will be found in the Rocky Mountains and the Sierra Nevada, but they can probably be overcome.

With the aid of this further contribution, and a perfect charter of this kind, with the allotment of seven per cent. of the earnings to the stockholders after Government has started the road, capitalists will be more than willing to take hold of it.

It seems to me that these amendments comprise the most essential points, and I think there is little doubt that when you act as a whole and suggest them to Congress, they will make still further provisions. So far as the National point of view is concerned, the States west of the mountains have made complaints of the Eastern States, for withholding their means and not making connection with them. I have feared this feeling might lead to an estrangement, almost fatal in its consequences. The indifference of the eastern side of the mountains, if continued, will cause them to take their fortunes into their own hands and leave us alone. This is a vital matter, and we must assure them that we will make them and ourselves immediate neighbors.

The importance of the road, when constructed, as the great highway of nations, as well as a connecting chain between the Atlantic and Pacific States, cannot be overestimated. Lines of steamships will be established in connection with it—traversing the Pacific Ocean in every direction, and making tributary to it the rich commerce of the far East. It will bring the Oriental ports within thirty days of New York. The difference between this and a nine months' voyage around the Cape is apparent, at least to every merchant. Forty days will suffice for the transit from India to England. The route must command the travel and a large portion of the trade between Europe and the East. This will be in addition to the immense home business which, as a necessity, must be done upon this road.

The road will be without a competitor, with regular rates of tariff, and can easily earn enough to make the investment a profitable one. It can be easily built, and will cost much less than many Eastern roads, per mile. In the meantime, if we can procure these amendments with the promise of heavy subscriptions, the work we may reasonably anticipate, will go forward:

The Convention will now proceed to business:

H. V. Poor, of New York, was nominated for Secretary.

Mr. Gilmore made a motion to adjourn, to give those who were expected this evening an opportunity to participate in the organization.

B. F. Camp, of New York, and John R. Robinson, of California, were also nominated for Secretaries.

Mr. Tilden, of New York, moved that the Convention proceed to the election of Secretary—the vote to be taken, by calling the names of the Commissioners.

Gen. Curtiss made quite a long speech, mainly with reference to the amendments proposed by the President of the Convention in the opening address. He declared that there was no necessity of petitioning Congress for them. The Legislatures of the States would freely and promptly grant the right of way, Congress would grant an extension of the time for the completion of the road at any time for good reasons shown. Congress had made a most liberal grant, giving for the first 150, 6,400 acres of land, which at the lowest estimate is worth $4,000, and $12,000 in bonds, making $16,000 for each mile of road. This he considered enough to begin with, and that it would be impolitic to ask more. He thought it the best policy to perfect the organization under the bill as it stands.

A *viva voce* vote was taken for Secretary, with the following result.

H. V. Poor	51
B. F. Camp	10
J. R. Robinson	6

The election of Mr. Poor was then declared unanimous.

Thos. W. Olcott, of Albany, was elected Treasurer "by acclamation."

On motion of Mr. Bushnell, a Business Committee, constituted as follows, was chosen:

Maine, John M. Wood; New Hampshire, Joseph A. Gilmore; Massachusetts, Edward R. Tinker; Rhode Island, C. F. Fletcher; Connecticut, C. S. Bushnell; New Jersey, C. M. Harker; New York, S. B. Ruggles; Pennsylvania, G. W. Cass; Ohio, Amasa Stone; Indiana, Samuel Hanna; Illinois, Wm. B. Ogden; Michigan, C. T. Gorham; Wisconsin, J. Catlin; Minnesota, D. Blakely; Iowa, W. P. Coolbaugh; Missouri, J. Corby; Kansas, J. C. Stone; Nebraska, Oliver Saunders; Colorado, John Evans; California, D. O. Mills; At Large, S. J. Tilden.

Adjourned.

SECOND DAY'S PROCEEDINGS.

The Convention assembled at 10 o'clock on Wednesday morning, and 68 Commissioners answered to their names. After some unimportant business, explanations, &c., the joint resolutions of the Territorial Legislature of Colordo, asking that the road may be located through that territory, pledging the earnest co operation of the people in its construction, and recommending Gov. Evans as one of the Directors, was received and laid over for future consideration.

The Business Committee reported, in part, setting forth the importance of the Pacific Railroad in a National and commercial point of view; that the pressure of war should not discourage the friends of the work, nor deter them from entering vigorously upon its prosecution. They also recommend the early opening of subscription in all the principal cities of the Union.

The report was accepted and laid over for future consideration.

After the transaction of some routine business, the report of the Committee was taken up.

Hon. S. B. Ruggles, of New York, called upon Gov. Evans, of Colorado, for an exposition of the mineral resources of that region, and the effect of the Pacific Railroad in developing its resources, &c.

Gov. Evans addressed the Convention at some length, in response to the call, setting forth most gratifying results of quartz mining at Pike's Peak and Gregory. The production of gold was much larger than he ever imagined, until recently. The Pacific Railroad should have the benefit of passing through this Territory. On this route there were miles where a spade need scarcely be struck in order to form a road bed. The yield of gold at Central City will amount to $5,000,000 the present year. There have recently been made discoveries of valuable deposits of iron and coal on the line where the citizens of Colorado desire to have the road built—about the 40th parallel. Timber and water were abundant, and there was every needed facility for the construction of the road. Colorado would soon contain the requisite number of inhabitants to entitle it to become a State. Give us this road and you greatly facilitate its settlement, the development of its resources, and insure its immediate and permanent prosperity. In return, we shall give you material aid of no mean magnitude, and a large and profitable addition to your income. Some objections to this route are urged in California; but he was assured that a careful investigation of all the advantages and disadvantages would result in a decision in its favor.

Mr. Ruggles made a brief but characteristic address, abounding in the logic of "facts and figures," for which he has so long been distinguished. He thought that the government would make more money by running the road through the regions of the gold and silver mines, than would be expended in its construction. With this route once opened, the future magnificence of America would more than realize the poet's dream. The emigration to the now far West would be magical in its developing influence upon the now almost inaccessible regions of the country.

Mr. Bloodgood, of N. Y., followed in the same strain, advocating eloquently the importance of the road in a commercial point of view. As a commercial route it would have the advantage over all others. It would cause the commerce of the East to flow across the continent. It would bring the gold of California direct to New York, instead of scattering it to all parts of the world.

Mr. B. made some strong points, and was well fortified with statistics—so dear to practical men. But as these arguments have been urged through so many years, they become familiar, which renders unnecessary extended reports.

The first resolution of the Business Committee—setting forth the importance of the road—was adopted unanimously.

Adjourned.

THIRD DAY'S PROCEEDINGS.

The business resolutions pending at the adjournment on Wednesday coming up, Mr. McPherson offered, but afterward withdrew, an amendment to reduce the number of places for receiving subscriptions.

Mr. Ruggles called the attention of the Commissioners to the provision of the act of incorporation requiring the company to complete a telegraph as well as a railroad, from the Missouri to the Pacific, on pain of forfeiture of the whole.

Measures had been taken to secure the co-operation of the Emperor of Russia in the great work of completing a continuous line of telegraph passing through Russia and British America on the Pacific, and across Behring's Straits, so as to connect St. Petersburg directly with Washington. Of this vast work, 14,000 miles long, Russia had already finished 8,500 miles extending Eastward from Moscow, and had provided the materials for the residue.

Mr. Tilden, of N. Y., spoke upon the military and political necessity of the road. No man ever felt more profoundly than he, or ever sought more earnestly, according to the feeble measure of his ability, to maintain the unity of this republic—a unity to be maintained by military force sometimes, and sometimes by wise forcasting deliberations. This railroad, and all railroads, were better defences than all the fortresses ever erected.

Mr. Robinson, of California, offered the following resolution to test the sentiment of the convention. It was unanimously adopted:—

Resolved, Unanimously, that the President of this Board of Commissioners is hereby instructed to petition Congress immediately upon its reassembling in December next, to amend the Pacific Railroad Company act so it shall read, "The capital stock of said company shall consist of one million shares of one hundred dollars each, which shall be subscribed for and held in not more than two thousand shares by any one person.

The business resolution, as amended, was then carried unanimously. It therefore stands as above, excepting the addition of more places for opening books and fixing the date of opening from the first Wednesday in November.

Mr. Ruggles read the residue of the resolutions reported by the business committee, which were unanimously adopted. They are as follows:—

Resolved, That the security to be given by the treasurer shall be his bond, conditioned for his faithfully accounting for all moneys which may come into his hands, with two sureties to be approved by the president and secretary for $100,000. The treasurer shall be responsible only for due care in the safe keeping of the moneys which shall actually come into his hands. He shall keep on interest any funds which may accumulate in his hands, at the highest rates consistent with safety.

Resolved, That a committee, consisting of one member from each state and territory, and one from the members at large, be appointed by the president to apply to Congress for any auxiliary legislation which may be necessary and proper to facilitate and expedite the construction of the work which the present Board was appointed to promote.

Resolved, That a committee of thirteen members be appointed by the president which shall have advisory powers, with the officers of the company and any other powers when the Board is not in session it may lawfully delegate.

Resolved, That the president, secretary and treasurer shall *ex officio* be members of each of the three committees, and five members, exclusive of the officers of the board shall constitute a quorum of said committees convened on due notice to all the members.

Resolved, That when this board adjourn it shall adjourn subject to the call of the president and secretary upon notice of not less than ten days, addressed by mail to each member whose address shall be known to these officers.

Mr. Cass offered the following resolutions, which were adopted:

Resolved, That the treasurer is authorized and directed to pay the warrants drawn on him by the president and countersigned by the secretary, which warrants shall only be drawn for the legitimate expenses of the organization which occur subsequent to the time of meeting of the commissioners; but no expenses incurred prior to that date shall be paid excepting for the advertising required by the act of incorporation.

Resolved, That the advisory committee of thirteen be a committee on expenditures and accounts, and no warrant shall be drawn for any account until approved by said committee to audit the final accounts of the treasurer.

Resolved, That it shall be the duty of the secretary to keep an account of all warrants drawn on the treasurer by the president and countersigned by him, showing the date, purpose for which drawn and amount of said warrants. He shall also file in his office the original bill or vouchers, for which the warrants were drawn.

Mr. Ruggles offered the following, which was unanimously adopted:—

Resolved, That it be referred to a committee of three members, from New York, to be appointed by the president to petition the canal board of New York to exempt from canal tolls, all railroad iron carried on the canals of that state to be used in the construction of the Union Pacific Railroad.

Mr. Tilden offered the following, which was adopted:—

Resolved, That a committee consisting of five members be appointed by the chair to collect useful information in respect to the contemplated Pacific railroad, the various routes proposed, and the agricultural, mineral and topographical character of the regions traversed by such routes; and that all the members of this Board be requested to transmit to the said committee such information as they may possess or acquire in these respects.

Mr. Ruggles again spoke of Utah, and its telegraphic communication with the East, and read telegraphic correspondence which had passed between members of the Board and Mormon elders in the absence of President Brigham Young, occupying, as he observed, a little over two hours in transmission, and traversing over 1100 miles.

Mr. Smith of Iowa called up his resolution to place the acceptance of the act on file with the Secretary of the Interior. Gov. Dennison moved to amend by placing on the file the certified proceedings of this convention. Carried.

Mr. Cass offered the following, which were adopted:—

Resolved, That the newspaper press throughout the loyal states be respectfully requested to publish the proceedings of this convention for the purpose of aiding in the success of the great enterprise of a Pacific railroad.

Resolved, That the officers of the Board of Commissioners be instructed to publish in a pamphlet form for general distribution, copies of the proceedings of the convention, and such other matters as may, in their judgment, promote subscription to the capital stock of the company.

Gov. Dennison offered the following, which was adopted with much applause:

Resolved, That the thanks of the board of commissioners of the Union Pacific Railroad Company are hereby tendered to the Hon. William B. Ogden, president of the board, for the dignified, able and courteous manner in which he has presided over their deliberations at their first meeting, so important to the highest interests of the country.

Mr. Robinson moved that the thanks of the convention be returned to the various railroads which had tendered their courtesies, to the superintendent of the Illinois and Michigan canal for the excursion to the Hydraulic works, and to the citizens of Chicago for their hospitality. Carried.

A few minutes were spent in pleasant social discussion and the convention dissolved.

Annexed we give the preamble and resolutions which passed the Convention:

The commissioners of the Union Pacific Railroad Company, incorporated by act of Congress, approved July 1, 1862, assembled at Chicago, in conformity with said act, on the 2d day of September, 1862, deem it proper and necessary to declare the motives which have induced them to accept the trust committed to them by the act, and the public considerations by which in their judgment, those who direct the affairs of the company should be exclusively guided. They do, therefore,

Resolve, 1. That the speedy completion through the territory of the United States, from the Atlantic to the Pacific, of a railway communication affording adequate means of transit for persons and property, and especially for the mails and military forces of the government has become a matter of urgent public necessity, not only in facilitating and augmenting the commerce, and developing the agricultural, mineral and fiscal resources of our continental union, but pre-eminently in providing for the public defence, and perpetuating the political unity of the Atlantic and Pacific portions of the republic.

Resolved, 2. That the Eastern division of this great continental chain extending from the Atlantic Ocean to the Missouri river having already been completed by the capital and enterprise of companies incorporated by the several states, it was eminently proper for the United States to incorporate a national company for completing the residue, reaching from the Missouri to the Pacific, with such aid from the national Treasury and resources as seemed to be necessary, and that the country may well rely on the continuance of the same wise and parental policy to expedite the efforts of the company to complete the work with all practical despatch.

Resolved, 3. That it was peculiarly the duty of the nation which had assumed and exercised the right greatly to extend its original limits by annexing the broad continental area between the Mississippi and the Pacific, and that, too, for the avowed purpose of protecting the commerce and territory of the Union from foreign interference, to exert all its powers to secure the completion of a chain of communication so vitally important to both.

Resolved, 4. That the denationalizing and treasonable effort now in progress to separate the slaveholding portion of the Union from the residue, could it be successful, would inevitably be followed by attempts still more flagitious not only to detach the states on the Pacific but even to separate the states on the Lakes and the Upper Mississippi and Missouri from those on the Atlantic, and possibly from each other, that this audacious and abominable attempt to demolish the fabric of our national government is secretly encouraged if not openly approved by at least a portion of the European world, and that the American people are now impelled by every motive of interest, duty, pride and honor, and every instinct of

self-respect and self-preservation to avert from themselves and posterity a calamity so enormous.

Resolved, 5. That the peculiar character of the pending rebellion, involving, if successful, the utter destruction of our national organization and the consequent reduction of our hitherto powerful republic to the fragmentary and feeble condition of central Europe, entailing on our continent, for centuries to come, perpetual internal strife, if not interminable war, imperatively required not only the utmost exertion of the military and naval power of the government but the immediate adoption of every measure of civil administration for strengthening the bonds of our existing Union; and that nothing will contribute more permanently and effectually to that object than the binding without delay by an adequate chain of communication, our Pacific coast and the rich metalliferous regions of the interior to the large and powerful group of food-producing States around the lakes and the maritime States on the Atlantic seaboard; and that such a channel of interoceanic intercourse through this central portion of the continent, occupied by a populous and homogeneous race enjoying easy and daily access to the two oceans of the globe, would enable it not only to resist and defy any farther attempt either at home or abroad to dismember our territory, but to exercise a commanding influence over the commerce if not the political destinies of the civilized world.

Resolved, 6. That Congress acquired a new claim to the gratitude of the people in delegating to an incorporated company the duty and responsibility of constructing and managing this great work of national improvement, and in aiding it by the public credit and grants of the public lands; that through this instrumentality the enterprise will enjoy the benefit of a permanent and steady direction, exempt from the uncertainty and delay of yearly appropriations, and especially from the vicissitudes of party conflicts and the demoralizing effects of party interference, permitting its directors to carry forward the work with activity, intelligence and honesty, on a continuous and systematic plan, undisturbed by any changes or vacillations in our public affairs.

Resolved, 7. That the commissioners are profoundly impressed with the conviction that under the pressing exigency of our present struggle for national existence, this great channel of intercourse, with its rich and invigorating streams of national commerce and its unrivalled military facilities, is more than ever needed to preserve the American Union from political dissolution; that the pressure of the pending war, so far from affording any reason for delaying its prosecution, shows only the more its urgent necessity; that no time should be lost in securing its speedy completion by every reasonable effort, and that in a crisis so grave as the present, the company and the country may properly and confidently rely on the government promptly to afford any further aid or facility which the vital interests involved in its vigorous prosecution so evidently required.

Resolved, 8. That the commissioners will duly proceed to open books of subscription to the stock of "the Union Pacific Railroad Company," in the manner and on the terms prescribed in the act of incorporation; that said books be opened on the first Wednesday of October next, at twelve o'clock at noon, at Portland, Maine; Concord, New Hampshire; Rutland, Vermont; Boston, Massachusetts, Providence, Rhode Island; Hartford, Connecticut; New York City; Trenton, New Jersey; Philadelphia City; Wilmington, Delaware: Baltimore; Maryland; Washington City; Columbus, Ohio; Indianapolis, Indiana; Chicago, Illinois; Detroit; Michigan; Milwaukie, Wisconsin; St. Paul, Minnesota; Burlington, Iowa; St. Louis, Missouri; Leavenworth, Kansas; Omaha, Nebraska Territory; Denver City, Colorado Territory; Salt Lake City, Utah Territory; and San Francisco, California; to be opened at such localities therein as may be designated by or under the authority of the President, Secretary and Treasurer of this Board, or any two of them, and by such persons as they may in like manner appoint; that said books shall remain open at all said places for two weeks, but if in the judgment of the President, Secretary and Treasurer, or any two of them, it shall prove impracticable to open or keep open the said books at any or either of the said places, such places shall be dispensed with.

The said books shall be kept open in the city of New York, until the amount of subscriptions required by the act of incorporation shall be obtained. A cash payment of ten per cent on the amount of every subscription shall be made by a certificate of deposit to the credit of the treasurer in some bank of good standing, to be approved by him; on receiving such certificate he shall issue his receipt to the subscriber for the amount.

The Tax on Interest Payable to Foreigners.

BARCLAY & LIVINGSTON TO SECRETARY CHASE.

NEW YORK, August 28, 1862.

SIR:—In behalf of many foreign holders of American securities, we solicit the favor of replies to the following queries:—

Under the United States Tax bill, soon to go into effect, what tax will foreigners resident abroad have to pay from?

1. The interest on United States loans?
2. The interest on State and city loans?
3. The interest on railway bonds?
4. The dividends on shares in railway, gas and other corporations? and
5. In what manner and by whom will such taxes be collected?

We desire to make known to our correspondents abroad as soon as possible, not our own, but an authoritative interpretation of the law. This you will please accept as our apology for thus trespassing upon your time. We have the honor to be, sir, your obedient servants,

BARCLAY & LIVINGSTON.

To Hon. S. P. CHASE, Secretary of the Treasury, Washington, D. C.

THE REPLY OF INTERNAL REVENUE COMMISSIONER.

TREASURY DEPARTMENT, OFFICE INTERNAL REVENUE, WASHINGTON, D. C., Sept. 3, 1862.

SIRS—I have the honor to acknowledge the receipt of your letter of the 28th of August.

In reply permit me to say that whenever coupons are payable in a foreign country, no deduction can be made legally by virtue of our excise laws.

On dividends and coupons payable in this country, the deductions will be made in conformity to the Excise law.

In neither case is the residence of the holder to be regarded. Your obedient servant,

GEORGE S. BOUTWELL, Commissioner.

Messrs. BARCLAY & LIVINGSTON, New York.

OTTO AHLSTROM,

MANUFACTURER OF THE

LOUDON & AHLSTROM'S

PATENT EXPANSION SCREW FASTENINGS,

A QUICK and sure means of making preparatory Fastenings —The hole not requiring to be large at the bottom.

Also for ANCHORING LIGHT-HOUSES, BEACONS, BUOYS, BRIDGES, DAMS, FORTIFICATIONS, etc.

For NEWEL, GATE AND FENCE POSTS, and IRON RAILINGS in various ways.

Also, a CHEAP and ready means for fastening Iron or other ornaments (large or small) to stone or brick buildings.

For STAPLES, HINGES, AWNINGS, SIGNS, SHUTTER FASTENERS, LEADER HOOKS, etc.

For INSIDE WORK, such as for fastening articles to Hard Walls, Marble, etc., without hammering or using lead. For fastening Marble Tops to Furniture, etc. They are also so constructed as to be applied in Wood.

For LIFTING PURPOSES, such as Foundrymen's Tools for raising their patterns of wood or metal from the sand. They may be used in tapped or smooth holes.

Orders promptly executed by

OTTO AHLSTROM,
22nd St., 2nd Avenue, N. Y.

PROPOSALS
FOR $250,000 OF THE CROTON WATER STOCK OF THE CITY OF NEW YORK.

SEALED proposals will be received at the Comptroller's Office, until THURSDAY, September 25th, 1862, at two o'clock P. M., when the same will be publicly opened for the whole or any part of the sum of two hundred and fifty thousand dollars ($250,000) of the Croton water stock of the City of New York, authorized by Chapter 372 of the laws of 1860, and as amended by Chapter 181 of the laws of 1861, and by an ordinance of the Common Council, approved by the Mayor October 4, 1861, for increasing the supply of Croton water, etc.

The said stock will bear interest at the rate of six per cent. per annum, payable quarter-yearly, and the principal will be redeemed November 1, 1883.

The proposals will state the amount of stock desired, and the price per one hundred dollars thereof, and the persons whose proposals are accepted will be required to deposit with the Chamberlain of the City, within ten days after the opening of the bids, the sum awarded to them respectively.

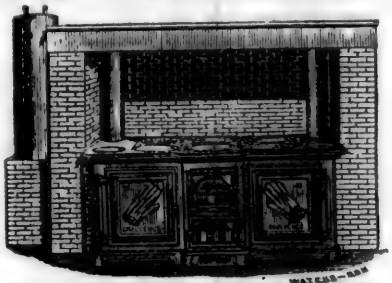
On presenting to the Comptroller the receipts of the Chamberlain for such deposits, the parties will be entitled to receive certificates for equal amounts of the par value of the stock, bearing interest from the date of payments.

Each proposition should be sealed and endorsed 'Proposals for Croton Water Stock of the City of New York," and the same inclosed in a second envelope, addressed to the Comptroller.

The right is reserved to reject any or all of the bids, if considered necessary, to protect or promote the interests of the City.

ROBERT T. HAWS, Comptroller.

CITY OF NEW YORK, DEPARTMENT OF FINANCE, COMPTROLLER'S OFFICE, Aug. 26, 1862. 3t35



THE NEW YORK CENTRAL RAILROAD COMPANY, TREASURER'S OFFICE, ALBANY, July 19, 1862.

EIGHTEENTH SEMI-ANNUAL DIVIDEND.—The Directors of this Company have declared a Semi-annual Dividend of Three per cent. on the Capital Stock thereof,—free of the United States Income Tax, which will also be paid by the Company—payable on the 20th day of August next, upon stock registered at New York, Boston and Albany, and on the 20th day of September next upon stock registered at London.

Stockholders whose stock is registered at New York, will receive their Dividends at the office of DUNCAN, SHERMAN & CO.; those whose stock is registered at Boston, at the office of J. E. THAYER & BROTHER; those whose stock is registered at Albany, at the ALBANY CITY BANK; those whose stock is registered at London, at the UNION BANK OF LONDON, the latter at the rate of 4s 1d to the dollar.

The Transfer Books will be closed at the close of business on Thursday, the 31st day of July inst., and will be re-opened at New York, Albany and Boston on the morning of Saturday, the 23d day of August next.

8t30 JOHN V. L. PRUYN, Treasurer.

Challenge Air-tight KITCHEN RANGES,

May be placed in a fire-place without masonry, and with or without water-back; or may be set out on feet, as an ordinary stove.

This range, already very popular, has the **LARGEST OVEN** of any in the market; BAKES PERFECTLY, never burning to brown at the bottom; BOILS, ROASTS and BROILS with unequalled facility and dispatch, and with extraordinary **ECONOMY OF FUEL**, which may be either coal or wood. Flues large and easily cleaned. A child can manage it, so simple is its construction. Castings extra heavy, and design plain and chaste.

Four sizes, adapted to families and hotels.

Beacon Light

SUMMER AND WINTER

PORTABLE RANGE,

Is a very popular range, having six boiler holes, one large oven that bakes perfectly, with an arrangement for roasting or heating irons at the end. It is very economical of fuel. For a FEW DOLLARS a family may be supplied with PERFECT COOKING APPARATUS, equal to the highest price stove in the market.

Three sizes, adapted to coal, or wood.

SANFORD'S
MAMMOTH
OR
GLOBE
HEATERS.

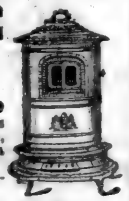
The best stoves for RAILROAD DEPOTS and SHOPS, and all places where a great heat is required. They are very durable, and very economical of coal.

Beware of imitations that are inferior in strength and in other respects.

TESTIMONIALS.

HUDSON RIVER RAILROAD OFFICE, N. Y

This Company have now in use, over two hundred of Sanford's Mammoth Heaters, in Station Houses, Work Shops, and Engine Houses; we commenced using them in 1853, and some of the first stoves put up are still good and in use. We consider them the best Heaters now in use.



J. M. HEBARD, Supply Agent.

UNION FERRY COMPANY.

The Mammoth Heaters have been used by this Company in their waiting rooms at the several ferries and found to be very excellent stoves and more durable and valuable than any heretofore used. CYRUS P. SMITH, Managing Director.

CUMBERLAND COAL.

THE BORDEN MINING COMPANY

ARE now prepared to fill orders and to make contracts for the season of 1862, for CUMBERLAND COAL, DELIVERABLE ON BOARD VESSEL AT Baltimore, Md., Alexandria, Va., or Georgetown, D. C. Purchasers may rely upon the Coal proving equal in quality to that heretofore furnished.

The Company also have the pleasure of announcing that they have completed, after two years' labor, their shaft and machinery upon their new property in the VALLEY OF GEORGES CREEK, and are lifting from the very heart of the Coal Basin a superior and perfect article of BITUMINOUS COAL, remarkably free from impurities of every description, and possessing qualities peculiarly adapting it to Locomotive use, and to generating steam under all circumstances. This Coal will be known in market as "BORDEN'S PIT COAL."

Our Railroad friends, and others requiring a superior Coal, will find it to their interest to give this a trial before contracting elsewhere.

THE GREAT FIRE IN TROY.
Unparalleled Triumph
OF
LILLIE'S SAFES!

The following certificates explain themselves:

TROY CITY BANK, May 21, 1862.

LEWIS LILLIE, Esq.—Dear Sir: I am sure it will give you as much pleasure to know as it does me to say, that in the recent fire of the 10th inst., which desolated our city and destroyed our Banking-house, the contents of our Bank vault, though the building itself was a heap of ruins, remained entirely unharmed. This result we attribute entirely to the fact that our old Wrought Iron Doors were, about two years since, exchanged for a set of your celebrated Chilled and Wrought Iron Doors and Frames. With the old doors, not a book or paper in the Vault could have been saved; as it is, nothing in it was even damaged, though exposed to the most intense heat.
Yours, respectfully, S. K. STOW, Cashier.

TROY, N. Y., May 14, 1862.

The undersigned, using **Lillie's Chilled and Wrought Iron Fire and Burglar Proof Safes,** at the time of the late disastrous fire in this city, would state that our safes were subjected to a severe test by fire, the heat varying in intensity, according to the locality and surroundings. The time they were exposed to the fiery ordeal, unprotected by water, varied from 24 to 72 hours. We would say that our money, papers, books, etc. were well preserved, and the Safes are suitable for further use. By comparison with Safes of other manufacture, equally exposed, we have no hesitancy in recommending Safes of Lillie's manufacture to the public on their demonstrated merit as entitled to unparalleled confidence as fire-proofs.

James Kenyon,	S. Bachelder,

Percy & King,	W. D. Haight,
McCoy & Beadle,	Denio & Freiot,
Coon & Van Valkenburgh,	Walsh, Petit & Anthony,
S. S. McClure,	D. H. Snyder,
Ross & Smith,	Jonathan Seaman.
Robert Green,	

Not dug out—nothing in them.

TROY, May 19, 1862.

The undersigned had one of **Lillie's Wrought and Chilled Iron Safes,** which went through the fire of the 10th of May. The Safe was exposed to a severe fire for over 24 hours. In falling it turned on its face, and when turned up to open the doors was red-hot. The back of the lower part of the Safe (behind the books) was filled with pennies, which, in falling over, pressed against the books, and brought them directly in contact with the doors. The wrappers on the pennies were mostly good. The books were unfit for further use, but the writing on them was partially legible and could be copied.
DUSENBURY & ANTHONY.

TROY, May 19, 1862.

This is to certify that we had in our store, in this city, when it burned, one of **Lillie's Small Safes,** which was in the fire, without water on the building or Safe. Most of the valuables were removed before the fire, and therefore we were not in haste to get the Safe out of the burning ruins. Some of the papers left in the Safe were legible when taken out, but most of them were charred.
I. M. SINGER & CO.,
Per G. W. BABCOCK, Agent.

This is to certify that the undersigned had one of LILLIE'S Patent Chilled Iron Safes in their store, which was burned during the late severe fire in this city, and we are happy to state, the Safe preserved all its contents in first-rate condition. All the papers were legible, and the books will do for further use, without even rebinding.
GRANT, NUTTING & CO.

The foregoing comprises all the Safes of my manufacture that were in the fire, and below will be found certificates from all the owners of Safes manufactured several years since, by World's Safe Company, who used my Patent Chilled Iron Shell, but not my Fire-Proof Cement.

WORLD'S SAFE COMPANY'S SAFES.

TROY, May 19, 1862.

The undersigned, having Safes manufactured by the late World's Safe Company, and which were subjected to the great fire of the 10th inst., in this city, would state that our Safes were exposed to a severe heat, being confined in the burning ruins, unprotected by water, from one to three days. On opening the Safes the contents were mostly legible, and to a far greater extent than could be reasonably expected of any Safe. We concur in the opinion that the Safes manufactured by LEWIS LILLIE, which were subjected to the fire for a longer time and preserved their contents, are superior and powerful protectors against fire, and by this test we are prepared to recommend them as such to public patronage.

Lyman Bennett,	Silliman, Matthews & Co.,
Flood & Dunham,	E. L. Mallory,
John Hutchinson,	E. H. Virgil,
Sup't National Express Co.	

The undersigned, having Safes manufactured by the late World's Safe Company, and which were subjected to the great fire in this city, would state, that on opening our Safes the contents were mostly legible. We concur in the opinion that the Safes manufactured by LEWIS LILLIE, which were subjected to the fire for a longer time and preserved their contents, are superior and powerful protectives against fire, and we are happy to recommend them to public patronage.
W. & L. E. GURLEY,
R. L. & G. DRAKE,
LEONARD SMITH,
H. E. & W. ALENDORPH, Absent.

TROY, May 19, 1862.

To whom it may concern: We would certify that when the recent fire broke out in this city, we took out from our Safe (which was made by World's Safe Company) all our books, papers, etc., and then left it to the flames without shutting the door, and the Safe will do for further use by being repaired, although the book case was destroyed by the door being left open through the fire.
ACKLEY & CO.

TROY, May 19, 1862.

The undersigned, using Safes manufactured by the World's Safe Company, at the time of the late disastrous fire on the 10th instant, in this city, would state that our Safes were filled with fire-brick for the fire-proof, and while several of this class preserved their contents, ours were considerably charred, and only a part legible. In justice to Mr. LEWIS LILLIE, we are pleased to state that Safes of his manufacture proved to be powerful protectors against fire, and have preserved their contents, after having been exposed to the fiery ordeal, unprotected by water, from one to three days.

Stephen Holton,	Luther Greenman,
Bennett, Strickland & Fellows,	E. W. Johnson,
Corless & House,	J. H. Goodsell.

TROY, N. Y., May 17, 1862.

LEWIS LILLIE—Dear Sir: We were using at the time of the late severe fire of 10th inst., a Safe purchased in 1852 of the late World's Safe Company. The contents were considerably charred, but our Ledger is mostly legible, and we are able to copy it.
The Safe was subjected to a severe heat for over eighteen hours, and we are satisfied that if water had been thrown on the ruins, as is ordinarily the case, the contents would have come out uninjured. You will please repair our Safe, placing in it the improvements embraced in Safes of your manufacture, and oblige
SHELDON & GREENE.

N.B.—The above Safe is believed to have damaged the contents more than any of those named in this circular.

There were only seven Sheet Iron Safes, made by Herring and others, outside of the railroad depot, that were exposed to the fire, four of which were entirely burnt out; the fifth was saved by being early cooled off by water; the remaining two were not severely tested.
LEWIS LILLIE.

The Intercolonial Railway.

The project of building an intercolonial railway through Nova Scotia, New Brunswick and Canada East, connecting Halifax with Quebec, has been again brought before public notice. It is stated that the Duke of Newcastle as Colonial Secretary, has consented, on behalf of the British government, to offer the Provinces an imperial guarantee of interest toward enabling them to raise by public loan the requisite funds for building this road. A delegation from Nova Scotia, consisting of the Hon. Mr. Howe, Provincial Secretary; Hon. Mr. McCally, Chief Railway Commissioner, and Hon. Mr. Annaud, Financial Secretary —also one from New Brunswick, consisting of the Hon. Messrs. Tilley, Steeves and Mitchell—have been appointed to confer with the members of the Canadian Government on this subject and on intercolonial free trade. The meeting was to take place on the 10th instant. It is believed that this movement will be only preliminary to others which may be held with more or less regularity, to unite the people of the British provinces more closely together, as well as promote the great common object of a railroad, which shall make an uninterrupted line of communication on British territory from the Atlantic ocean to the head of Lake Superior, and ultimately to the Pacific ocean.

It is nearly a quarter of a century since this subject was first brought to public attention by Lord Durham, then Governor General. It was not till 1846, however, that a survey of the route was made by Major Robinson. That officer's report presented five several lines, the shortest of which was 595 miles, and the longest 692, between Halifax and Quebec. The one which has found most favor is known as the Bay of Chaleurs route, following the general direction of the Eastern shore of New Brunswick, where the population is most dense, and the land best adapted for cultivation as well as railroad construction. Commencing at Halifax and running to Truro, at the head of the Bay of Fundy; thence over the Cumberland Mountains to Amherst; along the coast to Shediac, crossing by a north-westerly course the Richibucto and Miramichi to Bathurst; coasting the Bay of Chaleurs to the Restigouche, and reaching by the Metapedia valley to the shores of the St. Lawrence. The several parts of the road by this route would be in miles as follows:—

Halifax to Truro	55	In Nova Scotia 124 miles.
Truro to Amherst and Bay Verte	69	
Bay Verte to Shediac	26	In New Brunswick 234 miles.
Shediac to Miramichi	74	
Miramichi to Bathurst	56	
Bathurst to Dalhousie	48	
Dalhousie to the Metapedia	30	
Metapedia to the St. Lawrence.	86	In Canada 277 miles.
From this point on the St. Lawrence to Quebec	191	
Total distance	635	

The distance would probably be shortened by 110 miles, the length of the Grand Trunk Railway already completed between Quebec and Riviere du Loup, making the actual length of the new line 525 miles.

Last Spring, when the Duke of Newcastle was explaining the attitude of the British government to this project, he estimated the length of road to be built at 350 miles. It is true, that a somewhat shorter line could be built by pursuing a more direct course; but this would bring the road so near to the State of Maine as to make it practically worthless to the British government, in the event of hostilities with this country.

The estimated cost of the work made by the Duke, on that occasion, was £3,000,000 sterling: but as the distance is fifty per cent. greater than was then supposed, a proportionate increase must be made to the amount required. It would not be unsafe, thinks the Quebec *Chronicle* to put the aggregate at five millions. If the interest on this be four per cent., the sum of £200,000 a year will have to be raised by the Provinces and the Home Government. What proportion of this should be contributed by the respective parties is not stated; but Great Britain will certainly be expected to furnish one-half. The preposition submitted by the provincial delegates last Spring was of this character; but was rejected by the Home Government, although it was allowed the selection of the route. The impression seems to be that it is now ready to go into it, with some modifications in respect to details.

There can be no question that the provinces of New Brunswick and Nova Scotia would be benefitted very largely by such an enterprise; and that it is of importance in an economical view to the British government, unless it is prepared to relinquish its authority over Continental North America. Whatever may be thought of the project as a paying concern, the great *need* of it will not be questioned by any person who takes an intelligent view of the parties interested in its construction.

P.S.—Since the above was written we have seen notices of the Convention in some of the Provincial papers. The feeling of the delegates is said to have been unanimous in favor of the prosecution of the work, no mention being made of the route to be selected. It is also stated that a preliminary arrangement as to the relative share of the expense to be borne by the several parties, has been made. In virtue of this, Canada is to assume five-twelfths, and the two lower provinces the remaining seven-twelfths of the cost of the work. The bonds being endorsed by the Home Government, it is believed that with the existing

easy rates of money in England, the necessary amount can be raised at three per cent. interest. As, however, consols are at a discount of six or seven per cent., we suppose the rate will be put higher to enable the securities to be negotiated at par.

Baltimore and Ohio Railroad.

A meeting of the Board of Directors of the Baltimore and Ohio Railroad Company was held in Baltimore on the 10th inst., and was attended by nearly a full membership. The most important business of the session was the report of the committee of finance, to which was appended a series of resolutions recommending that a dividend of four and a half per cent. on the stock of the Washington Branch Railroad be declared for the past half year ending on the 30th of September, instant, and a dividend of three per cent. on the stock of the main stem of the Baltimore and Ohio Railroad, both payable on and after the 30th inst. Holders of the bonds of 1862, issued for the extra dividend, were also notified that it is necessary to convert the same into stock prior to the 18th instant, the date on which the books will be closed, to secure the dividend on the stock.

In connection with the report of the committee, John W. Garret, Esq., President, thought it would be interesting to the board to present the bases and prospective condition of the treasury, on which the recommendations were founded. Grave apprehensions, in view of the present position of the road, were to be entertained of renewed losses, and of large demands upon the capital of the company, which will continue to require the most careful husbanding of its resources. But, as in this period of peril, the drains upon the means of the State of Maryland, of the city of Baltimore, and of the stockholders, are most onerous, the relief created by these dividends will prove a source of marked and general satisfaction. It must therefore be a subject of great congratulation to the board that, under such circumstances, it is enabled to make so important contribution to the relief of the great interest involved.

The profits were understood to have been derived from the large regular transportation of the company during July and August, when the road was uninterrupted, thus being exclusive of all Government business. The business during those months proved to have been the largest in the history of the company since the opening of the road to the Ohio river.

After the remarks of the President, the resolutions were adopted, and the dividend declared. The board was in session for several hours, but much of the business had no general public interest.

Morris and Essex Railroad.

The Morris and Essex Railroad Company are making rapid progress on their road, which intersects the old road at East Newark, and runs parallel with the New Jersey Transportation Company's line over a mile. Thence it runs in an easterly direction across the Newark meadows, over the Hackensack River to the Erie Railway tunnel, making Hoboken its terminus. The rails have been laid, but some time will be required to make the road level. Dirt trains are running daily for filling-in purposes, and it is the desire of the company to commence running over their new route by the first of January. Spacious brick buildings have been erected in Hoboken, which will be occupied as depots and for freighting houses. The passenger depot will be supplied with all the modern improvements for the accommodation of the traveling public, while the ingress and egress to the ferry will be arranged in the most satisfactory manner.

Madison and Indianapolis Railroad.

The earnings of this road for the fiscal year ending December 31, 1861, were:

From passengers	$49,336 62
" freight	70,050 88
" military passengers and freight	16,540 00
" Jeffersonville Railroad	42,424 46
" express, mail, etc.	27,271 58
	$206,623 54

And the expenses were:

Running road	$22,925 46	
Repairs of road	47,487 80	
Repairs of cars and machinery	26,340 11	
All other expenses	36,958 64	
		133,712 01
Net earnings		$71,911 53

Compared with the previous year, the gross earnings show a decrease of $24,939 94; with an increase in expenses of $2,228 90—making the decrease in net earnings $27,168 84. The receipts of the company from all sources during the year were:

From transportation, as above	$205,623 54
Five income bonds at par	5,000 00
Columbus and Shelby Transp., $13,931 65; less expenditures, $9,718 61	4,213 04
Peru and Indianapolis Judgment	823 76
Sales of old iron, etc.	2,827 72
Miscellaneous	1,780 91
Balance Dec. 31, 1860	5,350 63
	$225,719 60

And the disbursements were:

Current expenditures, as above	$133,712 01
Taxes, $1,070 84; commissions, $247 98	1,318 82
Col. & Shelby Railroad construction.	975 03
Jeffersonville Railroad	8,056 98
Bills payable	2,926 85
Interest, $51,462 06—less $1,347 25 received	50,114 81
Dividend scrip paid by conversion into income bonds	3,808 40
Cash appropriated toward the payment of interest	11,803 68
The United States	3,730 59
State of Indiana	2,581 50
Miscellaneous	1,124 40
Balance in treasury Dec. 31, 1861	5,566 63
	$225,719 60

The receipts from transportation for the three months ending March 31, 1862, were $52,962 18; and the expenditures $28,811 23; the receipts from all sources during the same time were $70,898 36; and the disbursements, including $10,096 94 appropriated toward the payment of interest, $51,773 58. The amounts due from the United States, State of Indiana, Post office department, etc., was $2,319 27; and the balance in the treasury was $16,805 61.

The following is a comparative statement of the earnings and expenditures for seven years:

	Earnings.	Expenses.	Net Earnings.
1855...	$268,103 33	$199,351 33	$68,853 00
1856...	270,317 66	194,369 09	75,948 57
1857...	212,664 40	149,249 96	63,414 44
1858...	206,114 16	123,481 78	82,632 38
1859...	200,654 44	121,275 27	79,379 17
1860...	230,563 48	131,483 10	99,080 38
1861...	205,623 54	133,712 01	71,911 53
Total.	$1,594,041 01	$1,052,922 54	$541,218 47

During the past year, in addition to a considerable amount of stone masonry, the company have laid over 50,000 cross ties; had 210 tons of T rail re-rolled, and 260 tons repaired; relaid 14 miles of track; built a new Howe bridge, 161 feet long, and two trestle bridges each 150 feet long—all at an expenditure of over $27,000, the whole cost of which has been charged to repairs of road. The rolling stock has been kept in thorough repair, and large additions made thereto. All bills for the current expenses of the road, and the service rolls, have been fully paid.

The following extract from the report of the president to the stock and bondholders of the Indianapolis and Madison Railroad Company, (as reorganized,) made July 4, 1862, fully explains the present financial condition of the company:

The accumulation of over due interest, added to the fact that the principal of the bonds secured by the first mortgage would fall due May 1, 1861, rendered (as intimated in our last report to the Stockholders of the M. & I. Railroad would be the case,) some arrangement with the creditors of that road necessary. As a preliminary, the undersigned took the liberty of issuing a circular, dated March 11, 1861, addressed: "To the Bond and Shareholders of the Madison and Indianapolis Railroad Company," detailing in short the situation of the Company, suggesting a plan whereby by a foreclosure and sale of the road, and the reorganization of a new company, not only would the holders of the first mortgage bonds be fully protected and secured, but something might be saved to the junior creditors and shareholders, and calling a meeting to be held at the office of Messrs. Winslow, Lanier & Co., New York, on the 10th of April, 1861.

The meeting was held, appointed a committee to whom was referred the matters relating to the interest of the road, and adjourned to meet at a subsequent day at the Astor House, in New York.

At the adjourned meeting the recommendations contained in the circular above alluded to, were substantially adopted, and a committee was appointed to draw up an agreement and secure the co operation of the holders of the first mortgage bonds, the junior creditors and share holders of the Company, and act as Agents or Attorneys in fact, for the purchase of the road when sold, and in the reorganization of a new Company, under the laws of the State of Indiana, in accordance with the terms of the agreement.

Messrs. John Ferguson, Elihu Day, and George Griswold, Jr., acting as the committee, secured the acquiescence of the holders of more than nine tenths of the first mortgage bonds, and that of a sufficient number of the holders of junior claims, and of the shareholders, and then as Agents or Attorneys in fact, of those who signed the agreement, called upon Peter McMartin, Esq., upon whom the trust in the Mortgage deed had devolved to foreclose the same and proceed to a sale of the road. Under the advice of counsel in Indiana the Trustee proceeded and obtained a decree of foreclosure and sale of the road, its property, franchises and appurtenances in the Circuit Court of the United States for the District of Indiana.

The road was offered for sale on the 27th day of March, 1862, and purchased by the Agents or Attorneys in fact, as aforesaid, for account of the parties to the agreement, and of such others as might thereafter be admitted to a participation of its benefits. A conveyance of the same having been made to the purchasers they were put in possession of the whole property covered by the mortgage and so sold, and having previous to the sale of the road also received a transfer by assignment, as provided for in Item fifth of the agreement between the Madison & Indianapolis Railroad and its creditors, dated Aug. 1, 1861, of certain assets belonging to the Company not covered by the mortgage, as a further security to the holders of the first mortgage bonds, they did on the 28th of March last, organize a new Company, as authorized by the laws of the State of Indiana, by the name of "Indianapolis & Madison Railroad Company," and conveyed to it all the property, rights and franchises purchased by them as

aforesaid, and appointed Frederick H. Smith. Nathan Powell, William M. Dunn, Jacob B. McChesney, Peter McMartin, E. H. Miller, Elihu Day, John Ferguson, and E. Cauldwell, the first directors of said Company, and fixed the capital stock of the same at $850,000, to be divided into 8,500 shares of $50 each, of Preferred Stock, and 8,500 shares of $50 each of Common Stock, and charged the new Corporation with the payment of the principal and arrears of interest of the first mortgage bonds of the Madison & Indianapolis Railroad Company.

At a meeting of the directors of the new Company held on the 28th of March last, a majority being present, F. H. Smith was elected President, and the other officers of the old Company were appointed to the same positions in the new Company, that they previously held in the old, and it being necessary to have an agency of the Company in the City of New York, Messrs. J. & S. Ferguson were appointed as registers of transfers and general agents in that city.

The Directors also authorized the execution of a mortgage upon the road its franchises and appurtenances as security, for an issue of $685,000, to be known as the first mortgage bonds of this Company, to be made and applied in discharge of the conditions made by the Agent or Attorneys in fact, of the Bondholders in the reorganization of the Company. Messrs. Peter McMartin and John Ferguson were appointed the Trustees, and they having accepted the Trust and become parties to the mortgage deeds, the bonds were made payable to them, and having been certified and endorsed, have been placed in the hands of the Agents of the Company in New York, for delivery to the parties entitled to receive them.

The road not having sold for enough to satisfy the bonds secured by the first Mortgage, the assets of the old Company which had been assigned to the Agents or Attorneys in fact, have been conveyed by them to the Trustees of the first Mortgage and President of this Company, and are held by the Trustees as aforesaid, as an additional security to the Mortgage for the bonds secured thereby.

Certificates for Preferred Shares have also been prepared and placed in the hands of the Agents, in New York, to be issued in accordance with the terms of the agreement, for 50 per cent of the amount of the principal and interest due April 1, 1862, of Income bonds and certificate of Dividend Scrip of the old Company, which have been surrendered to the Agents or Attorneys in fact, and Preferred shares will in the same manner be issued to the holders of the remaining Income bonds and Dividend Scrip, when they shall be surrendered.

Certificates for Common shares have also been made and issued to the amount of one fourth, in the names of the parties represented as being shareholders on the books of the old Company, (that being the amount reserved to them in this Company by the articles organizing the same for their interest in the old,) and these certificates have also been sent to the Agent of the Company in New York, to be exchanged with the holders of the certificates for shares in the old Company.

The undersigned hopes that by these proceedings, following so closely the suggestions of the circular issued by him, and before alluded to, the danger he so long and seriously apprehended of the stockholders in the old Company sustaining a total loss of their investment has been averted by the plan of reorganization, secured through the liberality of the creditors of the Company, it reserving to them a contingent benefit to be derived from an increase at any time of the Company's business. Estimates being so seldom realized are but of little value, still the experience of the past five years makes it safe to say there is no reason to anticipate any change for the worse, but on the contrary much to hope for the better.

The office of the Company is at Madison, Indiana. The officers are: F. H. Smith, President; Thomas Pollock, Secretary; T. P. Matthews, Treasurer; and D. C. Branham, Superintendent.

Liability of Railroad Companies for Injuries to Employees.

DUTY OF THE DIRECTORS TO KEEP THE ROAD IN GOOD REPAIR. WHEN NEGLECTED, THE COMPANY IS LIABLE TO SUB-EMPLOYEES FOR INJURIES THEY MAY RECEIVE. PERSONALITY OF COMPANIES.

The plaintiff, one Fifield, was employed as a brakeman on the Northern Railroad of New Hampshire, and while engaged in that capacity received severe bodily injuries, by being caught between the cars. This action was brought against that company in the Supreme Court of Vermont, to recover damages for the injuries so received.

The declaration stated the character of the defendants, the employment of the plaintiff as a brakeman, and alleged that "it was the duty of the defendants to keep said road in good and sufficient repair, and the track so cleared from snow and ice, and other impediments, and the engines and cars used and drawn thereon in good and sufficient order, so that their servants and men employed in making up, running, managing and controlling their said trains upon said road, could, with ordinary care and prudence, do and perform their said duties with safety," yet, that the defendants carelessly allowed their road at the town of Canaan, on the 10th of Feb. 1859, to become filled and blocked up with snow and ice, on the sides of the said road and track; and also carelessly suffered a certain freight car to be and remain out of repair, by reason of which negligence, the plaintiff, on the said 10th of Feb., 1859, and while performing his duty as a brakeman in the exercise of great care and prudence on his part, was unavoidably caught between the cars, his left arm broken and other injuries received, by reason of which he was for some time sick, and put to great expense.

The defendants demurred to the declaration, on the ground that it did not state facts sufficient to constitute a cause of action in favor of the plaintiff and against the defendants. The defendant's counsel maintained that a railroad corporation, from the essential character of its organization, can do no act of itself as a principal, but all its business must, from necessity be carried on by means of agents and servants. The plaintiff, and those other persons through whose negligence he sustained an injury, were employed by the same company to perform separate duties and services, all tending to the accomplishment of one general purpose and result, namely, the transmission of passengers and merchandize over the defendant's road. That it is the duty of the directors of a railroad company to use due diligence to see that all the machinery put upon the road shall be of good construction and material, and to exercise ordinary care and prudence in the selection of trustworthy, and competent agents and servants. But that companies are not responsible to its employees for the care and faithfulness of their co-laborers, in keeping the tracks, engines, cars and machinery in such repair as to be always safe and fit for use when transferred by one servant into the hands of his fellow servant, whose particular business it is to use it.

It was maintained, on behalf of the plaintiff, that at common law all persons are bound to conduct their business, whatever it may be, in such a manner as not to endanger the health, nor the life, nor the property, nor even the convenience of any other; and a corporation is liable to all the penalties which would befal an individual in all civil actions.

The Court held the company to be liable, and the declaration to be sufficient. The following is a part of the opinion rendered at the decision of the case.

Doe, J.—The gist of the declaration is, that by reason of the defendant's corporation negligently permitting its road to be blocked with snow and ice, and a car to be out of repair, the plaintiff a servant of the defendants, employed by a brakeman, was injured.

If the railroad were owned by one individual, and he should personally assume the duty of examining and repairing the road and the cars, and through his negligence in not repairing, or in imperfectly repairing them, a brakeman employed by him should be injured, the employer would be liable. And if the employer did not attend to the repairs himself, and if ordinary care and prudence required that one or more persons should be constantly engaged in making repairs, and the employer, through gross negligence did not employ any, or a sufficient number of repair men, or negligently employed unskilful ones, and a brakeman not knowing this fact, and being in no fault for not knowing it, and being chargeable with no negligence or fault whatever, was injured solely in consequence of such negligence of his employer, the employer would be liable. In such case, the master would be held responsible for the exercise of ordinary care and prudence. If he assumed to do any part of the work himself, he should exercise ordinary care and skill in doing it; if he did nothing personally except hiring all the servants, he should exercise ordinary care in employing a sufficient number of competent servants. And a declaration alleging that he carelessly permitted the track and a car, to become and remain defective, would be sustained by evidence, that they became and remained defective through his personal carelessness and negligence in not discovering and remedying the defects, if he took upon himself that branch of the business; or by evidence that he assumed the general management and superintendence of the road, and employed all the workmen, and that from gross negligence he employed no repair men, or an insufficient number, or unskilful ones, whereby the track and car became and remained defective. In either case the defects would exist by reason of his own negligence. Whether his negligence consisted in not discovering, or in not removing the defects himself, or in not employing any or a sufficient number of repair men, or competent ones, the action could be founded upon his personal negligence, and the allegation that the defect existed by reason of his negligence would be sufficient.

The same general rules must be applicable whether the owner of the road and the employer of the workman is a person or a corporation. The agents of a corporation must have a principle, and its servants must have a master; and the mutual duties and liabilities between master and servant must be the same whether the master is a man, or a being existing only in contemplation of law. In the present case ordinary care and prudence may have required that workmen should have been employed to repair the cars, and remove the snow

and ice from the track, and the stockholders may have voted not to employ such workmen, or to employ a number known to be insufficient, or those known to be incompetent, and the plaintiff in the exercise of reasonable care, and without any knowledge or means of knowledge of defects in the car or track, or of the insufficiency or incompetency of the repair men, may have been injured in consequence of the action of the stockholders. In such case, although the stockholders for many purposes are not the corporation, it would not, probably, be denied that the plaintiff being injured by the gross negligence of the controlling power of the corporation could maintain this action. The declaration must therefore be held sufficient.

It is understood that the powers and duties of directors are such, that, in the general management of the business of the corporation, their negligence can be called the negligence of the corporation, in contradistinction to the negligence of its servants. Whether any other officers occupy a similar position in relation to the corporation and its servants, cannot now be decided.

Demurrer overruled.

Buffalo and Allegheny Valley Railroad.

AN ACT permitting the Buffalo and Allegheny Valley Railroad Company to extend their road, and to extend the time for building the same. Passed April 5, 1862.

The people of the State of New York, represented in Senate and Assembly, do enact as follows:

SECTION 1. The Buffalo and Allegheny Valley Railroad Company, on procuring the necessary additional subscription to the capital stock of said company as required by the general railroad law of this state, authorizing the formation of railroad companies, passed April second, one thousand eight hundred and fifty, and of the several acts amendatory thereof, may extend their road from its present termination at or near Arcade, in the county of Wyoming, to the line of the State of Pennsylvania, near Olean; and upon compliance with the next section of this act, the said company shall acquire all the rights and privileges, and be subject to the same obligations as though the said extension had been embraced in the original articles of association of the said company.

SEC. 2. Whenever the necessary additional subscription of the capital stock shall be made, which shall not be less than ten thousand dollars for every mile of road required to be constructed by such extension, and ten per cent paid thereon in good faith, and in cash, to the directors of said company, a certificate thereof containing a statement of the length of said proposed extension of the road, a copy of such subscription with the name, place of residence, and number of shares of stock each subscriber agrees to take in said company, and not embraced in the original articles of association of said company, shall be made and signed by at least three of the directors of said company, who shall endorse thereon their affidavit that the amount of stock required by this section has been in good faith subscribed, and ten per cent paid in cash thereon as aforesaid, and that it is intended in good faith to construct or to maintain and operate the said extension as a part of their road.

SEC. 3. Such certificate and affidavit may be filed in the office of the Secretary of State, who shall endorse thereon the day they are filed, and record the same in the book kept by him for the recording of articles of association of railroad corporations; and a copy of said certificate and affidavit filed and recorded in pursuance with this act or of the record thereof, and certified to be a copy by the Secretary of this State or his deputy, shall be presumptive evidence of the facts therein stated.

SEC. 4. The time for constructing said Buffalo and Allegheny Valley railroad is hereby further extended for the term of five years.

SEC. 5. This act shall take effect immediately.

Railroad Earnings--Monthly.

The earnings of the Milwaukee and Prairie du Chien Railroad in August, 1862, were	$76,162 80
Do., 1861	90,461 33
Decrease	$14,298 53
Total receipts for the year up to Aug. 31, 1862	$715,597 24
Total receipts for the year up to Aug. 31, 1861	642,627 75
Increase	$72,969 49
The earnings of the Cleveland and Pittsburg in August, 1862, were	$126,000 00
Do., 1861	85,163 00
Increase	$40,837 00

This makes the gain since Jan'ry 1, $202,000. The whole earnings of the year 1862 now promise about $1,400,000.

The earnings of the Erie Railway for August, 1862, were	$609,880 79
Do., 1861	419,009 96
Increase	$190,870 83

The approximate earnings of the Pittsburg, Fort Wayne and Chicago Railway during the month of August ultimo, compared with the same period last year, were as follows:

From—	1862.	1861.
Freights	$163,231 01	$139,369 87
Passengers	93,556 87	88,461 37
Express	2,600 00	2,700 00
Mails	7,825 00	7,825 00
Rent of railway	7,083 33	7,083 33
Miscellaneous	574 83	2,591 72
Total	$274,871 04	$248,031 29
Earnings, Jan'y 1, to July 31	1,933,828 03	1,556,850 86
Total to August 31	$2,208,699 07	$1,804,882 15

Increase for August, $26,839 75, or 10.8 per cent.
Average increase to Aug. 31, 1862, 22.4 per cent.

The earnings of the St. Louis, Alton and Chicago Railroad in August, 1862, were	$95,358 00
Do., 1861	58,600 00
Increase	$36,758 00
The earnings of the Norwich and Worcester Railroad for August, 1862, were	$38,426 16
Do., 1861	29,531 65
Increase	$8,894 51

The gain in four months over the same time in 1861 is $30,772 20.

The receipts of the Housatonic Railway Company for August, 1862, are	$26,861 10
Do., 1861	20,386 07
Increase	$6,475 63

The increase in August, 1862, was, in freight, $4,326 25, and in passengers, $2,148 78.

The Isthmus of Suez Canal.

The *Credit Minier* gives an account of the present state of the great work which is designed to connect the waters of the Mediterranean with those of the Red Sea. Fourteen dredges are employed in deepening a channel across Lake Menzalek, drawing up the mud and forming an embankment on each side six feet high. It is thought that the whole canal from one sea to the other, will be completed in 1863.

Advance in Railway Freights.

On and after the 20th inst., and until they are changed, the rates on all eastward bound freight on the Erie Railroad will be as follows, viz.:

From Lake Erie Ports	First class per 100 lbs.	Second class per 100 lbs.	Third class per 100 lbs.	Fourth class per 100 lbs.	Flour in lots of 50 bbls. and over.	Wool in bls. per 100 lbs.
To New York.	90	70	55	47½	95	80
To Boston ...	100	78	60	52½	105	90
From Buffalo						
To New York.	75	60	48	40	80	70
To Boston ...	85	68	53	45	90	80
From Dunkirk						
To New York.	80	63	51	41½	85	75
To Boston ...	90	71	56	47½	95	85

On all freight coming from beyond the points named these rates will be charged on and after the date specified above, without regard to date of contract, "bill of lading," or contract price, and no abatement will be made or overcharge refunded on property in transit or in store, on or prior to the 20th inst.

Very respectfully yours,
B. W. BLANCHARD, General Freight Agent.

Detroit and Milwaukee Railroad.

A meeting of first and second mortgage bondholders of this company was recently held at the office of Messrs. Ashurst, Son and Morris, Old Jewry, London, Eng., for the purpose of receiving and considering the report of the bondholders' committee; Mr. Dillon was voted to the chair.

The CHAIRMAN explained that the bondholders had already funded five half-years' dividends. The fifth was due in November last; the sixth, due in May, was not funded, and they were asked to fund those coupons with others falling due in November next, and in May, 1863. The committee said they would do so provided they were allowed to take out a decree for a friendly foreclosure, with the understanding that it should be held over until November, 1863, and it appeared the Board of the Detroit and Milwaukee Company had assented to that proposition, but they were surprised to find that the Board of the Great Western of Canada would oppose that arrangement. He concluded by moving resolutions to the following effect:—

"That the meeting had learned with regret that the Board of the Great Western of Canada dissented from the agreement made with the Board of the Detroit and Milwaukee Railway Company, as mentioned in the report of the bondholders' committee, whereby the coupons for another year would have been funded as desired by the company, while the bondholders would have been in a position to enforce, if necessary, at the end of the year their rights as mortgagees without delay and expense; that the committee be requested to take all necessary steps to enforce the legal rights of the first and second bondholders in default of payment of the coupons which would be due in November next, unless in the meantime arrangements could be made satisfactory to the committee for carrying out the recommendation contained in the report; that the bondholders be invited to send their coupons due in November next to the committee with full authority to enforce or fund the same; that all expenses incurred by the committee be paid *pro rata* out of any moneys which might be received by the contemplated proceedings; and under the circumstances it was not advisable to entertain the scheme which had been proposed for the re-organization of the company."

Mr. Starling seconded the resolutions.

Mr. Morris explained the legal position of the bondholders, and also the position of the Great Western of Canada in respect of the Detroit and

Milwaukee Company; and after some observations from Mr. Austin, Mr. Quilter, and other bondholders, the resolutions were carried unanimously; and the proceedings concluded with a vote of thanks to the chairman.

The Necessary Conditions to National Unity.

The key-note of modern diplomacy is *interest*. All political questions, in fact, turn upon the same pivot. The object of all political organizations is fast coming to be the material well-being of society. No community can be long one, except where such interests are harmoniously adjusted, no matter how perfect may be all other conditions to complete unity.

It was a fancied conflict of interests that led to the rupture between the North and South. Differences in the social structure of the two sections necessarily placed them upon separate stand points. The North is now harmonious in its sentiments and ideas. The question deserving the greatest consideration is how can such harmony be maintained.

There is but one way—to superadd the tie of interest. This can only be done by works that shall give the highest possible value to the products of the industry of each section.

Such works already exist upon a scale never before executed or attempted. The great Lakes are connected with tide water by a canal having a depth of seven feet, with locks passing boats of 250 tons burdens. The canal descends for nearly its whole length toward the sea, so that but little is lost in rising above, or falling below an uniform plane. The capacity of this canal, in each direction is something like 5,000,000 tons. Such capacity, however, is already more than one-half reached. It would be exceeded but for the enormous tonnage of numerous and competing railroads, whose aggregate traffics are still larger than that of the canal. But capacious as this work is, the same necessity exists for quadrupling this capacity, as a means of reducing the present cost of transportation, that there was for the construction of the original work. No one can go west or to Chicago, even, and not be struck with the entire inadequacy of all the outlets yet provided for their teeming productiveness and commerce. He sees in the Western States the remarkable phenomenon of a capacity for the immediate and unlimited production of the cereals in ratio to the amount of capital and labor employed. Every country has its peculiar excellence or gift. France has that of wine; Italy, of silks; and England, of ironand coal. With entire freedom of trade each would enjoy a complete monopoly of production in what it excelled. In the same way, the valley of the Upper Mississippi has the gift of *food*. In cheapness of production England might as well attempt to compete with Cuba in the culture of sugar, as with Illinois in the production of wheat and Indian corn. Wheat there can be grown at a profit for 50 cents per bushel; while the market value of corn in very large sections of the State the past year, has been only ten cents per bushel. Every one of the 36,000,000 acres in the State may be said to be arable land, and every one in the highest degree fertile. Of course considerable areas are occupied by villages and cities; but if we estimate those applicable to farming at 30,000,000 of acres, their productive capacity in Indian corn, at 40 bushels per acre, would be 1,200,000,000 bushels, and 600,000,000 bushels in wheat, at 20 bushels to the acre. Of course the large extent stated cannot all be devoted to the two great crops of the State. Certain portions must be set apart for others, and for pasturage. With 15,000,000 acres, or less than one-half the area of the State, devoted to wheat and corn, the product would be 600,000,000 bushels of the latter, and 300,000,000 bushels of the former. We shall not have to go far to find much greater areas which can be exclusively devoted to these crops. Iowa on the same belt of latitude with Illinois has nearly an equal surface, and is equally fertile and productive. Wisconsin, which has as large a territory is perhaps better adapted to the culture of wheat. So are Michigan and Minnesota. Ohio, Indiana, and Northern Missouri are capable of producing, under a higher culture to be sure, as much per acre as Illinois. The aggregate area of these States embracing only the Northern portion of Missouri, is fully 400,000 square miles, or 256,000,000 acres, to which may be added at least 100,000 square miles in the State of Kansas, and the territory of Nebraska and Decotah, which are only just beginning to be occupied by the advancing wave of human life in its grand march across the continent, but which will soon become densely settled States, provided a market can be had for the products of their soil. Adding these, the aggregate would be 500,000 square miles, or 320,000,000 acres, whose products must be provided with outlets by way of the great Lakes.

The peculiarity of the Prairie States consists in the applicability of labor-saving machines to agriculture, to prepare the soil for, and gather and secure the very first harvest raised. The soil of all is homogeneous in its character, more friable, naturally, than other soils can be made by the most patient and expensive culture, and has only to be turned over, to produce, year after year, the most abundant crops. Those of wheat, grass and oats are cut by machines with no more difficulty, the first, than succeeding years. These machines so abridge labor, that if a sufficient demand should exist, or what amounts to the same thing, could cost of transportation to a market be so reduced as to add 50 per cent to the value of the products, 500,000,000 bushels of corn could or would be raised in the West for exportation, as readily as 20,000,000 or 30,000,000 now are. The product of wheat would be increased in a similar ratio. The question is simply one of demand, or price. Capital united with labor can meet any possible demand, immediately, almost, just as the iron mines of England could easily meet any demand upon them. The difference in favor of the West is in the fact that, in Illinois for example, a year only would be required to double the crops, while many would be required, with the greatest stimulus of prices, to double the make of iron in England. The Prairie States are all ready for the plough, while their fertility is the work of all time. It requires nearly two generations to clear a heavily wooded country, like New York, and to prepare its soil for the use of labor-saving machines. A timber country always requires a large amount of draining, and mixtures of soils, to render it highly productive, for the reason that the subsoil is either clay, or compact gravel or marl. The open soil of the prairies possesses all the conditions for self-drainage. The absence of forests upon them is owing to the fact that the soil is not compact enough to hold the roots of trees, which are overturned by the winds.

It is in the soil of the States named that lies locked up, for want of adequate means of conveyance, a wealth far greater than that possessed by all other nations. With such, this wealth can be made immediately available. Such means on the East are the enlargement of the Erie Canal, so as to take the largest class vessels navigating the lakes. A similar work must be constructed, connecting these lakes with the Mississippi river. When completed, they would more than double the value of Western products to the growers, and would accomplish all they could wish or desire for their material advantage. Such works would unite the East and West by an indissoluble tie. They would render the lower Mississippi river entirely superfluous, even should it be opened. They would render, beyond all competition, the United States the granary of the world, and would create a dependence of other nations upon us, for food, which would be a lasting bond of peace. They would enable us to utilize our resources both East and West in the highest degree, and would supply every condition that could promote the public welfare, drawing us together in the first place by the ties of interest, which could not fail to have added to them those of mutual sympathies and congeniality in all that can unite and consolidate a people. —*Hallett's Financial Circular.*

Milwaukie and Prairie du Chein Railway.

The receipts of this road for the year up to August 31st, were $715,597 24; for the corresponding period of 1861, they were $642,627 75, an increase in eight months of $72,969 49.

The trustees give notice that the company have made the payment of $13,000 due the sinking fund, October 1, 1862, and that they have designated by lot for payment, as required by the trust deed, the following Mortgage Bonds, viz:

Numbers 16, 395, 579, 600, 662, 1,325 1,685, 1,974, 1,977, 2,037, 2,299, 2,398, 2,516, 2 517, The holders of these bonds can receive payment at par and interest on presenting them at the office of W. Schall & Co., No. 58 Exchange Place, New York. Interest on the above bonds will cease Jan. 1, 1863.

Annexed is the report of the trustees to the bondholders of the present condition of the trust:

At the organization of the Company, they were indebted to us, in trust for you, the sum of $2,556,000; of this indebtedness, there has been cancelled, previous to October 1st, 1862, $89,000.

The Company covenant to pay to us, as your Trustees, "such sum of money as will amount to the difference between $204,480, (the interest on $2 556 000 at 8 per cent,) and 7 per cent interest for each year, on the outstanding Mortgage Bonds," payable on the 1st day of April and October in each year; the first payment, $13,000, to become due October 1st, 1862.

The balance now due us, in trust for you, is $2,445,000—that is, $102,000 of said Bonds, so far as the Company is concerned, have been cancelled or their payment provided for. This amount is secured by a first and only Mortgage on all the property of the Company, (235 miles of R. R. &c.) They earned in 1861, net $436,039, gross $1,108,354.

The next payment for the Sinking Fund, due April 1, 1863, will be $16,350.

This issue of 7 per cent bonds, originally, $2,556,000, besides having the certain advantage of an accumulative sinking fund, which must absorb the whole issue by the 1st of October, 1889, is also convertible into the 8 per cent preferred stock of the Company. Each $1,000 bond thus converted, will increase the annual payment to the Sinking Fund $70.

Annual interest at 7 per cent on bonds and payments due Sinking Fund	$204,480
Amount of mortgage	2,556,00
Canceled in advance of Sinking Fund	89 000
Total	$2,467,000
Now drawn for cancelation	13,000
Leaving outstanding	$2,454,000

☞ RAILROAD COMPANIES will oblige us by sending us copies of their Reports as soon they are issued.

American Railroad Journal.

Saturday, September 20, 1862.

Stock and Money Market.

Beside our usual quotations of daily sales of stocks and other securities at the New York Stock Exchange, we give also this week a list of such sales at the Boston, Philadelphia and Baltimore boards. In addition thereto, we quote sales of Stonington at 95; Norwich and Worcester, 59¾; Concord and Portsmouth guaranteed 7 per cent., 111; Morris Canal, preferred, 116; Terre Haute and Richmond, 125; Tioga 7s, 100; Goshen Branch bonds, 101; Lackawanna and Western, 1st mortgage, 103; Sunbury and Erie 7s, 100; Schuylkill Navigation 6s, 1872, 89; Camden and Amboy 6s, 1883, 95; Bath City 6s, 102; Bangor 6s, 104; Brooklyn City water loan 106½; State of Maine 6s, 1871, 107; State of Connecticut 6s, 107. The past week has been an eventful one. The improvement in securities of all kinds has been most marked. Erie common has gone up, from 38 on Wednesday week, to 41; do., preferred from 60 to 74⅜; Michigan Central from 68⅜ to 71½; Philadelphia and Reading from 59⅛ to 61¾; Toledo and Wabash preferred from 46 to 50; Michigan Southern from 31¾ to 33⅛; Hudson River from 52 to 55; Galena and Chicago from 70¾ to 74½; Cleveland and Pittsburg from 24¾ to 27½, and so on through most of the list. In railway mortgages a large increase is also noted. Sales have been made of Hudson River, 1st mortgage at 113½; do., 2d mortgage S. F. at 110; Illinois Central bonds at 102½; Milwaukee and Prairie du Chien 1st mortgage at 98; N. Y. Central bonds of 1876 at 112; Erie 1st mortgage at 114; Pittsburgh, Ft. W. & Chicago at 98; New York & Harlem 1st mortgage, 108. At Boston, Philadelphia and Baltimore, we observe the same rate of increase. The news from the seat of war is regarded favorable. Pennsylvania has not yet been invaded; the Pennsylvania road has not been obstructed, nor is it occupied by the government to the exclusion of other business. The Baltimore and Ohio Railroad Company, notwithstanding the disruption of their business the greater part of the past year, have yet earned enough to divide 3 per cent on the stock of the Main Stem, as well as 4½ on the Washington Branch. Both are payable on the 30th inst. The earnings of most of our roads for August, show a large increase over August, 1861. For the season, the receipts have been very heavy. They will continue to increase as the season advances.

Philadelphia & Erie Railroad.

On 1st inst. the trains on this road began to run to and from North Point, 8½ miles west of Wetham and 89½ from Sunbury. This is the first instalment finished and opened under the lease of the Philadelphia & Erie R. R. by the Pennsylvania R. R. Co. By October 1, it is said, 9 miles more of new road will be opened west of North Point, reaching to Kettle Creek. On the Western Division, the track-layers on the 1st inst. began to lay track eastward from Warren; thus, from both directions, the gap in the Middle Division is being shortened, and next summer—less than a year

hence—it will be closed out, and the road will be opened intact and continuous to Erie City.

London and Port Stanley Railroad.

From the annual report of Directors of the London and Port Stanley Railroad, submitted to the shareholders at a meeting recently held in London, C. W., it appears that the total receipts from all sources during the year were $34,971 88, being an increase over last year of $1,388 59, or about four per cent. The working expenses of the road amounted to 77 per cent. of the earnings, but during the year there had been an outlay for new ties and wheels amounting to $5,769. The Directors are of opinion that some immediate steps must be taken to secure a regular line of propellers between Port Stanley and Montreal, and propositions were before the board which they hoped would result in the securing of this desirable end. On the whole the condition of the road was satisfactory, considering the almost total stoppage of trade with the United States. The stock was in general good order, and well fitted for the large fall business confidently expected.

Atlantic White Lead Co.

An establishment which may well be termed a model after its kind is that of the Atlantic White Lead Co., in Brooklyn, the office in this city being at 287 Pearl Street. The business was commenced in 1830 by Messrs. Pollen & Colgate; but about seven years ago the name of the firm was changed, by the admission of Mr. Edward Austen, to that of Robert Colgate & Co. They are one of the few firms which sell only the products of their own factory. With ample means, an intimate knowledge of every department of the business, and a reputation which has never been tarnished during the whole history of the concern, the proprietors are always prepared to supply the best articles in their line, such as white lead, dry or in oil; red lead or litherage; French oxide of zinc; linseed oil, &c. See their advertisement.

Pennsylvania Railroad.

HARRISBURG, Sept. 17, 1862.

The reports throughout the West that the Pennsylvania Railroad is obstructed by transportation of troops and government supplies, or that it has been in danger of invasion, are entirely without foundation. The road is entirely unobstructed, and doing its usual heavy transportation without detention or hindrance, and is prepared for any amount of trade that may be thrown upon it, either east bound or west bound.

Atlantic and Great Western Railway.

The London *Money Market Review*, of August 30th, says: A circular has been addressed to the bondholders of the Atlantic and Great Western Railway, in which is given the following communication from T. W. Kennard, engineer-in-chief, dated Meadville, Penn., Aug. 9th:

"All goes on well. I hope to complete to Akron and the branches to the oil wells in say two months, for I have now a large force of men. The monthly balance sheet is a much better test of the work done than the progress section, for some months, if the work is light, will make a great show. Last month we were engaged in heavy work, and thus it does not show so well as the previous month. More cubic yards, however, were removed. M. Navarro is now with me, and is, I think, perfectly satisfied with the progress made; he ought to be. I have had tremendous difficulties to contend against, and still I hope to complete the whole line during October, the month promised."

Railroad Earnings--Weekly.

The traffic of the Great Western Railway of Canada for the week ending Sept. 5th, 1862, was as follows:

Passengers	$22,860 80
Freight and live stock	22,186 14
Mails and sundries	1,303 10
	$46,350 04
Corresponding week of last year	43,706 53
Increase	$2,643 51

The receipts of the Grand Trunk Railway of Canada for the week ending August 30, 1862, were:

17,594 passengers	$22,559 50
Mails and sundries	2,933 68
Freight and live stock	34,587 29
Total	$60,080 47
Corresponding week of last year	59,714 40
Increase	$366 07

The Galena and Chicago Railroad earned the

1st week in September, 1862	$44,130 10
Do., 1861	38,308 48
Increase	$5,821 62

The Michigan Central Railroad earned in the

1st week of September, 1862	$54,512 00
Do., 1861	44,758 00
Increase	$9,754 00

The Cleveland and Toledo Railroad earned the

1st week of September, 1862	$20,558 00
Do., 1861	16,558 00
Increase	$4,000 00

The Toledo and Wabash Railroad earned the

1st week of September, 1862	$39,355 65
Do., 1861	32,114 50
Increase	$7,241 15

The earnings of the Milwaukee and Prairie du Chien Railroad for the 1st week in September,

1862, were	$27,321 65
Do., 1861	29,884 40
Decrease	$2,561 75

The Chicago and Northwestern Railroad earned in the 1st week of September, 1862...$17,941 90
Corresponding period, 1861 ... 15,071 85
Increase ... $2,870 05

Rocky Mountain and Pittsburg Gold Mining Company.

A large number of Massachusetts men, principally from New Bedford and vicinity, organized into a company known as the Rocky Mountain and Pittsburg Gold Mining Company, recently passed through Chicago en route for the gold regions, under the charge of the General Superintendent of the organization, the Hon. Rodney French. The company was incorporated in November, 1861, and has been organized as follows: President, Simeon C. Coffin, of Alleghany City, Penn. Secretary—Osias Millett, of Maine. Directors—Simeon C. Coffin; Ira Coffin, of Plymouth, N. H.; John Wetherby, jr., of Boston; Osias Millett, and Rodney French, of New Bedford. They will carry across the plains 1½ tons of quicksilver, 400 kegs of powder, and provisions for a year, thus making up some 20 teams, with about 40 pairs of oxen and 20 cows.

The company have located on South Bolder Creek, Mammoth City, Arapahoe County, Colorado Territory, about fifty miles from Denver City, the capital of the Territory. They have 242 lode-claims, 24 water-powers, and a ranch of 460 acres, some four miles from the mountains. They will erect a quartz-crushing mill of fifty stamps that will run by water-power. The machinery for the company was manufactured at Pittsburg, Pa., and is now ready for transportation.

San Paulo (Brazilian) Railway.

The report of the directors states that the progress of the enterprise continues highly satisfactory. On the 23d of July last the directors resolved, "That it be offered to the shareholders to pay up in advance of calls on such number of shares as will, at 12*l.* per share paid in advance, produce 200,000*l.*; such shares to carry interest at 7 per cent on the amount for the time being paid in advance, and on the balance, interest, or dividend as on the ordinary shares, such offer to be made rateably to the shareholders in the first instance." The advance will be made payable on the 20th of November next. The directors have no doubt that the above resolution will meet the views of all parties.

Mr. Brunlees, the engineer-in-chief, reports that about 11 miles of the permanent way have been laid on the first section of 13 miles. On the second section, 35 miles in length, the masonry in the culverts is kept well in advance of the earthworks, 40 per cent of which are completed. The works generally from the top of the Serra to San Paulo are in advance of those on the inclines. The third section, 38 miles in length, has been resurveyed, and the heavy works have been staked out. At the end of May last the number of men employed on the works was 2,850. The shipment of sleepers, bridges, sheds, &c., is being actively proceeded with, and three locomotives are on their way out.

The Minister of Public Works in his report to the Legislative Assembly at Rio, in May last, stated that the railway of the company commenced at the city of Santos, passed through that of San Paulo, and thence on as far as Jundiahy, a total length of 88 English miles. Its guaranteed capital was 2,000,000*l.* None of it was yet opened for traffic, but vigorous progress was being made, chiefly in the two first sections from Santos to San Paulo. The works across the Serra were of a heavy character, and stationary engines for working the inclines would be indispensable. The sum of 252,340*l.* had been expended during the past year in the construction of the works. The contractors, Messrs. Sharpe and Sons, were bound to deliver up the works complete in 1868. They proposed to the Government to complete the works in three years less time if paid 50,000*l.* a year for each year saved. The present traffic between Santos and Jandiahy amounted to 59,000 passengers, and 50,000 tons of goods. The present annual expenditure upon the carriage of goods and passengers was estimated at 361,256*l.*, and that which would be charged upon the same amount of traffic when the railway was finished, was estimated at 165,447*l.*, so that there would be a saving of 195,817*l.* to those persons if they adopted the new mode of conveyance. The traffic on the line, according to the estimates, would not be under the 7 per cent guarantee, which would then become nominal. He considered it advisable to come to an arrangement with the contractor for the earlier completion of the works. The capital

account showed that 899,429*l.* had been received, and 724,725*l.* expended to the 30th of June, leaving a balance of 174,704*l.*

Supply and Consumption of Cotton.

The New Orleans *Price Current*, of September 1st, furnishes the following statement of the supply and consumption of cotton in Europe and the United States, for the ten years ending with 1861:

Year.	U. States Crop.	Foreign Supply.	Total.
1852	3,015,000	739,000	3,754,000
1853	3,263,000	882,000	4,145,000
1854	2,930,000	630,000	3,560,000
1855	2,847,000	783,000	3,630,000
1856	3,529,000	843,000	4,372,000
1857	2,940,000	1,096,000	4,036,000
1858	3,114,000	925,000	4,039,000
1859	3,851,000	1,018,000	4,869,000
1860	4,676,000	884,000	5,560,000
1861	3,700,000	1,438,000	5,138,000
Total	33,865,000	9,238,000	43,103,000

	Consumption in Europe.	Consumption in U. S.	Total.
1852	3,112,000	603,000	3,715,000

1852–'53	1,664,864	41.00	68,259,424
1853–'54	1,440,779	38.00	54,749,602
1854–'55	1,284,768	40.00	51,390,720
1855–'56	1,759,293	40.00	70,371,720
1856–'57	1,513,247	57.00	86,255,079
1857–'58	1,678,616	52.50	88,127,340
1858–'59	1,774,298	53.00	92,037,794
1859–'60	2,255,448	48.50	109,389,228
1860–'61	1,849,312	50.00	92,465,600
1861–'62	38,880	45.50	1,769,040
Total 12 y'rs.	17,683,724		$812,164,533

Finances of New York.

The following are some interesting figures from the Comptroller's Report, for the year 1861, of which 5,000 copies have been ordered to be printed:

Balance on hand Dec. 31, 1860	$3,435,096 67
Receipts during 1861	16,696,698 14
Total	$20,131,794 81
Amount of payments 1861	17,333,242 43
Balance remaining in the Treasury Dec. 31, 1861	$2,798,552 38

The amount of the General Levy for 1861 was as follows:

State and County purposes	$4,914,338 88
City purposes	6,713,293 40
Total	$11,627,632 28

The following items were comprised in the expenditures on City Account, for which warrants were drawn, executed and duly registered in 1861:

Common Council & Board of Health	$4,448,568 60
Board of Education	1,300,000 00
Department of Public Charities and Correction	669,375 00
Board of Commissioners of Central Park	114,000 00

The amounts received for licenses in 1860 and 1861 was $76,510, which sum was paid by the Excise Commissioners to the County Treasurer.

The following is an interesting table of taxes on non-residents:

Year.	Valuation.	Amount of Tax.
1855	$14,491,530	$174,767 40
1856	18,601,265	257,254 70
1857	17,227,986	258,135 48
1858	12,034,532	196,200 70
1859	14,631,462	262,211 81
1860	15,121,162	256,267 84
1861	13,807,776	276,397 55

Of these taxes only about three fourths of the amounts assessed are ever realized, although the valuation of property forms part of the aggregate amount upon which the State taxes are apportioned, and are required to be paid by this County.

Atlantic and Great Western Railroad.

Two new first-class locomotives from DANFORTH, COOKE & Co., Paterson, have just been completed for the Atlantic and Great Western Railroad. They were taken over the Lake Shore Railroad and down to Ravenna, O., to lay track between that place and Meadville, Pa., the grading being ready for the rails on that section. We learn that 2,000 men are at work between Meadville and Akron. Between Corry and Meadville the track is about half completed.

☞ Alex. M. Rose, the engineer of the Victoria bridge, died in England recently in an insane asylum. He was intimately connected with the elder Stephenson. He was the resident engineer of the Conway and Menai Strait bridges with the late Robert Stephenson, and during his whole career, professionally and private, had very close relations with him.

Jamestown and Franklin Railroad.

At a meeting of the stockholders of this company held at Sheakleyville, Mercer county, on the 28th August, Dr. Wm. Gibson, of Jamestown, was elected President, and A. W. Raymond, Esq., of Franklin, Secretary. The following gentlemen were elected Directors; Thomas Hoge, James S. Myers, A. W. Raymond, S. A. Potter, T. H. Fulton, and David Hadley.

A resolution was passed by the Board of Directors authorizing an immediate survey of the line.

Union Canal Company.

At a meeting of the stockholders of the Union Canal Company, an act was accepted by which the property of the corporation, which has been in the hands of trustees since October, 1857, reverts to the company, and they are freed from all debt except their funded or first mortgage.

Valuation and Taxation in Boston.

The Assessors have concluded the valuation of the city for the year 1862, with the following result:

Amount of real and personal property in 1861	$275,760,100
In 1862	275,957,300
Gain in 1862	$197,200

There has been a loss of $4,169,700 in real estate and a larger gain in personal estate. The gain in the latter is principally from the rise in certain description of goods.

The amount of polls in 1862 is	34,038
In 1861	35,161
Loss in 1862	1,123

Amount of tax to be raised in 1862 is $2,897,-551,65, from which deduct 34,038 polls, at $2 each, and the remainder is the sum to be assessed upon the real and personal property of the city.

The per centage of taxation is fixed at 10.50 per cent. Last year it was 8.90. The rate of the city and county this year is only 8.41. The increase is in the State and direct National tax, 2.09, as the State and National tax together will amount to nearly half a million dollars.

☞ The Albany and Susquehanna Railroad Company are now laying down the rails for their road in Albany, from the dock up Gansevoort st.

Railways in Algeria.

The inauguration of the railway from Algiers to Blidah took place on the 15th, according to previous announcement. At half past seven in the morning the train of honor left Algiers with Marshal the Duke de Malakoff, General de Martimprey, and others of the superior military and civil authorities, and arrived in due time at Blidah, the station at which place was handsomely fitted up for the occasion, and where an immense crowd of Arabs had assembled. The Governor, on alighting, was received by the Mayor of the place, who made an appropriate speech, which was replied to by the Marshal in suitable terms. A *Te Deum* was afterwards sung in the church, although the building is not yet completely finished. After the mass the Marshal and a numerous party went to the Olive Garden, where a splendid luncheon was prepared under the trees, M. Bosland, Vice President of the Board of Directors of the Railway Company, proposed a toast to the prosperity of the colony and to the health of the Governor General, which was drunk with loud applause, and in which the Duke de Malakoff replied in expressions which were received with loud cheers. The guests returned to Algiers in the afternoon.

Agricultural College Act.

AN ACT donating lands to the several States and Territories which may provide Colleges for the benefit of Agriculture and the Mechanic Arts.

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That there be granted to the several States, for the purpose hereinafter mentioned, an amount of public land, to be appropriated to each State a quantity equal to thirty thousand acres for each Senator and Representative in Congress to which the States are respectively entitled by the apportionment under the census of 1860; provided, that no mineral lands shall be selected or purchased under the provisions of this act.

SEC. 2. And be it further enacted, That the land aforesaid, after being surveyed, shall be apportioned to the several States in sections or subdivisions of sections, not less than one-quarter of a section; and whenever there are public lands in a State subject to sale at private entry at one dollar and twenty-five cents per acre, the quantity to which said State shall be entitled shall be selected from such lands within the limits of such State, and the Secretary of the Interior is hereby directed to issue to each of the States in which there is not the quantity of public lands subject to sale at private entry at one dollar and twenty-five cents per acre, to which said State may be entitled under the provisions of this act, land scrip to the amount in acres for the deficiency in its distributive share; said scrip to be sold by said States and the proceeds thereof applied to the uses and purposes prescribed in this act, and for no other use or purpose whatsoever: provided, that in no case shall any State to which land scrip may thus be issued be allowed to locate the same within the limits of any other State, or of any Territory of the United States, but their assignees may thus locate said land scrip upon any of the unappropriated lands of the United States subject to sale at private entry at one dollar and twenty-five cents or less per acre: And provided further, that no more than one million acres shall be located by such assignees in any one of the States: And provided further, that no such location shall be made before one year from the passage of this act.

SEC. 3. And be it further enacted, That all the expenditures of management, superintendence and taxes from date of selection of said lands, previous to their sales, and all expenses incurred in the management and disbursement of the moneys which may be received therefrom, shall be paid by the States to which they may belong out of the treasury of said States, so that the entire proceeds of the sale of said lands shall be applied without any diminution whatever to the purposes hereinafter mentioned.

SEC. 4. And be it further enacted, That all monies derived from the sale of the lands aforesaid by the States to which the lands are apportioned, and from the sales of land scrips hereinbefore provided for, shall be invested in stocks of the United States, or of the States, or some other safe stocks, yielding not less than five per cent. upon the par value of said stocks; and that the moneys so invested shall constitute a perpetual fund, the capital of which shall remain forever undiminished, (except so far as may be provided in section fifth of this act,) and the interest of which shall be inviolably appropriated, by each State which may take and claim the benefit of this act, to the endowment, support and maintenance of at least one college, where the leading object shall be, without excluding other scientific and classical studies, and including military tactics, to teach such branches of learning as are related to agriculture and the mechanic arts, in such manner as the legislatures of the States may respectively prescribe, in order to promote the liberal and practical education of the industrial classes in the several pursuits and professions in life.

SEC. 5. And be it further enacted, That the grant of land and land scrip hereby authorized shall be made on the following conditions, to which, as well as to the provisions hereinbefore contained, the previous assent of the several States shall be signified by legislative acts:

First. If any portion of the fund invested, as provided by the foregoing section, or any portion of the interest thereon, shall, by any action or contingency, be diminished or lost, it shall be replaced by the State to which it belongs, so that the capital of the fund shall remain forever undiminished; and the annual interest shall be regularly applied without diminution to the purposes mentioned in the fourth section of this act, except that a sum, not exceeding ten per cent. upon the amount received by any State under the provisions of this act, may be expended for the purchase of lands for sites or experimental farms, whenever authorized by the respective Legislatures of said States.

Second. No portion of said fund, nor the interest thereon, shall be applied, directly or indirectly, under any pretence whatever, to the purchase, erection, preservation, or repair of any building or buildings.

Third. Any State which may take and claim the benefit of the provisions of this act shall provide, within five years, at least not less than one college, as described in the fourth section of this act, or the grant to such State shall cease; and said State shall be bound to pay the United States the amount received of any lands previously sold, and that the title to purchasers under the State shall be valid.

Fourth. An annual report shall be made regarding the progress of each college, recording any improvements and experiments made, with their costs and results, and such other matters, including State industrial and economical statistics as may be supposed useful; one copy of which shall be transmitted by mail free, by each, to all the other colleges which may be endowed under the provisions of this act, and also one copy to the Secretary of the Interior.

Fifth. When lands shall be selected from those which have been raised to double the minimum price, in consequence of railroad grants, they shall be computed to the States at the maximum price, and the number of acres proportionally diminished.

Sixth. No State while in a condition of rebellion or insurrection to the Government of the United States shall be entitled to the benefit of this act.

Seventh. No State shall be entitled to the benefits of this act unless it shall express its acceptance thereof by its Legislature within two years from the date of its approval by the President.

SEC. 6. And be it further enacted, that land scrip issued under the provisions of this act shall not be subject to location until after the first day of January, 1863.

SEC. 7. And be it further enacted, that the land officers shall receive the same fees for locating land scrip issued under the provisions of this act, as is now allowed for the location of military bounty land warrants under existing laws; provided, their maximum compensation shall not be thereby increased.

SEC. 8. And be it further enacted, that the Governors of the several States to which scrip shall be issued under this act, shall be required to report annually to Congress all sales made of such scrip, until the whole shall be disposed of, the amount received for the same, and what appropriation has been made of the proceeds.

Approved, July 2, 1862.

Railways in India.

It appears that works have been sanctioned to the extent of £57,500,000, of which £53,500,000 has received a guarantee of interest (the remainder will be guaranteed as required), that £43,000,000 had been raised at the commencement of this rapidly advancing summer, and that £40,600,000 had been expended. The amount now estimated to be required for each undertaking as at present sanctioned, is as follows:—East Indian—main line —£20,750,000; Jubbulpore line, £2,250,000; Great Indian Peninsula, £12,000,000; Madras—main line and Bellary line, £8,500,000; Scinde, £1,600,000; Punjaub—Moulton to Umritser, £2,-500,000; Delhi to Lahore, £3,000,000; Indus Flotilla, £400,000; Bombay, Baroda and Central India, £4,000,000; Eastern Bengal, £1,500,000; Calcutta and South Eastern, £380,000; and Great Southern of India, £640,000:—in all, 57,520,000. Of this respectable amount, the total raised in England to April 30, 1862, and in India at the date of the latest advices was as follows:

	Raised in England. Shares.	Debentures.	Raised in India.
EAST INDIAN:			
Main Line.....	£10,889,515	£6,396,859	£239,346
Jubbulpore....	1,952,135	.....	7,635
Gr't Indian Peninsula.....	7,575,159	1,500,000	448,740
MADRAS:			
Main Line- Bellary Line....	3,968,147	2,000,000	.....
Scinde.....	1,114,615	330,700	22,138
PUNJAB, &c.:			
Moulton to Umritser.....	1,284,089	.....	5,819
Indus Flotilla..	249,755	83,000	.....
Bombay, Baroda and Central India....	1,862,079	789.690	21,662
Eastern Bengal.	990,223	400,000	9,449
Calcutta and S. Eastern.....	230,338	90,000	19,258
Great Southern of India.....	417,319	166,000	1,220
Total.....	£30,533,374	11,756,249	775,267

Assuming that the present network of lines is completed for the estimate of £57,500,000, the average cost per mile would be £12,360; but a double line of rails will, in some places, be found necessary to meet the requirements of the traffic, and the same reason will probably be adduced—all the more to the satisfaction of our home mechanical establishments—as justifying the purchase of additional rolling stock and engines. These causes for the expenditure of increased capital would, of course, produce an immediate augmentation in the receipts; but at present all is conjecture, and nothing definite upon the subject. The average cost per mile of each undertaking, as at present estimated, is shown in the annexed figures, but the calculation will probably be modified by subsequent events, so as to bring up the total outlay to £60,000,000, or £13,000 per mile:

Lines.	Length. Miles.	Total cost.	Cost per mile.
East Indian.....	1,364	£23,000,000	£16,862
Great Indian Peninsula.....	1,266	12,000,000	9,475
Madras.....	850	8,500,000	10,000
Bombay, Baroda, &c.	310	4,000,000	12,900
Scinde.....	114	1,600,000	14,000
Punjab.....	252	2,500,000	10,000
Delhi and Punjab...	280	3,000,000	10,700
Eastern Bengal.....	110	1,500,000	13,363
Great Southern.....	78½	600,000	8,000
Calcutta and South Eastern.....	29	380,000	13,450
Total.....	4,653½	£57,520,000	£12,367

about £40,600,000 had been expended at the close of the financial year, ending April 30, 1862, leaving nearly £17,000,000 still to be disbursed. It is considered, however, that the expenditure in 1862-3 will be larger than in any subsequent twelve months, as it will amount to £7,100,000 leaving only £9,000,000, or £11,000,000 to be afterwards laid out. This latter sum will, it is expected, be spread over the next few years in the following proportions:—1863-4, £4,500,000; 1864-5, £2,500,000; 1865-6, £2,000,000; 1866-7, £1,-000,000; 1867-8, £500,000; 1868-9, £500,000. On an average about a fifth or sixth of these sums will be spent in England, so that the demand for rails and plants will progressively decline on the lapse of the year now running out, unless, as we strongly incline to think, will be the case, the railways now on hand demonstrate the utility and involve the necessity of numbers of branch lines.

It is the credit of the Cannon-row guarantee which has achieved the great results attained. Without the promise of five per cent, India would have looked in vain to England for railways for many a year to come, although probably she would have obtained them some time or other. The Indian Government in stepping in with its tolerably secure five per cent has done its best to accelerate the material progress of the territories under its *raj*; and sooner or later it will doubtless reap a return. At present the interest account stands thus. The government has paid six millions and a quarter, while the profits of the companies which have been applied in reduction of the guarantee only amount to one million and a quarter, leaving an excess which is recoverable by the Government from half the net receipts in excess of five per cent. If no compound interest is calculated the Government may yet re-coup itself, but otherwise it would be hopeless to expect such a result. Whether every shilling, however, finds its way back to the Imperial Treasury or not, the Government will, doubtless, reap the benefit of its wise enterprise in the development of the resources of the Indian Empire, and the increased facilities obtained for the reducement of troops &c. To be more precise upon this interest account let us append the following figures:

Company.	Interest paid to. Dec. 31, 1860.	Interest paid in 1861.
East Indian.....	£2,470,506	£815,081
Great Indian Peninsula.....	1,040,357	322,907
Madras.....	667,519	894,204
Scinde.....	134,127	66,257
Punjab.....	54,192	46,267
Indus Flotilla.....	17,403	12,718
Bombay, Baroda, &c.....	181,623	104,322
Eastern Bengal....	41,016	34,711
Calcutta and South Eastern.....	9,225	11,389
Great Southern....	110,004	19,553

The total sum paid in the shape of interest to

December 31, 1861, was consequently £6,286,895, and the total amount now due from the Government for interest is upwards of £2,000,000 per annum. The annual earnings of the railways so far as they had been brought into operation at the period to which the latest accounts extend, did not amount to a sixth of this sum; but it is only right to bear in mind that a great portion of the capital to which the guarantee applies is still completely unproductive. The mileage which has been yielding a profit does not represent half the capital which has been expended; and traffic has been carried hitherto on very imperfect and undeveloped sections. That matters have a steady tendency to improve will be seen from the annexed tables:

East Indian R. R.	Miles open.	Net profit.
Six months ending Dec. 31, 1854	39	£ 2,000
" June 30, 1855	121	12,000
" Dec. 31, 1855	121	21,000
" June 30, 1856	121	28,000
" Dec. 31, 1856	121	29,000
" June 30, 1857	121	41,000
" Dec. 31, 1857	121	42,000
" June 30, 1858	121	48,000
" Dec. 31, 1858	142	45,000
" June 30, 1859	142	68,000
" Dec. 31, 1859	202	80,000
" June 30, 1860	372	92,000
" Dec. 31, 1860	372	82,000
" June 30, 1861	372	130,000
Great Indian Peninsula Railway.		
Six months ending Dec. 31, 1853	35	£ 2,000
" June 30, 1854	35	3,000
" Dec. 31, 1854	35	1,000
" June 30, 1855	35	1,000
" Dec. 31, 1855	43	1,000
" June 30, 1856	60	6,000
" Dec. 31, 1856	88	11,000
" June 30, 1857	88	16,000
" Dec. 31, 1857	90	18,000
" June 30, 1858	90	23,000
" Dec. 31, 1858	165	32,000
" June 30, 1859	165	48,000
" Dec. 31, 1859	194	34,000
" June 30, 1860	277	42,000
" Dec. 31, 1860	277	34,000
" June 30, 1861	330	36,000
Madras Railway.		
Six months ending Dec. 31, 1856	65	£ 4,000
" June 30, 1857	70	6,000
" Dec. 31, 1857	81	9,000
" June 30, 1858	84	10,000
" Dec. 31, 1858	90	9,000
" June 30, 1859	90	8,000
" Dec. 31, 1859	96	14,000
" June 30, 1860	122	13,000
" Dec. 31, 1860	137	8,000
" June 30, 1861	211	12,000

The total profits, therefore, applicable in reduction of the 5 per cent guarantee, were as follows, during the eight and a half years ending June 30, 1861:

Year.	Total profits.	Year.	Total profits.
1853	£ 2,000	1858	£167,000
1854	6,000	1859	252,000
1855	35,000	1860	271,000
1856	78,000	1861 (half year)	178,000
1857	132,000		

It is clear that the East Indian is rapidly becoming a flourishing undertaking; even on its own merits, its working expenses having been brought within the very fair proportion of 44.61 per cent of the receipts in the year ending June 30, 1861, as compared with 50.91 per cent in the previous twelve months. The great Indian Peninsula does not, in this respect, appear in so favorable a light, the working charges having amounted to 41.1 per cent of the receipts in 1858-9, 58.7 per cent in 1859-60, and 69.5 per cent in 1860-1. The Madras did still worse, the working charges having been 66.1 per cent of the receipts in 1858-9, 61.2 per cent in 1859-60, and 78.0 per cent in 1860-1. This result is probably to be attributed to the fact that in the case of the Great Indian Peninsula and the Madras, the sections completed have been opened very quickly of late, while those of the East Indian have had more time to solidify, as it were. The tables which we have compiled, and which only give the rough results in round figures, have been based on some very ingenious diagrams prepared by Colonel W. E. Baker, now a member of the Indian Council, and formerly consulting engineer to the Government of India in the railway department. They only extend, however, to June 30, 1861; and as the subject is one of considerable importance and interest, we propose to devote another article to it, and to show in more recent, extended, and minute detail, the progress attained in respect to traffic and working results. We may add, however, one other observation here, viz: that the East Indian system is now fairly earning, *per se*, 1½ per cent on the capital expended, even although it is at present in only imperfect operation. When all the gaps are filled up and the capital expended is carried to £23,000,000, the traffic may be expected to show a much larger increase, and to cover—at any rate to the extent of three or four per cent—the interest properly accruing on the outlay made.—*London Colliery Guardian, Aug. 23.*

Chicago Loan and Financial Condition.

The city of Chicago has recently effected a loan of $200,000 on bonds bearing seven per cent, interest, at prices ranging above par. The entire funded debt of the city on the 9th of April last, amounted to nine hundred and forty-five thousand dollars, as follows:

Bonds at				
10 per cent	interest	due	January, 1863 ..	$2,000
10 "	"	"	January, 1868 ..	2,000
7 "	"	"	January, 1866 ..	10,000
7 "	"	"	January, 1874 ..	50,000
7 "	"	"	April, 1881	511,000
6 "	"	"	January, 1863 ..	60,000
6 "	"	"	January, 1867 ..	10,000
6 "	"	"	July, 1873	50,000
6 "	"	"	January, 1874 ..	40,000
6 "	"	"	July, 1875	100,000
6 "	"	"	July, 1876	100,000
Total				$945,000

Steam Boiler Explosions.

At the last ordinary monthly meeting of the Executive Committee of the Association for the prevention of Steam Boiler Explosions, Manchester, Eng., held May 27th, 1862, Mr. L. E. Fletcher, Chief Engineer, presented his monthly report, of which the following is an abstract:—

During the last month there have been examined 316 engines and 464 boilers. Of the latter, 9 have been examined specially, 10 internally, 74 thoroughly, and 371 externally; in which the following defects have been found:—Fracture, 6 (3 dangerous); corrosion, 50 (7 dangerous); safety-valves out of order, 6; water gauges, ditto, 15; pressure-gauges, ditto, 5; feed apparatus, 1 (dangerous); blow-off cocks, ditto, 34 (2 dangerous); fusible plugs, ditto, 6; furnaces out of shape, 6—total, 129 (13 dangerous). Boilers without glass water gauges, 29; without pressure-gauges, 10; without blow-off cocks, 34; without back pressure-valves, 33.

Explosions continue to occur to every description of boiler. One has happened during the last month to a locomotive in the vicinity of London, and another to a stationary boiler on the Clyde. Both of these were—as it is hardly necessary to State—beyond the sphere of the operations of the Association. Each of these explosions was attended with fatal consequences, but I am not at present in possession of the engineering facts.

The recent very frequent occurrence of explosions has monopolized, by the bare recital of their details, the entire space of the late reports, and left no room for considerations resulting from them, to which I think it is important attention should be drawn, and this, therefore, I now propose to do.

It will be remembered that one of the late explosions arose from the failure of an angle iron, on which alone—as on a single thread—a large crown plate depended for its support. Several other explosions occurred to externally-fired boilers through failure of the plates just at the seam of rivets exposed to the flame. In some of such cases the plate is found to crack at the rivet holes; in others leakage occurs, from which corrosive action sets in, and steadily continues until the plate becomes so thinned that rupture and explosion ensue. Some explosions have occurred from corrosion, consequent upon external damp; others from acidity of the water; while others again, of somewhat earlier date, have been occasioned by the collapse of the furnace tubes, consequent upon the weakness of construction, which would have been remedied by the adoption either of flanched seams, T or angle-iron hoops, or other similar means.

Thus it will be seen that all the above explosions occurred from the most simple causes, and that no mystery whatever need be attached to any one of them; while by suitable construction of the boilers in the first place, and due attention to their state of repair in the second, these explosions would in every case be prevented.

I am extremely desirous to keep this practical view of steam boiler explosions constantly in sight, since I am persuaded no head will be made against them generally so long as their causes are considered to be matters of mystery, and their occurrence one of chance.

Very few of the explosions that come under my notice occur from shortness of water, and I believe that to be a much-abused idea, and the number of explosions resulting from it to be much exaggerated. It appears to be an almost stereotyped verdict at inquests, and the boiler attendant being frequently killed, there is seldom any witness to the contrary.

I find that by far the most frequent cause of explosion is the insufficiency of the boiler for its working pressure, either on account of its original construction, or state of repair consequent upon use: while those explosions resulting either from deficiency of water, or from extraordinary or reckless pressure, are comparatively rare. In other words, to prevent misapprehension, I find that explosion is more frequently due to weakness of the boiler than to excessive pressure of the steam.

I know no means of ascertaining the sufficiency of the original construction of a boiler, or of testing the weakness produced upon it by wear and tear—in short, of testing either new or old boilers—equal to the use of hydraulic pressure, and think all steam users would do well to make systematic use of this test once a year. In France, I believe, this plan is rendered compulsory by the government, and it would be well were it generally adopted in this country voluntarily. Weak places in the plates may pass undetected, even on careful examination, while some parts may be inaccessible and concealed from view, but the hydraulic test is sure to detect and expose them all. Its timely application would have saved that most disastrous explosion which occurred some time since, here in Manchester, at a locomotive establishment second to none in the kingdom for its high reputation, and since a defect passed unnoticed at such an establishment, where the construction of boilers, as well as the quality and strength of the plates, may well be supposed to have been thoroughly understood, it surely argues the necessity of the hydraulic test being applied.

Mr. Muntz, a steam user in Birmingham, states, in a letter published on the Millfield boiler explosion, that he has for years adopted, with advantage, the plan of an annual hydraulic boiler test, and considers it a duty he owes to his workmen in consideration of their safety.

The application of the hydraulic test is so simple, and the pump required so small, that each steam user could provide himself with one at very little expense, or some parties might find it worth their while to take up the proving of boilers by water pressure as an itinerant speciality of engineering practice. This Association would be glad to assist

in the general application of the hydraulic test, by inspecting the boilers when under pressure, and I feel convinced that, were the practice of this annual test generally adopted, which I trust it soon will be, explosions would become nearly, if not entirely, extinct.

TO RAILROAD MEN.

A GENTLEMAN to take the superintendence of the sale of an improvement for Railway Cars. It is already introduced on some roads, and is valuable. To one acquainted with Railroad managers, and who has influence, a large annual income may be secured.

Address—**Car Improvement Co., Box 362, Post Office, New York.** 38tf

RAILS FOR SALE.

OTTO AHLSTROM,

MANUFACTURER OF THE

LOUDON & AHLSTROM'S

PATENT EXPANSION SCREW FASTENINGS,

A QUICK and sure means of making preparatory Fastenings—The hole not requiring to be large at the bottom.

Also for ANCHORING LIGHT-HOUSES, BEACONS, BUOYS, BRIDGES, DAMS, FORTIFICATIONS, etc.

For NEWEL, GATE AND FENCE POSTS, and IRON RAILINGS in various ways.

Also, a CHEAP and ready means for fastening Iron or other ornaments (large or small) to stone or brick buildings.

For STAPLES, HINGES, AWNINGS, SIGNS, SHUTTER FASTENERS, LEADER HOOKS, etc.

For INSIDE WORK, such as for fastening articles to Hard Walls, Marble, etc., without hammering or using lead. For fastening Marble Tops to Furniture, etc. They are also so constructed as to be applied in Wood.

For LIFTING PURPOSES, such as Foundrymen's Tools for raising their patterns of wood or metal from the sand. They may be used in tapped or smooth holes.

Orders promptly executed by

OTTO AHLSTROM,
22nd St., 2nd Avenue, N. Y.

Messrs. MUNN & CO.,

PROPRIETORS OF THE SCIENTIFIC AMERICAN continue to solicit patents in the United States and all foreign countries, on the most reasonable terms. They also attend to various other departments of business pertaining to patents, such as Extensions, Appeals to United States Courts, Interferences, Opinions relative to Infringements, etc. The long experience Messrs. MUNN & CO. have had in preparing specifications and drawings, extending over a period of sixteen years, has rendered their perfectly conversant with the mode of doing business at the United States Patent Office, and with the greater part of the inventions which have been patented. Information concerning the patentability of inventions is freely given, without charge, on sending a model or drawing and description to this office.

Consultations may be had with the firm between 9 and 4 o'clock, daily, at their principal office, No. 37 Park Row, New York. We have also a branch office in the city of Washington, on the corner of F and 7th sts., opposite the United States Patent Office. This office is under the general superintendence of one of the firm, and is in daily communication with the principal office in New York, and personal attention will be given at the Patent Office to all such cases as may require it. Inventors and others who may visit Washington, having business in the Patent Offices, are cordially invited to call at their office.

MUNN & CO., are very extensively engaged in the preparation and securing of Patents in the various European countries. For the transaction of this business they have offices at Nos. 66 Chancery Lane, London, 29 Boulevard St. Martin, Paris, and 26 Rue des Eperonniers, Brussels. Probably three-fourths of all the European Patents secured to American citizens are procured through this Agency.

A pamphlet of information concerning the proper course to be pursued in obtaining Patents, the requirements of the Patent Office, etc., may be had gratis upon application at the Principal Office, or either of the Branches. They also furnish a Circular of information about Foreign Patents.

During the last sixteen years the business of procuring Patents for new inventions in the United States, and all foreign countries has been conducted by Messrs. MUNN & CO., in connection with the publication of the SCIENTIFIC AMERICAN; and, as an evidence of the confidence reposed in them by the inventors throughout the country, we would state that we have acted as agents for more than FIFTEEN THOUSAND Inventors! In fact, they have become identified with the whole brotherhood of Inventors and Patentees, at home and abroad. We would state that we never had a more efficient corps of Draftsmen and Specification Writers than are employed at present in our extensive Offices, and we are prepared to attend to Patent business of all kinds, in the quickest time and on the most liberal terms.

Communications and remittances should be addressed to

PROPOSALS
FOR $250,000 OF THE CROTON WATER STOCK OF THE CITY OF NEW YORK.

SEALED proposals will be received at the Comptroller's Office, until THURSDAY, September 25th, 1862, at two o'clock P. M., when the same will be publicly opened for the whole or any part of the sum of two hundred and fifty thousand dollars ($250,000) of the Croton water stock of the City of New York, authorized by Chapter 372 of the laws of 1860, and as amended by Chapter 181 of the laws of 1861, and by an ordinance of the Common Council, approved by the Mayor October 4, 1861, for increasing the supply of Croton water, etc.

The said stock will bear interest at the rate of six per cent. per annum, payable quarter-yearly, and the principal will be redeemed November 1, 1883.

The proposals will state the amount of stock desired, and the price per one hundred dollars thereof, and the persons whose proposals are accepted will be required to deposit with the Chamberlain of the City, within ten days after the opening of the bids, the sum awarded to them respectively.

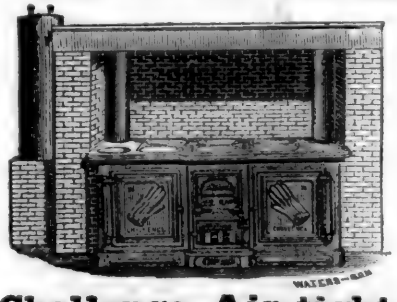
On presenting to the Comptroller the receipts of the Chamberlain for such deposits, the parties will be entitled to receive certificates for equal amounts of the par value of the stock, bearing interest from the date of payments.

Each proposition should be sealed and endorsed "Proposals for Croton Water Stock of the City of New York," and the same inclosed in a second envelope, addressed to the Comptroller.

The right is reserved to reject any or all of the bids, if considered necessary, to protect or promote the interests of the City.

ROBERT T. HAWS, Comptroller.

CITY OF NEW YORK, DEPARTMENT OF FINANCE, COMPTROLLER'S OFFICE, Aug. 26, 1862. 3t35



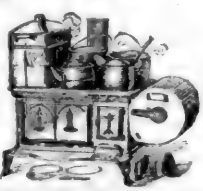
THE NEW YORK CENTRAL RAILROAD COMPANY, TREASURER'S OFFICE, ALBANY, July 19, 1862.

EIGHTEENTH SEMI-ANNUAL DIVIDEND.—The Directors of this Company have declared a Semi-annual Dividend of Three per cent. on the Capital Stock thereof,—free of the United States Income Tax, which will also be paid by the Company—payable on the 20th day of August next, upon stock registered at New York, Boston and Albany, and on the 20th day of September next upon stock registered at London.

Stockholders whose stock is registered at New York, will receive their Dividends at the office of DUNCAN, SHERMAN & CO.; those whose stock is registered at Boston, at the office of J. E. THAYER & BROTHER; those whose stock is registered at Albany, at the ALBANY CITY BANK; those whose stock is registered at London, at the UNION BANK OF LONDON, the latter at the rate of 4s. 1d. to the dollar.

The Transfer Books will be closed at the close of business on Thursday, the 31st day of July inst., and will be re-opened at New York, Albany and Boston on the morning of Saturday, the 23d day of August next.

8t30 JOHN V. L. PRUYN, Treasurer.



Challenge Air-tight KITCHEN RANGES,

May be placed in a fire-place without masonry, and with or without water-back; or may be set out on feet, as an ordinary stove.

This range, already very popular, has the **LARGEST OVENS** of any in the market; BAKES PERFECTLY, never burning to brown at the bottom; BOILS, ROASTS and and BROILS with unequalled facility and dispatch, and with extraordinary **ECONOMY OF FUEL**, which may be either coal or wood. Flues large and easily cleaned. A child can manage it, so simple is its construction. Castings extra heavy, and design plain and chaste.

Four sizes, adapted to families and hotels.

Beacon Light
SUMMER AND WINTER
PORTABLE RANGE,

Is a very popular range, having six boiler holes, one large oven that bakes perfectly, with an arrangement for roasting, or heating irons at the end. It is very economical of fuel. For a FEW DOLLARS a family may be supplied with a PERFECT COOKING APPARATUS, equal to the highest price stove in the market.

Three sizes, adapted to coal, or wood.

SANFORD'S
MAMMOTH
OR
GLOBE
HEATERS.

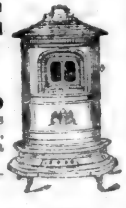
The best stoves for RAILROAD DEPOTS and SHOPS, and all places where a great heat is required. They are very durable, and very economical of coal.

Beware of imitations that are inferior in strength and in other respects.

TESTIMONIALS.

HUDSON RIVER RAILROAD OFFICE, N. Y

This Company have now in use, over two hundred of Sanford's Mammoth Heaters, in Station Houses, Work Shops, and Engine Houses; we commenced using them in 1853, and some of the first stoves put up are still good and in use. We consider them the best Heaters now in use.



J. M. HEBARD, Supply Agent.

UNION FERRY COMPANY.

The Mammoth Heaters have been used by this Company in their waiting rooms at the several ferries and found to be very excellent stoves and more durable and valuable than any heretofore used. CYRUS P. SMITH, Managing Director.

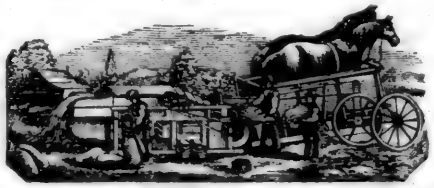
IMPORTANT
TO
RAILROAD COMPANIES,

THE ATTENTION OF
RAILROAD MANAGERS
Is called especially to the Machines manufactured especially for the use of Railroad Companies by the proprietors of the
ALBANY AGRICULTURAL WORKS,
CONSISTING OF
EMERY'S PATENT
Railway Horse Power,

Made changeable for both right and left hand work, also with changeable degrees of forces and motions of the driving Pullies without changing the Speed and Labor of the Horses, thereby adapting them to the different uses required, as Sawing Wood, Pumping Water, Driving Elevators and Machine Shops, Foundries, etc. The Power is also adjustable to any degree of wear or use, so as to always insure its working with its greatest efficiency. All the running chains in these Powers are made of the best MALLEABLE IRON which gives to them triple the strength and durability of Grey Iron which last is universally used by all other Railway Horse Power Manufacturers—thereby at the same time lessening the weight of these several hundred pounds, making them less cumbrous for handling and transportation.

WOOD SAWING MILLS.



These Sawing Mills are made upon the most approved and convenient plans in use. Having a heavy plate fly-wheel fixed to the Mandrill with a Ratchet or catch pulley for the driving band on the outside of the fly-wheel—the journal bearings are fitted with Babbet Metal—the wood carriage traverses on iron ways and gibbs—a 24 or 26 inch Saw is fitted, filed and set in working order and the plates warranted. When desired, a 14 inch saw is fitted, also a table for the purpose of slitting boards, etc., for fencing and carpenter work.

The whole together forming one of the most complete and desirable sets of machines for their purposes. They are already in very general use on nearly all the principal Railroads in this country.

PRICE, ONE HORSE POWER $90.00
" TWO " " 120.00
" SAW MILL, 24 in. Saw 37.00
SETT BANDS and EXTRAS ... 5.00

PUMPING ENGINES

Of different kinds for Raising Water for Railroad tanks and other purposes, can be furnished on demand with Reciprocating or Rotary Pumps—fitted to be operated by these Horse Power and the best adapted for Railroad and Mining purposes. One of the SEVENTY-FIVE DOLLAR PUMPING ENGINES when driven by the TWO HORSE POWER has a capacity equal to any Four or Five Horse Power Steam Engine and Pumping Machine for the same purposes.

THRESHING MACHINES

Of the most approved kinds, for one and two horses and with simply Separators, or with Complete Cleaners which fit the grain for market in one and the same operations, and of the most approved construction.

They are very extensively introduced into all the grain-growing sections of this country and the world. They are especially adapted to the force of the above Horse Powers and can be driven by Steam or Water power with equal advantage. They will be furnished on the most liberal terms and warranty.

Liberal discounts made to RAILROAD COMPANIES from the above prices, and agents solicited for the sale of their manufactures.

For further particulars see the new Illustrated and Price Catalogue of the ALBANY AGRICULTURAL WORKS, furnished gratis on application to the proprietors.

CUMBERLAND COAL.

THE BORDEN MINING COMPANY

ARE now prepared to fill orders and to make contracts for the season of 1862, for CUMBERLAND COAL, DELIVERABLE ON BOARD VESSEL AT Baltimore, Md., Alexandria, Va., or Georgetown, D. C. Purchasers may rely upon the Coal proving equal in quality to that heretofore furnished.

The Company also have the pleasure of announcing that they have completed, after two years' labor, their shaft and machinery upon their new property in the VALLEY OF GEORGE'S CREEK, and are lifting from the very heart of the Coal Basin a superior and perfect article of BITUMINOUS COAL, remarkably free from impurities of every description, and possessing qualities peculiarly adapting it to Locomotive use, and to generating steam under all circumstances. This Coal will be known in market as "BORDEN'S PIT COAL."

Our Railroad friends, and others requiring a superior Coal, will find it to their interest to give this a trial before contracting elsewhere.

THE GREAT FIRE IN TROY.

Unparalleled Triumph
OF
LILLIE'S SAFES!

The following certificates explain themselves:

TROY CITY BANK, May 21, 1862.

LEWIS LILLIE, Esq.—Dear Sir: I am sure it will give you as much pleasure to know as it does me to say, that in the recent fire of the 10th inst., which desolated our city and destroyed our Banking-house, the contents of our Bank vault, though the building itself was a heap of ruins, remained entirely unharmed. This result we attribute entirely to the fact that our old Wrought Iron Doors were, about two years since, exchanged for a set of your celebrated Chilled and Wrought Iron Doors and Frames. With the old doors, not a book or paper in the Vault could have been saved; as it is, nothing in it was even damaged, though exposed to the most intense heat.
Yours, respectfully, S. K. STOW, Cashier.

TROY, N. Y., May 14, 1862.

The undersigned, using **Lillie's Chilled and Wrought Iron Fire and Burglar Proof Safes,** at the time of the late disastrous fire in this city, would state that our safes were subjected to a severe test by fire, the heat varying in intensity, according to the locality and surroundings. The time they were exposed to the fiery ordeal, unprotected by water, varied from 24 to 72 hours. We would say that our money, papers, books, etc. were well preserved, and the Safes are suitable for further use. By comparison with Safes of other manufacture, equally exposed, we have no hesitancy in recommending Safes of Lillie's manufacture to the public on their demonstrated merit as entitled to unparalleled confidence as fire-proofs.

James Kenyon,	S. Bachelder,
S. O. Gleason,	Gates H. Barnard,
Percy & King,	W. D. Haight,
McCoy & Beadle,	Denio & Freiot,
Coon & Van Valkenburgh,	Walsh, Petit & Anthony,
S. S. McClure,	D. H. Snyder,
Ross & Smith, }	Jonathan Seaman.
Robert Green, }	

Not dug out—nothing in them.

TROY, May 19, 1862.

The undersigned had one of **Lillie's Wrought and Chilled Iron Safes,** which went through the fire of the 10th of May. The Safe was exposed to a severe fire for over 24 hours. In failing it turned on its face, and when turned up to open the doors was red-hot. The back of the lower part of the Safe (behind the books) was filled with pennies, which, in falling over, pressed against the books, and brought them directly in contact with the doors. The wrappers on the pennies were mostly good. The books were unfit for further use, but the writing on them was partially legible and could be copied.
DUSENBURY & ANTHONY.

TROY, May 19, 1862.

This is to certify that we had in our store, in this city, when it burned, one of **Lillie's Small Safes,** which was in the fire, without water on the building or Safe. Most of the valuables were removed before the fire, and therefore we were not in haste to get the Safe out of the burning ruins. Some of the papers left in the Safe were legible when taken out, but most of them were charred.
I. M. SINGER & CO.,
Per G. W. BABCOCK, Agent.

This is to certify that the undersigned had one of LILLIE'S Patent Chilled Iron Safes in their store, which was burned during the late severe fire in this city, and we are happy to state, the Safe preserved all its contents in first-rate condition. All the papers were legible, and the books will do for further use, without even rebinding.
GRANT, NUTTING & CO.

The foregoing comprises all the Safes of my manufacture that were in the fire, and below will be found certificates from all the owners of Safes manufactured several years since, by World's Safe Company, who used my Patent Chilled Iron Shell, but not my Fire-Proof Cement.

WORLD'S SAFE COMPANY'S SAFES.

TROY, May 19, 1862.

The undersigned, having Safes manufactured by the late World's Safe Company, and which were subjected to the great fire of the 10th inst., in this city, would state that our Safes were exposed to a severe heat, being confined in the burning ruins, unprotected by water, from one to three days. On opening the Safes the contents were mostly legible, and to a far greater extent than could be reasonably expected of any Safe. We concur in the opinion that the Safes manufactured by LEWIS LILLIE, which were subjected to the fire for a longer time and preserved their contents, are superior and powerful protectors against fire, and by this test we are prepared to recommend them as such to public patronage.

Lyman Bennett,	Silliman, Matthews & Co.,
Flood & Dunham,	E. L. Mallory,
John Hutchinson,	E. H. Virgil,
Sup't National Express Co.	

The undersigned, having Safes manufactured by the late World's Safe Company, and which were subjected to the great fire in this city, would state, that on opening our Safes the contents were mostly legible. We concur in the opinion that the Safes manufactured by LEWIS LILLIE, which were subjected to the fire for a longer time and preserved their contents, are superior and powerful protectives against fire, and we are happy to recommend them to public patronage.
W. & L. E. GURLEY,
R. L. & G. DRAKE,
LEONARD SMITH,
H. E. & W. ALENDORPH, Absent.

TROY, May 19, 1862.

To whom it may concern: We wou'd certify that when the recent fire broke out in this city, we took out from our Safe (which was made by World's Safe Company) all our books, papers, etc., and then left it to the flames without shutting the door, and the Safe will do for further use by being repaired, although the book case was destroyed by the door being left open through the fire.
ACKLEY & CO.

TROY, May 19, 1862.

The undersigned, using Safes manufactured by the World's Safe Company, at the time of the late disastrous fire on the 10th instant, in this city, would state that our Safes were filled with fire-brick for the fire-proof, and while several of this class preserved their contents, ours were considerably charred, and only part legible. In justice to Mr. LEWIS LILLIE, we are pleased to state that Safes of his manufacture proved to be powerful protectors against fire, and have preserved their contents, after having been exposed to the fiery ordeal, unprotected by water, from one to three days.

Stephen Holton,	Luther Greenman,
Bennett, Strickland & Fellows,	E. W. Johnson,
Corless & House,	J. H. Goodsell.

TROY, N. Y., May 17, 1862.

LEWIS LILLIE—Dear Sir: We were using at the time of the late severe fire of 10th inst., a Safe purchased in 1852 of the late World's Safe Company. The contents were considerably charred, but our Ledger is mostly legible, and we are able to copy it.
The Safe was subjected to a severe heat for over eighteen hours, and we are satisfied that if water had been thrown on the ruins, as is ordinarily the case, the contents would have come out uninjured. You will please repair our Safe, placing in it the improvements embraced in Safes of your manufacture, and oblige
SHELDON & GREENE.

N.B.—The above Safe is believed to have damaged the contents more than any of those named in this circular.

There were only seven Sheet Iron Safes, made by Herring and others, outside of the railroad depot, that were exposed to the fire, four of which were entirely burnt out; the fifth was saved by being early cooled off by water; the remaining two were not severely tested.
LEWIS LILLIE.

American Railroad Journal.

New York, Saturday, September 27, 1862.

Pacific Railroad.

We have already given the proceedings of the Convention, recently held in Chicago, for the purpose of taking the preliminary steps in the construction of this great work. An organization of the corporation was effected, and books are speedily to be opened for subscriptions to the capital stock of the company, to the amount of $2,000,000 required by the charter as the condition to the permanent organization by the choice of directors. Upon such organization, and the construction of 40 miles of road, the company becomes entitled to the government aid of $16,000 to the mile as, well as munificent grants of lands.

The action of the government so far has been most liberal. It has met the necessities of the case as far as these could be foreseen. While the public interest demands that the conduct of the enterprize should be in hands of a company, it is evident that Government will have to supply the greater part of the means for its construction. It traverses a country without population, consequently without means. It is too much to suppose that private capital could be had in sufficient abundance for so vast a work. It is one where the interposition of Government is eminently proper, as it is a work in which every person in this country will be benefitted very nearly in ratio to his property. No way so just could be devised to provide the means as to have them supplied by the nation. All share equally in its advantages: all in its profits, if successful. The burden arising out of the enterprise, if there is to be any, should be equally borne. The action of Government, so far, was undoubtedly based upon this conviction, and it will unquestionably continue to supply the requisite means, so long as the management of the work commands its confidence and approbation.

The necessity of the work is a foregone conclusion both in a political and commercial point of view. In the absence of the means of social intercourse between the two extremes of the continent, diversities of sentiment will necessarily grow up that, in time, will refuse to be harmoniously blended under the same political system. We must connect these extremes by a ligature spanning the country, safe from interference by being within our own territory; while at the same time it will form a channel of commerce precisely adapted to the want of the two sections, and supply the means of an ample social intercourse and every condition necessary to an united nation under the same form of government and render the civilization of the Northern States coextensive with that of the continent.

The road, too, must serve as the avenue which all commercial nations must use equally with our own, making our territory their great highway. If it served only as the route of the precious metals, which have their richest deposits in countries fronting the Pacific, it would, by the time it could be constructed, have a traffic equalling in value, that of any other line of road. Our people have only begun to find the places of deposits of these metals in the vast mountain ranges that traverse our whole territory from North to South, and having an extent from East to West of more than 1,000 miles. These mountains are known to be rich in minerals for their whole extent. The treasures hid under the soil will, undoubtedly, amply compensate for the lack of agricultural wealth, so that by the time the road is completed, it will for a considerable part of its length, traverse wealthy and populous communities whose productive industries will supply an ample traffic to it. When all its sources of business are considered, the liveliest fancy can hardly paint the extent of the traffic it must of necessity command.

The nation must have the road as an instrument of military defense. It is needless to urge the defenselessness of all our Pacific possessions. With it, their position would be rendered impregnable; without it, they must remain our weakest and most salient point.

The necessity of this work has long since been felt and acknowledged, but Congress for a long time shrunk from the magnitude of the task it imposed, distracted as it was by questions of constitutional right to aid it, and by those of route. All these objections naturally gave way to clearer convictions of the necessity of the work and to a more unanimous expression upon the question of route. At its last session that body provided for the formation of a company to undertake the construction of the work and, at the same time, made liberal provision therefor. The bill provides for a loan of the bonds of Government, varying in amount from $16,000 to $48,000 per mile, according to the difficulties to be encountered in the physical features of the different portions of the route. Of the amounts granted 25 per cent. is to be retained as a condition for the faithful execution of its trust by the company. For the payment of the principal and interest arising on these bonds, the revenues arising from the use of the road by the Government are to be set apart—with the implied understanding at least, that they will meet the interest on them as it falls due.

The construction of the road is an arduous task, but not so great, relatively, as many of a similar kind that our people have already executed. We are in a position to ascertain its cost before the first blow shall be struck. In undertaking it we know what we are about. There need be no mistakes, consequently, in adapting means to ends. The early estimates of cost of construction for the Erie railway were less than $6,000,000 for the road fully completed and equipped—a sum $2,000,000 less than the present annual earnings of the road. When the road was commenced, those having it in charge had no idea of the nature and magnitude of the work they were undertaking. Experience was the only thing that could teach them. Hence the repeated disasters

which befell the company. In estimating the cost of a railroad spanning the continent, we have only to multiply three or four times the cost of some of the great lines in the East—the Erie, New York Central, Pennsylvania or Baltimore and Ohio roads.

The route for such a work, on the whole, is favorable. The vast plains from which the Rocky Mountains rise, ascend on the East at a rate not exceeding ten feet to the mile. The work of graduation on these plains will be of the easiest and most favorable character. No difficulty will be experienced probably in crossing the summit of the Rocky Mountains, nor in traversing the plains that lie between these and the Sierra Nevada. It is upon the western face of the latter that the only real difficulties in the matter of engineering will be encountered. A practicable pass through these is said to have been found. If not, engineering skill will undoubtedly find others that are practicable. The whole chain has been only imperfectly explored. Upon only a few of the routes or passes have levels been run. The routes through the passes which are claimed to be feasible, may, unquestionably, be greatly improved. We may, therefore, safely assume that a good route for the whole distance may be found.

The scarcity of water, which is known to prevail upon considerable portions of the route may, undoubtedly, be obviated by construction of reservoirs to collect and hold the rain fall, of which there is an abundance for the purpose of a railway, during some portions of the year. Every day is helping to solve the difficulty in the matter of fuel. There is certainly a great want of timber on the route, but discoveries are being made of coal that bid fair to supply an abundance of fuel, at not inconvenient distances from each other. The objections, consequently, arising from a lack of both wood and water, will find a comparatively easy solution, when we come to possess the information in reference to the route, that careful surveys, by practical engineers, will give us.

It was natural that the magnitude of the work should have appalled us in the outset. We always exaggerate what we do not comprehend. The formation of a company for the construction of the road has dispelled half its terrors. As we proceed, each succeeding step will be found to be easier than the proceeding. The insurmountable obstacle will never be met. Difficulties will vanish as they are approached. All that remains, consequently, to the full success of the great enterprise, is faithful and competent management on the part of the company, to secure at the same time the confidence of government, and to meet and dispose of the obstacles as they arise.

Androscoggin Railroad.

At a recent meeting of the third mortgage bondholders of the Androscoggin Railroad, it was voted to take legal possession of that portion of the road extending from Leeds Junction to Farmington.

Railroad from Corry to Titusville.

The work on the road leading to this place, goes bravely on. The work has commenced on the depot in our village. The buggymen of the beautiful green island are becoming common in our streets. We would say to the managers of the road:—do hasten the work, for the number of oil teams now engaged in hauling oil, cut our roads most fearfully after every rain. You cannot complete the work too soon.—*Titusville Gazette.*

Chicago, Burlington and Quincy Railroad.

At the annual meeting of this company, held in Chicago on the 20th of June, the report of the directors to the stockholders, also the several reports of the Treasurer, General Superintendent, and officers in charge of the different departments were presented and read and unanimously accepted. We have been favored with a copy of this report, from which we learn that the income for the fiscal year ending April 30, 1862, being the earnings on the road owned by the company, and their proportion (73 per cent.) of earnings on the 30 miles of the Galena and Chicago Railroad used by this company, were:

From freight		$1,208,294 31
" passengers		291,284 05
" mails and miscellaneous		51,649 03
		$1,551,227 39
The operating expenses were:		
Repairs of track	$146,219 82	
" bridges	33,174 06	
" build'gs etc.	18,197 02	
" locomotives.	72,093 96	
" cars	99,723 32	
Loss and damage	10,602 48	
Fuel consumed	88,448 77	
Oil and waste	15,205 09	
Train, engine, station and water service	168,041 99	
General expenses	52,007 02	
Car service	10,369 84	
Miscellaneous	16,946 83	
		731,030 20
Earnings less operating expenses		$820,197 19
Add balance to credit of income account May 1, 1861, including payments for sinking fund		890,374 95
Total income		$1,710,572 14
From which deduct—		
Interest on bonds	$373,986 25	
Taxes	20,821 28	
Expenditures for improvement	44,826 97	
Interest and exchange	25,728 58	
Rent of depots	39,999 98	
Transfer office expenses.	600 00	
Discount and loss on Illinois bank notes	8,448 44	
		414,411 50
Leaving a balance of		$1,296,160 64
Deduct amount paid for 310 sinking fund bonds		285,508 63
And there remains a net surplus to credit of income account, May 1, 1862		$1,010,652 01

The cost of the road and appurtenances as shown in the annexed balance sheet, has been $7,549,249 34; including payments and advances for account of connecting roads, the aggregate of construction account has been $11,887,989 87. The capital stock of the company on the 30th of April, was $4,794,540; and the funded debt, excluding the bonds cancelled by the sinking fund, $6,024,750—making the total stock and funded debt, $10,860,290. The company has therefore paid for account of construction, and for advances and investments on account of connecting roads, $1,071,699 87, in excess of the amount of its stock and funded debt.

The other assets and liabilities of the company on the 30th of April, were:

Bills receivable, and accounts due	$128,213 43
Cash in N. Y., Boston and Treasury	69,979 16
Amount of material on hand	64,407 50
Value of steam ferry boats	25,526 09
	$288,124 18
Due agents and connecting roads	$ 24,400 81
Unpaid accounts and pay rolls	34,379 10
Bills payable	3,850 00
Amount of unclaimed dividends	1,035 00
Balance	224,460 77
	$288,125 18

The capital stock of the company has been increased during the past year, $102,200; and the funded debt, $1,210,234 38. The payments made during the same time, on account of construction and equipment of road, and investments for and on account of connecting roads, have been as follows:

For construction and equipment	$80,823 42
For Peoria and Oquawka road	1,438,156 77
For Quincy and Chicago road	174,741 38
Total	$1,693,221 57

The payments exceed the amount of stock and bonds issued by the sum of $380,787 19, which has been paid out of the income of the past year.

The funded debt of the company, excluding the bonds cancelled by the sinking fund, was as follows:

Chicago and Aurora 1st mortgage 7 per cent, payable July 1, 1867	$230,000
Central Military Tract, 2d mortgage 8 per cent, payable May 1, 1868	204,000
Central Military Tract, 1st mortgage 7 per cent, payable July, 1864	248,000
Central Military Tract, plain 8 per cent, payable March 1, 1876	28,000
Chicago, Burlington and Quincy Trust mortgage sinking fund, 8 per cent, payable January 1, 1883	3,007,000
Chicago, Burlington and Quincy, plain 7 per cent, payable Sept. 20, 1890	755,000
Chicago, Burlington and Quincy, 2d mortgage, 4½ per cent till 1875, and 4 per cent afterwards, payable July 1, 1890	922,000
Scrip issued for Northern Cross, 2d mortgage bonds, payable in 32 semi-annual instalments, commencing January 1, 1861, without interest, $696,000, (less three instalments, $65,250, paid)	630,750
Total funded debt	$6,024,750

The receipts from the business of the road the past year, show an increase over the previous year of about 3 per cent, or $12,360 79. The increase upon freight was about 7 per cent, while the decrease upon passenger earnings was about 13 per cent. The expense for operating the road show a satisfactory improvement over the previous year, having been 47.13 per cent of earnings against 49.88, a gain of 2.75 per cent. The road and equipment has been well and thoroughly maintained, and the business transacted at a cost that gives assurance of good and efficient management on the part of the officers and men in the service of the company. The report says:

The Peoria & Oquawka Railroad, from Burlington to Galesburg, 42 miles, has been operated the past year by this Company, under the contract and lease originally made with that Company, and that part between Galesburg and Peoria, fifty four miles, under the contract and lease of Moss, Harding & Co. This road passes through a fine section of well improved country, and furnishes a large business that passes over the line from Galesburg to and from Chicago, contributing largely to the revenues of this Company.

The Quincy & Chicago Railroad, extending from Quincy to Galesburg, 100 miles, has been operated by the officers of this Company, in conjunction with the agent of the trustees, for the benefit of the Bondholders of that Road, now largely and substantially this Company.

Although no important step has been taken by the Directors, without the fullest consultation with and the advice of the Stockholders, it may not be out of place to narrate the history of the transactions of the Directors with the Peoria & Oquawka Railroad Company.

It was known to all the original Stockholders of the Chicago and Aurora, and the Central Military Tract Railroad Companies, that the Peoria & Oquawka Company was then engaged in the construction of a railroad from Peoria to Burlington, Iowa, and that it had made some considerable progress in the work. Those then in the control and management of that work, represented that it would be completed from Galesburg to Burlington, as soon at least as the lines of the Chicago & Aurora, and the Central Military Tract Roads could be extended to Galesburg, thus giving to those roads a connection with the Mississippi at Burlington. The assurances thus made had much to do originally in securing the only construction of the line of roads now owned by this Company, if they were not a very strong motive in determining the original Stockholders to engage in its construction.

As, however, the work of constructing the Central Military Tract Road drew towards its completion, and was approaching Galesburg, in the year 1853, it became evident that the Peoria & Oquawka Road would not be completed from Burlington to Galesburg, in time, without aid from the Companies now composing the Chicago, Burlington & Quincy Company, and earnest applications were made by those engaged in the P. & O. enterprise for that aid. It was represented by them that $50,000 would certainly enable them to complete that portion of their road west of Galesburg, thus furnishing the continuous line to the river, so much desired, and which ought to have been profitable to both parties.

The importance of a connection with the Mississippi for a long line of road extending from Chicago to Galesburg, and that connection needing only so small a sum as was supposed, to secure it, induced the officers of the Chicago & Aurora and Central Military Tract Companies to take fifty of the Second Mortgage Bonds of the Peoria & Oquawka Company, and advance that sum of money for them. This was in July, 1853.

Our line of road was completed to Galesburg, according to our original designs, but notwithstanding the aid offered, and the promises made, the Peoria & Oquawka came to a stand about twenty miles west of Galesburg. The Rock Island Road had reached the Mississippi about a hundred miles farther up, and a lack of twenty miles on the route from Chicago to Burlington by rail, was sufficient to determine all the river business by way of Rock Island. Pressing applications had been made to the Directors of the C. & A., and C. M. T. Cos. for further aid, but having been so disappointed in the first aid afforded, they declined. The amount of aid required was large, and the Directors would not again take the responsibility. Applications were made then to leading Stockholders, and the connections being important, after much delay, some of the Stockholders of those Companies met the committee of the Peoria & Oquawka Company at Ottawa, in June, 1854, and after much discussion, a conditional agreement was made, to be submitted to the Stockholders of the C. & A., and C. M. T. Railroad Companies, and if sanctioned by them, to be carried into effect by their Boards, by which the requisite aid was to be furnished. By this agreement the two Companies were to furnish such aid as should be necessary to complete that portion of the Peoria & Oquawka Railroad estimated to be such an amount as would furnish twenty-two hundred tons of iron; and in addition to that, in money, forty thousand dollars, but might amount in the result, to more. As it turned out, it took about 2,500 tons of iron, and the money required in addition, over-run the forty thousand dollars by a large amount. This contract was to have no force or effect on our part, until it was submitted and approved by the Stockholders, and was not acted upon or approved by our Board, until it had been sanctioned and ratified by the large mass of our Stockholders.

By the terms of the contract, the unsold Second Mortgage Bonds of the Peoria & Oquawka Company were pledged as collateral security for the advances to be made; that portion of the road of that Company, west of Galesburg, was to be leased to the Chicago & Aurora, and Central Military Tract Companies for three years at an agreed rent, which those Companies had the right to apply, the one half to sink the debt due to themselves, and the other half to pay the interest on the outstanding bonds, and they were to remain in possession of the road until their debt should be paid, which should become due in three years, but might be paid as much sooner as the Peoria & Oquawka Company might elect to pay it. At the termination of the lease, or when the debt should be paid, the Central Military Tract Company should have the right still to do its business over the road between Galesburg and Burlington, paying the Peoria & Oquawka Railroad Company such prices for fare and freight, as it should charge for the same classes of fare and freight upon other parts of its line of road. It was to secure this connection, and it was the offer of these rights which induced the Stockholders of this Company first, and the Directors afterwards, to make these large advances of money.

All were at the time aware of the fact, that there was a first and second mortgage upon the road so leased, the one for $500,000 and the second for $700,000, but under the second there were three hundred and thirty thousand of bonds yet unsold, and which were placed in the hands of this Company in pledge, and are still so held.

The Peoria & Oquawka Railroad Company afterwards succeeded in making an agreement with a company of gentlemen at Peoria and elsewhere in Illinois, since designated under the name of Moss, Harding & Co., to construct that portion of its road east of Galesburg to Elmwood, a distance of about forty miles, and to equip the whole road from Peoria to Burlington; these gentlemen furnishing all the money and materials, which they succeeded in doing to an amount of upwards of a million and a half of dollars, if we include the amount expended by them for rolling stock under the contract.

In the meantime, since the first arrangement of the Chicago & Aurora, and Military Tract Companies had been made with it, the Peoria & Oquawka Company had changed its character and control. It had undertaken the construction of a road—an extension so called—across the State of Illinois, from Peoria eastward to the Indiana line. The new stock subscribed in that Company became the controlling stock, and the eastern extension interest the controling interest. As soon as that extension was completed and an eastern connection secured, it seems to have been deemed very important by its managers, to obtain possession of the western portion from Peoria to Burlington, though the same arrangement had been made by it to lease the road to Moss, Harding & Co., with the right to control, operate and manage it, as had been made with the Chicago & Aurora, and Military Tract Companies, until their debt should be fully paid. The real difficulties which have grown up between them and Moss, Harding & Co., and the Chicago, Burlington & Quincy Company, have been because that Company deemed it important to get possession of the road, built mainly with the money of Moss, Harding & Co., and of the Chicago, Burlington & Quincy Company, and put it into their possession as security, and to remain until the debt was paid to each, without the payment of a dollar of those debts, and the other parties on their part deemed it equally important that their debt should first be paid, before they gave up securities which, whatever they may be now worth, had cost them in expenditures upon the faith of them, near two millions of money.

They began as men usually do who wish to avoid a liability and perpetrate a wrong, by charging the other parties with unfairness and fraud, and denying that anything was due and that if fair accounts were taken, the debt would be found to be extinguished.

A bill was filed by the Peoria & Oquawka Railroad Company in 1858, in the Peoria Circuit Court embodying many charges of this nature, and praying that Court to take the road out of the hands of Moss, Harding & Co., and the Chicago, Burlington & Quincy Company, and put it into the hands of a receiver, making no offer to pay the amount due, but aiming to get the road by an order of the Court out of the hands of the mortgagees, for such they were in effect, in a suit by the Peoria & Oquawka Railroad Company and which its counsel could move along or let sleep as he pleased.

While that suit was pending, though there could be no possibility of its success upon any just, legal or equitable grounds, one of their number and their counsel, in the name of the holders of a few bonds issued under the second mortgage upon the Peoria & Oquawka Railroad, representing twenty-four bonds, had applied to the trustees of the second mortgage under the power by the terms of the mortgage in them vested, to take the road into their possession, because the interest was not paid upon the bonds, and they had actually resolved to do so, and had appointed the counsel of the Peoria & Oquawka Railroad Company, as their agent for that purpose. It was with some difficulty that those gentlemen, upon an explanation of the circumstances, were induced to revoke their power.

Having been fully satisfied however, that this was a movement of the corporation, to avoid, instead of compelling the payment of a debt, they did so, and before the agent reached Illinois, his power was ended.

He however applied to the Court at Peoria, in the name of the Trustees of the first mortgage for such a receiver, and this Company was compelled to pay and advance the amount of the coupons due, near $45,000, to prevent the success of his application.

Up to this period of time, neither this Company nor any of its Stockholders, within the knowledge of its Directors, owned a bond of the P. & O. R. R. Co., except the fifty taken by the Company itself in 1853, and which it had tried but had been unable to sell. It had, however, become apparent that each six months the Company would be compelled to pay this interest, on both the first and second outstanding Peoria & Oquawka Bonds, or else directly or indirectly obtain the control of them or most of them, or else allow the Road which had been pledged to it for the amount advanced to construct it, to be sold upon the mortgages, one or both, in which case, in addition to the three or four hundred thousand dollars due to it, this Company must lose also the advantages which it had purchased upon the Road from Galesburg to Burlington. Being so deeply in, it became a question whether it had better go on, and advance what money was necessary to go through, or lose the rights acquired and the monies advanced to acquire them.

Moss, Harding & Co's position was peculiar. They had expended their whole fortune in this Road. Their object was to get their money. Their was no doubt of the amount of money they had expended. They had built forty miles of the Road and furnished equipments for a hundred miles.

Under these circumstances, the Stockholders of this Company were called together at the St. Nicholas hotel in New York to procure as large an attendance as possible, and the position of things fully explained to them, and upon the fullest consideration they could give the matter, they concurred with the Board, that it was expedient to arrange with Moss, Harding & Co. upon some basis, and acquire their rights and lease-hold interest, which was done some time ago.

The effect of this arrangement was at once to end a ruinous competition, and to obviate questions of a dangerous nature perhaps, in the courts, and to either secure the payment of the money due from the Peoria & Oquawka Railroad Company, both to Moss Harding & Co. and to the Chicago, Burlington & Quincy Company and its bonds, or else it would secure to the parties who held those securities, the property and Road constructed from their proceeds, with another consequential advantage of enabling the parties who might become the owners of the property at the sale, if it should be sold, to use it for its own advantage and save it from the effects of a ruinous competition, and thus preserve the value of the business of that section of the country, and if the Chicago, Burlington & Quincy Company should become the owner, also by its arragements with connecting Roads to obviate, in the terms it would have power to make, the ruin which results to all rival interests, when engaged in hostile competition.

The motives which have guided this Company can be clearly seen, and at each step, it has moved and taken it, only at the last moment of compulsion by the actions of the Peoria & Oquawka Company, and only when it had become evident that the alternative to the step taken, was great, certain, and immediate loss, both of money, interests, and rights acquired.

We have, with the approval of those of our constituents whom we could get to a Stockholders meeting, after sending a circular to all, preferred to endeavor to protect our rights and interests, rather than to allow them to be taken from us.

Both they and we may possibly have erred, but up to this time our judgment is, that we have only done what it would have been neglect of duty not to have done.

In this connection we will say, that no Director in this Company has purchased any bond of the Peoria & Oquawka Company to sell at an advance, and that no Director has deemed himself at liberty to do so.

It may be injustice to one of them, however, not to state that his credit and his obligations have been used to a large amount for these bonds, and that, at a time when this Company could not well do it, he has purchased many of the second mortgage bonds at such rates, "that if," as an enemy has said, "he could turn them in at par, he might make a competency for life."

It was, however, with the express agreement that the Company might take them from him at any time, at their simple cost, which has been done.

The Quincy & Toledo Railroad Company have continued to run their trains over the Quincy & Chicago Road, from Quincy to Camp Point, a distance of twenty-two miles, under an alleged agreement with the Quincy & Chicago Company, which the Trustees in possession do not acknowledge the validity of, but have repudiated.

The compensation paid by them for the use of this Road, including depot accomodations and station service at Quincy, the past year was only about $10,000; a sum wholly inadequate for the use of the property and the services performed.

The Trustees in order to place the property and its management more effectually in the hands of its owners, have instituted proceedings for the foreclosure of the mortgages upon it. It is proper to say, this Company being the principal owners of the bonds, that in case they should become the purchasers at the sale, they would have no desire or expectation to exclude the trains of the Quincy & Toledo Company from passing to and from Quincy, but on the contrary, would be prepared to make a just and fair arrangement with that Company, for the use of that part of the Road.

Conditional arrangements have been made by the Directors, subject to approval by the Stockholders at their annual meeting, by which this Company, if the arrangement meets with approval, will become the owner of thirty miles of Railroad, extending from Yates City, a point on the Peoria & Oquawka Railroad about twenty miles east of Galesburg, to Lewiston the county seat of Fulton county. The proprietors of that piece of Road had progressed far in its construction, had nearly graded and bridged it, had procured ties for the whole line and considerably more, had purchased and paid for and had in Illinois, chairs, spikes and iron, for twenty-six miles of the Road, but were unable to do more.

They were pressed by a suit by contractors for about $10,000, and owed to another contractor about $20,000, and it would take about $60,000 in addition to complete the thirty miles of Road, including the expenses of finishing the grading and purchasing the additional quantity of chairs, iron and spikes necessary, and the laying of the track.

Under these circumstances they proposed to give to this Company the road-bed and appurtenances, all their iron, chairs and spikes, and all the material and property belonging to the Road, in absolute ownership, if it would undertake to finish and take the control of the Road.

It runs into the centre of the most prosperous and productive farming county in the State, across the best coal beds in the State, and would when completed, contribute much to the through business of our line of Road to Chicago, as well as to the Peoria & Oquawka Road towards Peoria, in which this Company has a large interest.

It was impossible for this Company to advance the requisite or any considerable sum of money, even to secure a practical extension of its Road thirty miles into a very productive country, the business of which would be nearly all through business over its whole line, and would contribute to increase much its aggregate business. It was not deemed wise or prudent to allow the opportunity to pass by, however, if the money could be raised without any additional burden to the Stockholders of this company.

A conditional agreement was therefore made, by which the thirty miles of Road and materials above stated were to be transferred to this Company in absolute ownership, the parties then in control, creating bonds of the corporation in control of a portion of it, to the amount of $125,000, for the redemption of which the thirty miles of Road should stand pledged, and also, specifically, fifty per cent. of its gross earnings in the hands of this Company, and also, fifty per cent. of the gross earnings of the business which may pass to and from that Road over the Roads owned by this Company, until said bonds shall be withdrawn.

It was estimated that fifty per cent. of the gross business furnished by that Road, both upon that Road and ours, would be enough to pay the expenses of transacting the business, and that the surplus or profits on the business will in four or five years pay these bonds, and that then this Company will become the owners of this extension, without any incumbrance practically, and without having been required to advance any money.

It will have been paid for, if the estimate be a fair one, out of the profits of a business which otherwise would not have existed for this Company.

This arrangement for the redemption of the bonds under the auspices of this Company, enabled the parties to get for them money enough to complete the Road, which is now running—having been completed about the first of June; the arrangement however is not final or binding upon this Company, unless the contract of the Directors is approved at the annual meeting, by the Stockholders.

The Directors in such a case as this, securing an important Road at about $4,000 per mile and thus paid for, could have no doubt as to the propriety of their action, and they recommend a resolution to be passed approving the agreement. The bonds of $125,000 bear interest at the rate of eight per cent. It should be stated also that there had been created a trust mortgage, upon the line of which a portion of this thirty miles constitutes a part, but that none of the bonds were sold except five, which were given to the trustees, and that the remainder of the bonds, which were one million, are transferred, if the arrangement meets approval, to this Company. The Road, therefore, in the possession of this Company, will be unincumbered, except for the $125,000 and such an additional encumbrance upon twelve miles of it, as the value of $5,000 upon that security bears to one million.

The necessity which has heretofore existed for using the revenue of the Company, in protecting its interests, by the purchase of an interest in connecting Roads, no longer exists and the Directors know of no reason why the net revenue of the Road should not hereafter be exclusively devoted to the payment of regular semi annual dividends.

The equipment of the road consists of 62 locomotives (5 of which are leased to the Grand Trunk Railway); 27 first class and 4 second class passenger cars; 9 baggage and mail, 815 house freight, 22 way freight and conductors, 125 platform, 61 coal, 47 hand, and 40 gravel cars; a steam pile driver and car, a steam excavator, and a wrecking car.

The number of miles run by locomotives during the year was: with passenger trains, 254,529; with freight trains, 593,362; with miscellaneous trains, 219,134—total miles run, 1,067,025; an increase, as compared with the previous year of 66,989 miles.

The number of passengers transported between Chicago and Galesburg, 168 miles, was 157,177; of these 80,385 were moved west, and 76,792 east. Of the westward passengers, 17,434 were through, and 62,951 way. Of the eastward, 16,562 were through, and 60,230 way. The total mileage of passengers was 11,852,729. Between Galesburg and Burlington, 42 miles, the number carried eastward was 24,379; westward 23,783—total, 48,161; the total mileage being 1,293,403. Between Galesburg and Quincy, 100 miles, the number carried eastward was 31,623; westward, 36,509—total, 68,132; and the total mileage, 3,647,913.

The whole tonnage moved between Chicago and Galesburg, was 512,455; between Galesburg and Burlington, 113,248—total, 568,351, an increase over 1861 of 57,353 tons. Between Galesburg and Quincy, the tonnage was 155,322, a decrease in 1862 of 10,899 tons. The tonnage of the P. & O. road (E. D.) 54 miles, was 54,537. The total number of tons moved over the whole line, 364 miles, was 835,563. The number of tons hauled one mile over the whole line was 77,378,753, of which, 58,717,591 tons were moved eastward, and 18,656,161 westward. Total tons of freight forwarded from and received at Chicago in 1861, 395,156; in 1862, 426,631—excess in 1862, 31,475 tons. The total mileage of freight to and from Chicago the past year has been 57,708,763.

CONDENSED BALANCE SHEET.

Cash in N. Y., Boston and Treasury	69,978 16
	$12,176,115 05

From the above it appears that the payments on account of 334 miles of railroad and equipment have been $11,887,989 87; the materials on hand for future operating, and paid for, are valued at $89,933 59: the amount due on monthly traffic accounts and bills receivable, $128,213 43; and the cash on hand, after deducting all unfunded liabilities, is $6,313 75; making the total cost of the property of the corporation, $12,112,450 64. The funded debt, the average rate of interest upon which is 6.42 per cent, amounts to $6,024,750. The balance is represented by 47,915.4 shares of stock, at $127 05 per share. In other words, the amount stated above, as the balance to credit of income account, $1,296,160 64, represents the net earnings of the road which have not been divided among the shareholders—being $27 05 per share of capital stock. Of this amount, $285,508 63 has been paid for $310,000 bonds of the Company, which have been cancelled for sinking fund; and $1,010,652 01 has been paid on account of the property now owned by the corporation. As the necessity which has heretofore existed for using the revenue of the company in protecting its interests, by purchasing an interest in connecting roads, no longer exists, there appears no reason why the net revenue of the road should not hereafter be exclusively devoted to the payment of regular semi annual cash dividends.

The directors were authorized by the stockholders at the annual meeting, to extend the company's road from Aurora to Chicago. The contract made by the directors, subject to the ratification of the stockholders, for operating the Jacksonville and Savannah road, called the Lewiston Branch, extending from Yates City, through Fulton County to Lewiston, about thirty miles was duly ratified.

The directors chosen at the annual meeting June 20, 1862, are as follows:

President—JOHN VAN NORTWICK.

Directors—John Van Nortwick, Chauncey S. Colton, James F. Joy, Erastus Corning, John M. Forbes, John W. Brooks, Henry P. Kidder, Sidney Bartlett, Robert S. Watson, William Boott, Edward L. Baker.

Chairman of Board—EDWARD L. BAKER.

Superintendent—CHARLES G. HAMMOND.

Secretary and Treasurer—AMOS T. HALL.

Maine Central Railroad.

The stockholders of the Androscoggin and Kennebec and the Penobscot and Kennebec Railroad Companies, at the meeting in Waterville on the 4th inst., voted to sanction and approve the arrangement for the consolidation of the two corporations, under the name and style of the Maine Central Railroad Company.

Foreign Commerce of New York.

Value of Exports and Imports and Revenue from Customs at New York, in August, for three years:

Years.	Exports.	Imports.	Customs Rev.
1860	$15,735,000	$25,936,900	$3,491,200
1861	9,890,400	8,585,900	1,555,600
1862	17,433,700	14,304,800	4,762,600

Exports.

Value of exports from New York to foreign ports for the month of August:

	1860.	1861.	1862.
Domestic merchandise	$8,012,814	$9,652,301	$13,046,389
Foreign, dutiable	191,270	176,882	256,680
Foreign, free	76,083	57,965	417,100
Total merchandise	$8,280,187	$9,886,848	$13,720,169
Specie	7,451,813	3,600	3,713,532
Total exports	$15,735,000	$9,890,448	$17,433,701

Value of exports, exclusive of specie, from New York to foreign ports for eight months:

	1860.	1861.	1862.
First quarter	$20,727,100	$33,477,000	$32,075,600
Second quarter	22,840,800	33,123,500	29,798,300

American Railroad Journal.

Saturday, September 27, 1862.

Stock and Money Market.

In addition to the daily sales of stocks, bonds, etc., at the New York, Boston, Philadelphia and Baltimore Boards, quoted in the adjoining columns, we notice sales also at the several boards, of the following securities:

New York—Terre Haute and Richmond, 125; Lackawanna and Western, 1st mortgage, 103¾. Detroit, Monroe and Toledo, 1st mortgage, 93; Illinois coupon bonds, 1860, 98½; do., 1876, 100; Stonington, 95; Illinois Central full stock, 66; Brooklyn City water loan, 106; Brooklyn City railroad, 118; Rome and Watertown, 70. Norwich and Worcester, 58; Goshen Branch bonds, 103.

Boston—Michigan Central 8s, 1869, 107½; Bangor City 6s, 1882, 104; Chicago Municipal 7s, 102½; Concord, (par $50) 62; Cheshire, 15; U. S. October Coupons, 116¼; Bath City 6s, 104; Connecticut and Passumpsic River 6s, 1876, 95; Northern (Ogdensburg) 1st mortgage, 80; Concord and Portsmouth, guaranteed, 111. Somerville (horse), 25½; Malden and Melrose, (horse) 6¼; Pontiac Mining Co., 1⅝; Petherick do., 2¾; Huron, do., 7. Sales have also been made of Western (Mass.) R. R. 6s, 1875, 110; Hartford City 6s, water loan, 1879, 109¾; Roxbury City 5s, 1880, 100½; do., 6s, 1873, 109; Boston City 5s, 1874, 102¼; Massachusetts State 6s, 1875, 114; do., 1876, 114½; Chicago City 6s, 1875, 96; Brookline City 7s, 1865, 105½; Boston and Worcester R. R. 122¼; Connecticut River R. R. 98¾; Michigan Central 8s, 1869, 107½; Boston City 6s, 1868, 106½; Boston Water Power Co., 35½. The closing quotations were: Middlesex, horse, 82; Rutland and Burlington bonds, 38; Vermont Central, 17, Quincy Mining Co., 45½; Minnesota, do., 56½; Pittsburg, do., 53½; Superior, do., 2⅜; Toltec, do., 1¼.

Philadelphia—Allegheny Valley 7s, 73½; Pennsylvania Coupon 6s, 105; Schuylkill Navigation 6s, 1872, 79; do., 1882, 67½; North Pennsylvania mortgage scrip 72½; Ph., Germ. and Nor., 49; Elmira and Williamsport 7s, 90; Little

Schuylkill R. R., 17; West Branch 6s, 88; Sunbury and Erie 7s, 102; Lehigh Nav., 50; Long Island R. R. 6s, 97¾; North Penn. chattle scrip, 65; Schuylkill Nav., pref., 14; Morris Canal, pref., 118; Camden and Amboy 6s, 1883, 97; West Branch bonds, 30; Susquehanna Canal, 5; West Philadelphia R. R., 53; Girard College R. R., 24½; Race and Vine, R. R., 10.

Baltimore—Baltimore and Ohio R. R. bonds, 1875, 94; do., 1880, 93; Baltimore City 6s, 1870, 97¾. Maryland Inscribed 6s were wanted at 101½, 104 asked. Baltimore and Ohio closed without sales at 66 bid, 68½ asked. Western Maryland unendorsed bonds were in request at 68¾, 69¼ asked. Canton Co. was in the market at 15, no bid.

Interest and Dividends.

The Second Mortgage Bonds of the Cleveland, Painesville and Ashtabula Railroad Company, falling due Oct. 1, 1862, with accrued interest, will be paid on presentation at the Ocean Bank, New York, or at the office of the Company in Cleveland, Ohio. Interest on said bonds will cease from that date.

The bonds of the Housatonic Railroad Company falling due Jan. 1, 1863, with accurred interest, will be paid on presentation at Ketchum, Son & Co.'s, No. 40 Exchange place, New York, or at the office of the Company in Bridgeport Ct.

The Philadelphia, Wilmington and Baltimore Railroad Company have declared a semi-annual net dividend of five per cent, payable Oct 1.

The second mortgage bonds of the St. Louis, Alton and Terre Haute Railroad Company are now ready for delivery to holders of Receipt given for Second Mortgage Bonds of the Terre Haute and Alton, and Belleville and Illinoistown Railroad Company.

The Erie Railway Company are paying the interest due 1st inst., on the Second Mortgage Bonds extended to 1879.

Coupons due Sept. 1, on the bonds of the Saratoga and Whitehall Railroad Company will be paid on presentation at the Bank of the State of New York.

The Long Island Railroad Company has declared a dividend of seventy-five cents per share, payable to New York holders at the office of M. Morgan & Son, 37 William street.

The follwing is a copy of a reply to an inquiry from N. Marsh, Esq., president of the Erie Railway, whether the three per cent tax on coupons of railroad bonds applies to coupons due and payable on the 1st of September inst:

WASHINGTON, D. C., Sept. 22, 1862.

SIR:—Your letter sent to the Secretary of the Treasury has been referred to this office.

In reply, I have the honor to say, that the Solicitor of the Treasury has given an opinion that coupons due and payable on the 1st of September, or previous thereto, are not subject to the three per cent tax contemplated by the 31st section of the excise law.

Very respectfully,
GEO. S. BOUTWELL, Commissioner.

To NATHANIEL MARSH, President of Erie Railway Co., New York.

The Erie Company, with many others, understanding the law to apply to coupons payable on the 1st inst., has deducted the tax on all coupons due on that date, and since paid. The President announces that the Company will refund the amount which has thus been retained.

The Lykens Valley Railroad and Coal Company has declared a dividend of five per cent. payable to the New York stockholders at No. 13 William st.

The Hartford and New Haven Railroad Company have declared a dividend of $4 on each share of its stock, payable on the 1st of October. The Company assumes the payment of the Government tax of 3 per cent.

The Pittsburgh City Debt.

We have received a copy of an "Address to the Holders of Bonds of the City of Pittsburgh, issued to Railroad Companies in payments of subscriptions to the Stock of same Companies," emanating from the Finance Committee of the City Councils, and proposing a compromise. The statistics are interesting, but we have only space for but a few figures.

The City of Pittsburgh issued Bonds to the several railroad companies as follows:

To the Ohio and Pennsylvania	$200,000
To the Pittsburgh and Steubenville, 1st issue	250,000
To the Pittsburgh and Steubenville 2d issue	300,000
To the Allegheny Valley	400,000
To the Chartiers Valley	150,000
To the Pittsburgh and Connellsville	500,000
Total	$1,800,000

There is now due and unpaid Coupons on said Bonds as follows:

Ohio and Pennsylvania	$2,000
Pittsburgh and Steubenville, 1st issue	3,250
Pittsburgh and Steubenville, 2d issue	3,900
Allegheny Valley	4,800
Chartiers Valley	1,800
Pittsburgh and Connellsville	5,000
Total	$20,750
Each Coupon	30
Value of Coupons	$622,500
The average interest upon the Coupons is three years	112,050
Making the accumulated interest	734,000
Add to this the railroad subscriptions	1,800,000
The funded debt of the city	1,009,740
Making the entire city debt	$3,544,290
The valuation of the whole county for purposes of taxation is	$27,504,400
Of the city	10,651,276

or 38 72-100 per cent. of the whole amount, and therefore the proportion of the county debt which the city may be compelled to bear, would amount to $1,276,640 99, which added to the amount of city debt as above, would give an entire liability of $1,820,930 99, which divided among 11,801 taxables in the nine wards, is equal to over $400 for every taxable person in the city.

The annual expenses of the city, with this debt, is as follows:

Interest upon the Railroad debt amounts to, per annum	$152,073 00
The interest upon the Funded debt	60,584 40
Ordinary expenses of the City organization	120,000 00
The City proportion of County interest.	76,598 40
Assessment for County expenses 5 mills	53,256 00
Asssessment for School and Poor tax 10 mills	106,512 00
Total	$569,023 80

To meet this, $130,000 would be derived from water-tax, wharfs, &c., leaving $439,023 80 to be raised by direct taxation, requiring a levy of 4½ per cent., or 45 mills per annum on the assessed value of taxable property in the city, leaving no surplus for lost taxes, expenses of collection or sinking fund.

The people of Pittsburgh are satisfied that they cannot bear the burden, and that any attempt to do so would prove utterly ruinous to them individually, and that the business and property of the city would rapidly deteriorate, rendering them every year less able to meet the liability.

Baltimore and Ohio Railroad.

After an interruption of about two weeks, the Baltimore and Ohio Railroad is once more open as far as Harper's Ferry. The new bridge which crosses the Monacacy is a very substantial structure of wood, and was put up in the wonderfully short period of five days. The previous bridge was of iron, resting on two stone piers about thirty feet above the water. It was blown up by the insurgents, who poured powder into the cores of the iron castings on which the beams rested; but so hurriedly was the work of destruction done, that the destroyers were blown up with the bridge itself. There is no saying when the road will be opened throughout, as the Harper's Ferry bridge will have to be rebuilt. Fortunately the piers are still sound, however, in spite of attempts made to destroy them. As the enemy still holds the Southern shore of the upper Potomac, it would be manifestly unwise to ship a single ounce of merchandize over the road, were all the bridges in the best condition. The people of Maryland, and of Baltimore city in particular, have been heavy sufferers by the interruption of their Western trade, at a time when every avenue was needed to convey the immense surplus of the West to the Atlantic seaports. With all their losses and crosses the managers have shown a most commendable zeal, in restoring as speedily as possible the works along the line to their wonted condition.

The Seventh Avenue Railroad.

About one thousand workmen are now employed laying the track of the Seventh avenue and Broadway railroad, for the accomodation of the Broadway travel, and the work has been completed from Fifty-ninth street down to Forty-sixth.

The act of incorporation provides that the road shall commence on the Seventh avenue on Fifty-ninth street, and proceed by double track to the Bloomingdale road or Broadway, down Broadway and Union Place to University Place, along University Place to Clinton Place or Eighth street; thence with a single track along Wooster street to Canal, along Canal to West Broadway, along West Broadway and College Place to Barclay street, along Barclay to Church, and thence by double track to Broadway. There will also be connections by single track through Church to Canal and Greene streets and Clinton Place to University Place, there connecting with the double track. There will also be branch double track lines from Broadway along Seventh avenue and Greenwich avenue, across Sixth avenue and through Eighth street, McDougal, Fourth, Thompson, Canal, West Broadway, and so by the main route to Broadway; there will be a line, through Park Place to Broadway with double track; with single track from West Broadway through Duane to Church, thence by double track to Broadway;

and from Thompson street to Broadway by double track, through Broome street; also from Union Place to Broadway, along Fourteenth street; also from Thompson street along Canal and Varick by double track to West Broadway at Franklin street, with the privilege of using other roads in the locality.

From this it will be seen that the travel on Broadway will have the facilities of railroad conveyance up town on the west side from points at Barclay, Park Place, Duane, Broome and Fourteenth streets, in addition to those at the present starting places at Vesey and Canal streets. The road is expected to be partially completed this fall, and in its various ramifications certainly deserves the significant title of the "Gridiron road."

Washington City Railroads.

We notice that the City Railroads in the National Capital are now doing an excellent business. Nearly forty cars are running constantly, well filled with passengers. Twice this number of vehicles will be required when the lines shall have been completed and properly equipped. The great resort of strangers, including military, to Washington throws an immensely increased patronage to the city railways, with every prospect of its long continuance. At the present time these works offered a decided convenience to the travelling public, who are enabled to enjoy one privilege at a cheap rate—a good ride in comfortable cars. We may be allowed to remark here that if other conveninces could be had as cheaply, the city of Washington would probably by this time have been twice as popular as it is; but the extravagant prices charged for nearly everything have driven strangers and permanent residents alike from the place.

Albany, West Troy and Cohoes Horse R. R.

The contract for building this road between Albany and West Troy, has been awarded to Nathaniel Randolph, of Syracuse. The work, we understand, will be commenced without delay. The road is to run from the South Ferry, through Broadway, to the north bounds of the city, thence on the Troy road to the north of the village of West Troy. The track is to be double all the way, except in that portion of Broadway which is less than forty-five feet in width. On the Troy road the tracks will take the side roads, leaving the McAdamized turnpike in the centre for carriages.

Philadelphia, Wilmington and Baltimore Railroad.

Complaint is made about the slow time made by the passenger trains on the Philadelphia, Wilmington and Baltimore Railroad. The whole distance, 98 miles, is now regularly made in four hours, nearly twenty five miles an hour, including the passage of the Susequehannah by steamboat. If the time required for this purpose be deducted, it will be found that the speed of the trains on that road will be equal to most of our first-class lines. The track is in good condition, and the fare not higher than the average charged on American Railroads, East and West. If the Company are now accumulating a surplus, it will only make up in part for the lack of dividends in previous years, which it will be expended in the construction of a second track and providing additional equipment, both which are urgently needed.

Michigan State Loan.

This state is in the market for a new loan to meet that falling due January 1, 1863. The following statements may assist in estimating the value of the security. The whole debt of the state of Michigan is less than three million dollars, and the present issue will not increase it, as an equivalent amount of the old will be retired by the new. The items are:

Adjusted bonds, 6s, due in 1863	$1,744,185.00
Full paid five million loan, 6s, due in 1863	177,000.00
Part paid five million loan, when funded (due in 1863) will be	83,314.00
Renewal loan, 6s, due in 1878	216,000.00
Temporary loan, 7s, due in 1879	50,000.00
Internal improvement warrant bonds, on demand	50.00
Sault canal bonds, 6s, due in 1878	100,000.00
War loan bonds, 7s, due in 1886	605,500,00
Internal improvement warrants, due on demand	3,592.82
Total	$2,979,641.82

The following comparative table will give an idea of the rapid increase in population, production, and resources of the State of Michigan:

	1850.	1860.
Population	397,965	751,110
Value of real estate	$74,908,344	$262,785,750
Wheat grown, bush.	4,883,141	8,171,688
Other grain, bush.	8,197,178	17,788,759
Wool, lbs.	2,00[illegible]598	3,929,113
Butter, lbs.	7,0[illegible]478	15,498,047
Feet lumber sawed	301,167,500	795,606,693
No. of sheep	756,382	1,266,680
No. of neat cattle	270,803	472,924
Hay, tons	424,070	761,156

Susquehanna Canal.

The following are the receipts of the Susquehanna Canal to August 30, 1862 $97,529 25
Same time in 1861 40,639 62

Increase $56,889 63

Railroad Earnings—Weekly.

The traffic of the Great Western Railway of Canada for the week ending Sept. 12th, 1862, was as follows:

Passengers	$23,673 96
Freight and live stock	23,169 72
Mails and sundries	1,292 07
	$48,135 75
Corresponding week of last year	39,019 15
Increase	$9,116 60

The receipts of the Grand Trunk Railway of Canada for the week ending August 30, 1862, were:

Passengers	$21,560 31
Mails and sundries	2,888 08
Freight and live stock	30,055 61
Total	$54,504 00
Corresponding week of last year	51,995 40
Increase	$2,508 60

The earnings of the Milwaukee and Prairie du Chien Railroad for the 2d week in September, 1862, were $20,383 99
Do., 1861 29,951 66

Decrease $9,567 67

The Chicago and Rock Island Railroad earned the 2d week in September, 1862 $33,000 00
Do., 1861 37,900 00

Decrease $4,900 00

The Toledo and Wabash Railroad earned the 2d week of September, 1862 $39,192 80
Do., 1861 30,091 44

Increase $9,100 86

The Cleveland and Toledo Railroad earned the 2d week of September, 1862 $22,353 00
Do., 1861 20,032 00

Increase $2,271 00

The Michigan Central Railroad earned in the 1st week of September, 1862 $64,954 55
Do., 1861 47,752 72

Increase $17,201 83

The earnings on the Illinois Central road continue to show a large increase, equal to $40,000 the second week in September.

The earnings for the first two weeks of this month have been $219,162 40.

The Chicago and Northwestern Railroad earned in the 1st week of September, 1862 $24,894 17
Corresponding period, 1861 21,557 02

Increase $3,337 15

The Galena and Chicago Railroad earned the 2d week in September, 1862 $51,436 94
Do., 1861 42,674 19

Increase $8,762 75

The second week's earnings of the Michigan Southern Railroad in September are $9,000 greater than in 1861.

The earnings of the St. Louis, Alton and Chicago Railroad for the 2d week in September, 1862, were $30,527 25
Do., 1861 28,137 13

Increase $2,389 13

Brooklyn and Rockaway Railway.

A meeting of property owners and others interested in the construction of a railroad from Brooklyn to Rockaway was held at the Pavillion, Rockaway, on the 12th inst.

In the absence of the President of the proposed road, E. J. Porter, Esq., his brother, Mr. J. F. Porter of the M. S. R. R., presided. From the report of Mr. J. Schuyler, engineer, it appears that, although it is contemplated eventually to have an independent road from Brooklyn to Rockaway it is proposed for the present only to build a section of it from Rockaway Beach, to a point near Jamaica, where it will connect with the Long Island and the Brooklyn Central and Jamaica Railroads, thereby affording passengers equal facilities for reaching Rockaway by way of South Brooklyn and Hunter's Point. On the proposed route no indications of rock formation were discovered, and the ground, for the greater portion of the distance, being of an alluvial, sandy formation, and as no high embankments or deep excavations will be required, and only one bridge 30 feet wide will have to be built, the expense of constructing the road is estimated at a low figure, viz: $300,000, including complete equipment of the road with locomotives, passenger and freight cars, &c., and according to the number of passengers annually conveyed to and from Rockaway by stage, it is believed that ten per cent would be realized upon the investment. The length of the road from Rockaway to its junction with the Long Island Railroad would be about ten miles.

Dr. Auback, an influential resident of Rockaway or its vicinity, addressed the meeting at some

length, and set forth in glowing terms the advantage which must result from the construction of the proposed road. He had the greatest confidence that the road would prove a profitable investment in the shape of dividends, but, even should the stockholders not receive a cent in dividends on their investment, the additional value which it would give to their property would pay them good interest on their subscriptions. Dr. A. closed his remarks by observing that a very large nnmber of those present had taken the medicine he had prescribed for them with beneficial effects; and he now desired they should follow his advice in taking liberal dose of the Brooklyn and Rockaway Railroad stock.

At the close of the meeting a number of individuals came forward and gave the right of way for the railroad through their lands, and subscribed to the stock of the company. The meeting then adjourned to meet on the 25th inst., at the same place.

Taxation of the Michigan Southern and N. Indiana R. R. Co.

THE CAPITAL STOCK PAID IN AND LOANS MADE TO THE COMPANY, THE BASIS OF THEIR LIABILITY TO TAXATION. NO DEDUCTION MADE FOR STOCK GIVEN AWAY OR FOR CERTAIN LOSSES OF THE COMPANY.

A bill was filed in the Supreme Court of Michigan by the Michigan Southern and Northern Indiana Railroad Company, to restrain the collection of $11,718 34, being a balance claimed to be due from the Company to the State of Michigan for specific taxes.

This amount was made up of three-fourths of one per cent on six several items, which the Company claimed were all exempt from tax, and were set out in their bill as follows:

First, $300,000 of stock averred to consist of three thousand shares issued in 1849, and delivered to the "then several stockholders of the company, without any consideration therefor, without any subscription being made for the stock, and without any promise from any person whatsoever to pay the amount, or any part thereof to said company; nor was any capital directly or indirectly, actually or technically, paid to said company on account of said certificates."

Second, $185,459 84 which was the amount of discount on the sale of the company bonds below par.

Third, $250,000 of bonds known as Jackson Branch bonds, which were never sold by the company, but were lent and disposed of by the borrower, who had turned out as collateral the bonds of the Chicago and Mississippi R. R. Co., which the complainants took on settlement, and now hold, and which are averred to be worthless.

Fourth, $466,848 02 being the cost of various steamboats, one of which was destroyed some years since, and the remainder were alleged to have been employed and taxed in other states, and of late had been unemployed and lying idle.

Fifth, $300,000 lent by complainants to the Chicago & Mississippi R. R. Co., and secured by worthless securities.

Sixth, $60,136 87, expenses incurred in obtaining loans and selling bonds.

The bill was dismissed by the Wayne Circuit, and this decree was affirmed by a General Term of the Supreme Court, which held, that under the charter of the company which subjects it to an annual tax of ¾ of one per cent upon its capital stock paid in, including the $500,000 purchase money, and upon the loans made to the company for the purpose of constructing their road, or purchasing, constructing, or chartering, or hiring steamboats—the company cannot claim exemption from taxation on sums of money paid out for commissions, and other expenses attending the sale of its bonds and the obtaining of loans. Nor can the company claim exemption from taxation upon any sum of money borrowed by it, and afterwards loaned upon worthless securities, whereby it became lost to the company. Nor could any deduction be had for the 3000 shares of capital stock distributed as a bonus among the original stockholders, the allegation not being sustained by the proof. The act of consolidation was not designed to change the principle of taxation fixed by the original charter of the Michigan Company, but all the stock and loans formerly taxable were to continue taxable without diminution, by losses or unproductiveness. No deduction could be made, in the cost of the steamboats destroyed by accident, or laying within the limits of another state and taxable there.

The following opinion, among others, was rendered at the decision of the case.

MANNING J. This court in the case of *The People &c., of Michigan, vs. the Michigan S. & N. I. R. R. Co.*, 4 *Mich.* 398, decided the present complainant was not entitled to any deduction from its tax on the capital stock and loans of the company on account of the 3000 shares of stock alleged to have been gratuitously distributed among its shareholders; and the $185,459 84, lost by the company in negotiating its loans; and the $250,000 of Jackson Branch bonds. That decision I think was correct.

The charter of the Michigan Southern Railroad Company makes the capital stock and loans of the company for constructing the road the basis of the tax to be paid to the State. In doing this the Legislature probably intended the company should pay to the State, after the 1st of Feb. 1851, three quarters of one per cent on what the construction of the road should cost the company. But how should the cost of constructing the road be ascertained? Should it be left with the company who was to pay the tax to fix the amount? or should the capital stock and loans made by the company, as the company would have no other means to build the road, be taken as the cost of the road, and be made the basis of taxation?

The latter was probably adopted as less objectionable than the former. However, that may be, the company is required to pay a tax of ¾ of one per cent. annually to the State on its capital stock paid in, and upon all loans to the company for constructing the road. And the question is what is meant by *capital stock paid in*, and *loans made to the company*. By the words "capital stock paid in," I understand that the company is not to be taxed on what is due it from its stockholders, who would be called on from time to time to pay for their stock as the work progressed, and the company should stand in need of the money. It was not intended to exempt from taxation, stock which the company for some imaginary or actual, past or future benefit, or other cause, might think proper to dispose of without an equivalent in money. Such stock within the meaning of the charter, is paid in, as there is nothing due on it to the company to be paid at a future day. When I say I own a certain number of shares of stock, with ten per cent., or any amount paid in, my language implies, and I am understood as saying, at the same time, that there is something still due from me to the company whose stock I hold.

And "upon all loans made to said company," &c. This language it is to be observed, is not upon all *moneys borrowed* or *received* on its loans; but "upon all loans made." There is a difference between these phrases, and they cannot be used or construed to mean the same thing when the money received is less than the amount mentioned in the bond given to secure the loan. The loan is the sum mentioned in the bond, and not the money received, and the interest payable on the loan, is interest on the amount mentioned in the bond and not what the bond may have been sold for in the market to effect the loan. * * * *

In regard to the $250,000 Jackson Branch bonds, they are not only a part of the $2,500,000 loaned to the company, but the allegation in the bill relative to them is not sustained by the proofs. The bill states that one of the officers of the Michigan Southern R. R. Co. without authority from the corporation, handed over these bonds to a person interested in the Chicago & Mississippi R. R. Co. on the promise of said person to return them, he giving out and pretending that he desired them only temporarily to pledge, as collateral security for a loan to aid in the construction of said latter company's road; that the bonds have not been returned; that they are in the hands of *bona fide* purchasers, and that the company has not realized anything from them.

* * * * * *

From these entries (Mr. Barbydt's in the company's books,) it appears that the bonds were sold on the 15th of October, 1853, to Henry Dwight, Jr., for $250,000, to be paid on the 4th of July, 1855, with interest payable semi annually; the principal or any part thereof, at the option of the purchaser, to be paid in Michigan Southern or Northern Indiana Railroad bonds at par; that Dwight gave his note or obligation for the $250,000, and $337,000 of second mortgage bonds of the Chicago & Mississippi Railroad Company as collateral security for the payment of his note or obligation. And that on the 13th of July, 1855, $300,000 of these bonds were taken from Mr. Dwight, in payment of his note.

The next two sums $166,848 02, cost of steamers, and $300,000, lent to the Chicago & Mississippi Railroad Company, it is claimed should be deducted from the amount of capital stock and loans. The first sum because one of the steamers has been lost by fire, and the others, since the consolidation, have not been used and employed within the State of Michigan, but in other States, and are there taxed. And the $300,000, because the same has been lost by the failure of the Chicago & Mississippi Railroad Company.

To this part of the bill, as well as to all other claims for deduction to be made from the company's capital and loans, for any cause, there is a very short and conclusive answer, viz: that the Auditor General is not authorized by law to make any deduction whatever, while it is made his duty to levy the tax on the whole amount of the company's capital stock paid in, and all loans made to the company for constructing its roads. This is also a sufficient answer to the $60,136 37, deduction claimed for commissions and expenses in negotiating its loans.

The third section of the act authorizing the consolidation of the two companies, it was held in the case in 4 Mich., and I think correctly, did not change the principles of taxation on the part of the consolidated company's road in the State of Michigan. I think the decree dismissing, the bill should be affirmed. Decree affirmed.

A Railway through the Pyrenees.

The successful completion of a Spanish railway across the Pyrenees, and the first which has actually passed over either of the two greatest of the mountainous ranges of Western Europe, may perhaps be deemed of sufficient interest in several respects to deserve a passing notice.

Various circumstances, also, in connexion with the undertaking of which the first and most difficult portion has been thus happily accomplished are remarkable enough; and they are indicative of the rapid though silent progress which Spain is making.

On the 21st of August, 1862, the first railway train, drawn by locomotive engines, crossed the chain of the Cantabrian Pyrenees, over the northern division of the Tudela and Bilbao Railway, from the seaport of Bilbao to the town of Miranda on the Ebro. On the 22d the Minister of Public Works for Spain made his inspection from Miranda to Bilbao, returning on the 23d, the passage across the mountains being made by trains running also in both directions each day. The distance from Bilbao to Miranda is about 60 English miles, of which more than 40 miles are in ascending from the coast to the summit, which is 2,163 feet above the sea, being the lowest pass in the whole range of the Pyrenees. The northern slopes are almost invariably steep. Here the difficulties to be overcome are concentrated. In the present case they have been surmounted by winding along the shoulders of the mountains, with heavy works of excavation, tunneling, and embankments, until the railway resembles a turnpike road more than such a line as is usually considered should be made to enable a locomotive engine to travel over it with speed and safety, and dragging heavy loads. The average rate of ascent from the sea is 54 feet per mile; the *maximum* is 76 feet. The predominant curvature has a radius of 300 yards only, and the curves are constantly reversing. There are two points on the line at the entrance of the Concha, or Basin of Ordima (the ancient capital of the Province of Biscay), distant only 600 yards apart measured horizontally across the neck or gorge of the basin, which are distantly eight and a half miles from each other in travelling along the line, and which differ 456 feet in level. A technical description of the railway would be out of place here, and it would occupy pages to paint in words the grandeur of the mountain scenery, seen as it was seen, in full perfection, under the beautiful sunny sky which beamed over each day's passage of the trains. The changes of view were almost as rapid as the motion of the locomotive engine, owing to the tortuous character of the course, forced upon the engineer by the rugged country traversed. The last glimpse of the northern landscape which the passengers had was over the Gujuli waterfall, and down to a depth of 400 feet to the bottom of the ravine into which it fell; after which the carriages rushed into the summit tunnel to emerge into a wide meadow with a gently falling stream; for the descent on the southern side is very gradual, the average rate from the summit to the Ebro being less than 24 feet to a mile. The valley being wide the curves are also much easier. The most remarkable point in the descent is the pass or gorge of the Techas, through which flows the river Bazas at the village of Subijana-Morillos, where Wellington had his head-quarters a night before the battle of Vitoria, in the summer of 1813.

The time occupied by trains between Bilbao and Miranda is two hours and three quarters. To the powerful locomotives of this railway, the sharp reversing curves and steep gradients in ascending from the north to the summit appear to make no difference with trains of seven or eight carriages.

On the occasion of the crossing of the mountains on the 22d of August, there was the usual *cortège* of authorities and officials meeting the Minister of Public Works and the gentlemen of his party. The usual breakfast was set out, but there were no toasts and no speeches. Upon arriving in Bilbao a small steamer took the distinguished group down to the mouth of the river (Nervion) where a good view was obtained of the deep Bay of Bilbao, where it is proposed to construct a breakwater more than a mile in length, within which nearly 1,000 acres of sheltered anchorage will be attainable—in fact, a safety harbor, so much required at the extremity of the Bay of Biscay.

The southern division of the Tudela and Bilbao Railway, (which is to be completed by the early part of the year 1863) proceeds eastward from Miranda for nearly 90 miles, always on the right or south bank of the Ebro, for strategic though not for engineering reasons. In its course are passed many places of historical celebrity or interest—Haro, Briones, Cenicero, Navarete, Logrono, Calahorra, Alfaro, and various others. Between Alfaro and Tudela this railway joins the Pamplona and Zaragoza line, now in operation, and the line from Zaragoza to Barcelona was opened last year.

The amount expended and to be expended on the 155 miles of the Tudela and Bilbao Railway is about 2,500,000*l.* sterling. The 66 miles from Bilbao to Miranda (including 20 miles of the most difficult of railway works known, principally through the Pyrenees) have cost merely for construction more than 1,000,000*l.*; the 89 miles along the Ebro have been made for four-fifths of that sum. The rest of the money has been spent on stations, rolling-stock, management, &c. The total with all paid and capital account closed is 16,000*l.* per English mile, and is within the capital of the company. The whole of this capital is Spanish money, mostly subscribed by Bilbao and its commercial connections. Not a share is held out of Spain or the colonies of Spain. No bonds have been issued, nor any mortgages given. The credit of the company and of its directors stood high enough to procure them all the financial aid they wanted; and they were spared the necessity of having to issue their obligations at the ruinous discount common to other railway companies on the continent. There is a Government subvention equivalent to 30 per cent. of the capital, but the period and conditions of payment are such as to keep back the instalments, and meantime the company have been thrown on other resources, which have not failed them in the hour of their need.

It should be mentioned that this line joins the Northern Railway of Spain at Miranda on the Ebro, which railway is opened from Madrid to the southern slope of the Pyrenees, near Alzazua, about 25 miles N. E. of Vitoria, with the exception of a gap of 30 or 40 miles, including the Guadarama Mountains. By this route the Minister of Public Works (Marquis Armigo de Vega) returned from Bilbao to Madrid in 18 hours, of which only 12 were by railway. When the above gap is closed, as it will be next year, the journey from Bilbao to Madrid will be performed in 14 hours. It will perhaps be some years longer before the Northern Railway of Spain will be completely connected with the French lines at the frontier; but towards the end of next year (1863) there will only remain a portion unfinished equal to four or five hours' traveling by diligence across the Pyrenees, forming the only exception as to a through route by railway from Paris to Madrid; and, indeed, the distance between these two capitals may then be traversed in 36 hours, notwithstanding the above drawback.

The engineer-in-chief of the railway, as well as of the proposed breakwater, is Mr. Vignoles, F. R. S. The contractor who executed the works through the Pyrenees, and from Bilbao to Miranda, is the celebrated Mr. Brassey. The iron for the railway, the engines, and the vehicles were made in England, as were also nearly all the materials for the station except the mere shell of the building. The chairman of the company is Senor Don Pablo de Epalza, who may be considered as holding the highest rank as a Spanish merchant. The managing director is Senor Montesino, formerly Director-General of Public Works in Spain. He is a member of the Cortes, and one of the Commissioners for Spain at the International Exhibition.

On the completion of the Tudela and Bilbao Railway, it will become the great channel through which the corn, wine, and oil of Castile, and the rich agricultural provinces west of Burgos and Valladolid as far as Leon, will find their way for exportation at Bilbao.

Sugar Crop of Louisiana.

The statistics of the sugar crop of Louisiana are as follows:

The actual yield is estimated to have comprised 459,410 hogsheads, averaging 1,150 lbs., and making an aggregate weight of 528,321,500 lbs. This embraced 389,264 hogsheads of brown sugar, made by the old process, and 70,146 refined, clarified, &c., including cistern bottoms, the whole being the product of 1,291 sugar houses, of which 1,027 were worked by steam and 264 by horse power. The crop of the preceding year amounted to 228,753 hogsheads, weighing 263,065,000 lbs., showing an increase for the last year of 230,657 hhds., or 265,266,500 lbs.

According to our calculations the price of the entire crop has averaged 4¾ against 4½c. last year. At this average, and taking the estimate of 1,150 lbs. to the hogshead, the aggregate value of the crop of 459,410 hhds. is $25,095,271 against $14,468,627, the product of 228,753 hhds. last year; or an increase of $10,626,644. The receipts at the levee since the 1st of September have been 225,356 hhds., and 7,907 tierces and bbls. last year.

The stock now on hand in this state is estimated at 170,000 hhds.

The yield of molasses from the last year's cane crop is estimated at seventy gallons for each 1,000

pounds of sugar, against the same for the previous year, or an aggregate of $3,982,505 gallons against 18,414,550 the year previous, showing an increase of 18,567,955 gallons, or more than as much again. The arrivals at the levee during the season have been 401,404 barrels against 313,260 last year, showing an increase of 88,944 barrels.

The total value of the product, estimated at an average of 181 3 cents per gallon, sum up $6,703,-079 against $4,235,346 last year, showing an increase of $2,467,733.—*N. O. Shipping List, Sept. 1.*

The Production of Breadstuffs.

The following statistics are derived from the last census report:

WHEAT, RYE AND CORN PRODUCED IN THE UNITED STATES IN 1860.

States.	Wheat. bush.	Rye. bush.	Corn. bush.
California	5,946,600	55,000	524,800
Connecticut...	52,400	618,700	2,059,800
Delaware.....	912,000	27,200	3 892,400
Illinois.....	24,159,500	981,300	115,296,800
Indiana.....	15,219,100	400,200	69,641,600
Iowa.....	8,433,200	176,000	41,117,000
Kansas.....	168,500	3,900	5,678,800
Kentucky....	7,394,800	1,055,300	64,043,600
Maine.....	233,900	123,300	1,546,000
Maryland....	6,103,500	519,000	13,445,000
Mass.....	119,800	388,000	2,157,000
Michigan....	8,313,200	494,200	12,652,100
Minnesota....	2,195,800	124,300	2,586,600

" 1850..	100,486,000	14,188,800	592,071,000

The relative value of these three products in the loyal and in the Seceding States may be represented as follows:

	Wheat at $1 25.	Rye at 75c.	Corn at 50c.
Loyal St'ts..	$174,770,000	14,103,000	274,893,900
Seced'g St'ts	39,269,000	1,630,000	140,332,000
Total 1860..	$213,979,000	15,733,000	415,225,000
" 1850..	125,607,000	10,641,600	296,025,000

From this official return, it would appear that New York, which was in 1839–40 one of the leading wheat producing States, has now become the seventh, and is about on a parallel with Michigan in the article of wheat. Agriculturists state that the cultivation of wheat or any other article for a long series of years, without intermission, is an injury to the soil and to the crops. If New York would recover her position as a leading State in the production of wheat, more attention must be given to rotation of crops. The relative position of this State as a wheat producer, since 1840, is shown in the annexed summary of all the States producing over five million bushels each.

WHEAT-PRODUCING STATES, 1840—1860.

	1840.	1850.	1860.
Illinois.....	3,335,400	9,414,600	24,159,500
Indiana	4,049,400	6,214,400	15,219,100
Wisconsin ...	211,100	4,286,100	15,812,500
Ohio.....	16,571,600	14,487,300	14,532,600
Virginia.....	10,109,700	11,212.600	13,129,100
Pennsylvania.	13,218,000	15,367,700	13,045,200
New York...	12,286,400	13,121.500	8,681,100
Michigan....	2,166,100	4,925,800	8,313,200
Iowa.....	151,700	1,530,500	8,433,200
Kentucky ...	4,803,100	2,142,800	7,394,800
Maryland....	3,345,700	4,494,600	6,103,500
California ...	.....	17,200	5,946,600
Tennessee ...	4,569,700	1,619,400	5,469,900
13 States....	74,804,900	88,834,500	146,180,400
All others ...	13,708,300	11,651,300	25,003,100
Bush. of wh't.	88,513,200	100,485,800	171,183,500

Thus the West and Northwest must become the future granary for the supply of the Eastern States of Europe; while other States, giving more attention to other crops, neglect the cereals.

New York, in 1840, with a population of 2,428,-921, produced 12,286,400 bushels of wheat, or five bushels per capita, and in 1850 a little over four bushels per capita; but now this production is reduced to about two and a quarter bushels each. The production of the whole country per head, according to the census of 1840–1860, has been as follows:

Year.	Population.	Wheat Product.	Bushels. per Capita.
1840.....	17,069,453	88,513,000	5.12
1850.....	23,191,876	100,485,000	4.33
1860.....	31,445,089	171,183,000	5.44

Of the facilities for increased production in the United States, the report of the Superintendent of the Census, says:

"Whether the superior agricultural advantages and the demand for improved implements and machinery in the United States have stimulated the facile ingenuity of our mechanics, or have only been seconded by its ready contributions to industry, we shall not stop to inquire. The greatest triumphs of mechanical skill, in its applications to agriculture, are witnessed in the instruments adapted to the tillage, harvesting and subsequent handling of the immense grain crops of the country, and particularly upon the Western prairies. Without the improvements in plows and other implements of tillage, which have been multiplied to an incredible extent, and are now apparently about to culminate in the steam plow, the wheat and corn crops of those fertile plains could not probably be raised. But were it possible to produce wheat upon the scale that it is now raised, much of the profits, and not a little of the product, would be lost were the farmer compelled to wait upon the slow process of the sickle, the cradle and the hand rake, for securing it when ripe. The reaping machine, the harvester, and machines for threshing, winnowing and cleaning his wheat for the market, have become quite indispensable to every large grain grower. The commercial importance of the wheat crop and its various relations to the subject of domestic and foreign supply, to markets, the means of transportation, storage, &c., make it highly important that the producer shall have the means of putting his crop in the market at the earliest or most favorable time, and with the greatest precision."

While the surplus of the year 1860 must have been large, there is no doubt that the production in 1861 and 1862 has been much larger, probably exceeding two hundred millions of bushels of wheat. It is well to recur, in the consideration of this question, to the returns of foreign exports from the United States in breadstuffs. These were officially stated as follows:

Year.	Value.	Year.	Value.
1845	$7,447,000	1853	$21,875,000
1846	16,605,000	1854	48,383,000
1847	58,262,000	1855	21,557,000
1848	22,608,000	1856	56,619,000
1849	22,895,000	1857	55,626,000
1850	13,06 ,000	1858	33 698,000
1851	14,556,000	1859	24,893,000
1852	17,256,000	1860	27,590,000

In the year 1861 the value of breadstuffs and provisions exported had increased to $94,866,000, against $46,271,000 in the previous year. These facts show conclusively that the United States are capable of producing wheat and corn to such an extent as will enable us to become a creditor nation in our trade with European countries. The gold of the Pacific, the breadstuffs of the West and Northwest, added to a protective tariff, will, together, contribute to reinstate public credit and individual enterprise whenever the end of the war shall arrive.

England resumed specie payment in 1820–21, after twenty-three years suspension, when the population of the United Kingdom was two-thirds of what it is now, and with a national debt of eight hundred and sixty millions sterling, and eighty millions sterling annual expenditure and fifty millions sterling paper currency.

It is now less than one year since the suspension of specie payments in this country. Our national debt is not one-sixth of what England had to contend against in 1820, and might be extinguished with ten years' product of California gold. Our annual expenditure, upon the resumption of peace, will probably be reduced to one hundred or one hundred and fifty millions of dollars, being about one-third or one-fourth the annual cost of government in England forty years ago. England may want cotton for the backs of her people, but her want of breadstuffs is more imperative for the present and the future. Instead of Cotton is King, let us remember that Corn is King.

TO RAILROAD MEN.

A GENTLEMAN to take the superintendence of the sale of an improvement for Railway Cars. It is already introduced on some roads, and is valuable. To one acquainted with Railroad managers, and who has influence, a large annual income may be secured.

Address—**Car Improvement Co., Box 363, Post Office, New York.** 38tf

OTTO AHLSTROM,

MANUFACTURER OF THE

LOUDON & AHLSTROM'S

PATENT EXPANSION SCREW FASTENINGS,

A QUICK and sure means of making preparatory Fastenings —The hole not requiring to be large at the bottom.

Also for ANCHORING LIGHT-HOUSES, BEACONS, BUOYS, BRIDGES, DAMS, FORTIFICATIONS, etc.

For NEWEL, GATE AND FENCE POSTS, and IRON RAILINGS in various ways.

Also, a CHEAP and ready means for fastening Iron or other ornaments (large or small) to stone or brick buildings.

For STAPLES, HINGES, AWNINGS, SIGNS, SHUTTER FASTENERS, LEADER HOOKS, etc.

For INSIDE WORK, such as for fastening articles to Hard Walls, Marble, etc., without hammering or using lead. For fastening Marble Tops to Furniture, etc. They are also so constructed as to be applied in Wood.

For LIFTING PURPOSES, such as Foundrymen's Tools for raising their patterns of wood or metal from the sand. They may be used in tapped or smooth holes.

Orders promptly executed by

OTTO AHLSTROM,
22nd St., 2nd Avenue, N. Y.

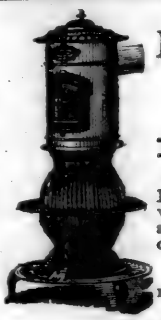
VENTILATION.
THE undersigned has devised and patented the only system of VENTILATION for **Buildings, Vessels, RAILROAD CARS**, etc., by which **spontaneous ventilation** can be effectually carried out; and is willing to dispose of the same to parties desirous of purchasing at a reasonable price.
Address HENRY RUTTAN,
Coburg, Canada.

CUMBERLAND COAL.
THE BORDEN MINING COMPANY
ARE now prepared to fill orders and to make contracts for the season of 1862, for **CUMBERLAND COAL**, DELIVERABLE ON BOARD VESSEL AT **Baltimore, Md., Alexandria, Va.,** or **Georgetown, D. C.** Purchasers may rely upon the Coal proving equal in quality to that heretofore furnished.
The Company also have the pleasure of announcing that they have completed, after two years' labor, their shaft and machinery upon their new property in the VALLEY OF GEORGE'S CREEK, and are lifting from the very heart of the Coal Basin a superior and perfect article of **BITUMINOUS COAL,** remarkably free from impurities of every description, and possessing qualities peculiarly adapting it to Locomotive use, and to generating steam under all circumstances. This Coal will be known in market as **"BORDEN'S PIT COAL."**
Our Railroad friends, and others requiring a superior Coal, will find it to their interest to give this a trial before contracting elsewhere.
For prices and other information apply to
WILLIAM BORDEN.
3m21 **Nos. 70 and 71 West st., New York.**



Challenge Air-tight KITCHEN RANGES,
May be placed in a fire-place without masonry, and with or without water-back; or may be set out on feet, as an ordinary stove.
This range, already very popular, has the **LARGEST OVENS** of any in the market; BAKES PERFECTLY, never burning to brown at the bottom; BOILS, ROASTS and BROILS with unequalled facility and dispatch, and with extraordinary **ECONOMY OF FUEL,** which may be either coal or wood. Flues large and easily cleaned. A child can manage it, so simple is its construction. Castings extra heavy, and design plain and chaste.
Four sizes, adapted to families and hotels.

Beacon Light
SUMMER AND WINTER
PORTABLE RANGE,

Is a very popular range, having six boiler holes, one large oven that baker perfectly, with an arrangement for roasting, or heating irons at the end. It is very economical of fuel. For a FEW DOLLARS a family may be supplied with a PERFECT COOKING APPARATUS, equal to the highest price stove in the market.
Three sizes, adapted to coal, or wood.
SANFORD, TRUSLOW & CO.,

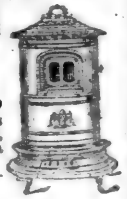
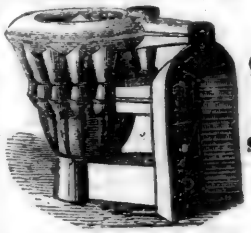
SANFORD'S
MAMMOTH
OR
GLOBE HEATERS.
The best stoves for RAILROAD DEPOTS and SHOPS, and all places where a great heat is required. They are very durable, and very economical of coal.

Beware of imitations that are inferior in strength and in other respects.



TESTIMONIALS.

HUDSON RIVER RAILROAD OFFICE, N. Y
This Company have now in use, over two hundred of Sanford's Mammoth Heaters, in Station Houses, Work Shops, and Engine Houses; we commenced using them in 1853, and some of the first stoves put up are still good and in use. We consider them the best Heaters now in use.
J. M. HEBARD, Supply Agent.



UNION FERRY COMPANY.
The Mammoth Heaters have been used by this Company in their waiting rooms at the several ferries and found to be very excellent stoves and more durable and valuable than any heretofore used. CYRUS P. SMITH, Managing Director.

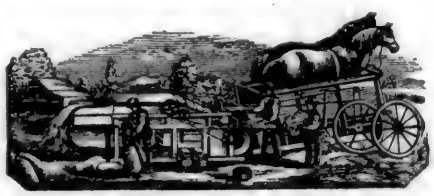
IMPORTANT
TO
RAILROAD COMPANIES.

THE ATTENTION OF
RAILROAD MANAGERS
Is called especially to the Machines manufactured especially for the use of Railroad Companies by the proprietors of the
ALBANY AGRICULTURAL WORKS,
CONSISTING OF
EMERY'S PATENT
Railway Horse Power,

Made changeable for both right and left hand work, also with changeable degrees of forces and motions of the driving Pullies without changing the Speed and Labor of the Horses, thereby adapting them to the different uses required, as Sawing Wood, Pumping Water, Driving Elevators and Machine Shops, Foundries, etc. The Power is also adjustable to any degree of wear or use, so as to always insure its working with its greatest efficiency. All the running chains in these Powers are made of the best MALLEABLE IRON which gives to them triple the strength and durability of Grey Iron which last is universally used by all other Railway Horse Power Manufacturers—thereby at the same time lessening the weight of these several hundred pounds, making them less cumbrous for handling and transportation.



WOOD SAWING MILLS.

These Sawing Mills are made upon the most approved and convenient plans in use. Having a heavy plate fly-wheel fixed to the Mandrill with a Ratchet or catch pulley for the driving band on the outside of the fly-wheel—the journal bearings are fitted with Babbet Metal—the wood carriage traverses on iron ways and gibbs—a 24 or 26 inch Saw is fitted, filed and set in working order and the plates warranted. When desired, a 14 inch saw is fitted, also a table for the purpose of slitting boards, etc., for fencing and carpenter work.
The whole together forming one of the most complete and desirable sets of machines for their purposes. They are already in very general use on nearly all the principal Railroads in this country.

PRICE, ONE HORSE POWER $90.00
" TWO " " 120.00
" SAW MILL, 24 in. Saw 37.00
SETT BANDS and EXTRAS ... 5.00

PUMPING ENGINES

Of different kinds for Raising Water for Railroad tanks and other purposes, can be furnished on demand with Reciprocating or Rotary Pumps—fitted to be operated by these Horse Power and the best adapted for Railroad and Mining purposes. One of the SEVENTY-FIVE DOLLAR PUMPING ENGINES when driven by the TWO HORSE POWER has a capacity equal to any Four or Five Horse Power Steam Engine and Pumping Machine for the same purposes.

THRESHING MACHINES

Of the most approved kinds, for one and two horses and with simply Separators, or with Complete Cleaners which fit the grain for market in one and the same operations, and of the most approved construction.
They are very extensively introduced into all the grain-growing sections of this country and the world. They are especially adapted to the force of the above Horse Powers and can be driven by Steam or Water power with equal advantage. They will be furnished on the most liberal terms and warranty.
Liberal discounts made to RAILROAD COMPANIES from the above prices, and agents solicited for the sale of their manufactures.
For further particulars see the new Illustrated and Price Catalogue of the ALBANY AGRICULTURAL WORKS, furnished gratis on application to the proprietors.

American Railroad Journal.

New York, Saturday, October 4, 1862.

The Pacific Railroad.

We have in various preceding numbers of this Journal advocated the Pacific Railroad as one of the greatest and most important projects of the age. We hazard nothing in saying that its construction is only a question of time, and even the day of its completion may be fixed as an event of 1872. The truth is, that at the meeting of the Corporators at Chicago where the subject was fully and ably discussed by an assemblage of gentlemen, from the loyal states, every way competent to its discussion, when the most valuable and precise information was given by those who were familiar with every mile of the distance, when such men as Genl. Curtis, Gov. Evans, Dr. Monell, Governor Dennison, of Ohio, and others equally distinguished, gave their testimony as to the facilities of construction, the fertility of the numerous great valleys it was to open, and the rich and inexhaustible ores its deep cuttings in the mountains were to disinter, the Convention came quite unanimously to the conclusion, that the road was practicable and indispensable, would be remunerative, and should be made.

Nor was this determination changed when it was ascertained that the late General Lander had said, he would undertake to build an ordinary railway over hundreds of miles of the Eastern section for six thousand dollars per mile, nor when a member of the Convention openly asserted there were contractors, ready to build the whole line for the sum for which the Government had given its credit and was to issue bonds. After such demonstrations as these, there could be but one opinion among the Corporators as to the immediate feasibility of construction. Those who at first had talked despondingly of the financial wants of the Country and proposed to appeal to Congress for further aid, abandoned all such ideas, and came to very different conclusions before they adjourned.

An interesting development was made in relation to the Governmental surveys while Jefferson Davis was Secretary of War. It appears that under his positive instructions the routes to be explored were designedly such as to discourage if possible the idea of their practicability, and that those which would have been found practicable were purposely avoided. A shorter line it is believed, approaching somewhat to an air line, may yet be traced which will only require a short tunnel to overcome the most difficult grades in the mountains, not so difficult as that now being made at Mount Cenis in the Alps. Instead of a road eighteen hundred miles long, we may very probably have one not more than thirteen or fourteen hundred, and this is therefore a work which several of the States could build with their own resources. We are not all of us aware what California now is and what she is destined to be. We find in the elaborate speech of Mr. DeWitt Bloodgood, delivered before the Corporators, this interesting statement, which actually falls short of the truth.

"Sprung originally, like another Minerva, from the brain of the American Jove, California could, after a few years, build this road alone. According to the government survey she possesses four hundred thousand square miles of territory, which would give eight States as large as New York, fifty as large as New Jersey, and fifty seven as large as Massachusetts. With a population equal per square mile to that of New Jersey, California would support eighteen millions of inhabitants; if equal to New York, twenty millions; and if equal to Massachusetts, forty millions."

Perhaps the greatest apprehension is to arise from the method in which the final organization is to be effected. As the matter now stands, it seems quite evident, that the Government credit being large, but little outside subscription will be necessary. By the act of Congress, when two millions are subscribed and ten per cent. is paid in, the work may proceed, and when the first forty miles are finished, sixteen thousand dollars per mile will be advanced by the Government to the Company in its bonds. If, as is now supposed by many competent judges, the road can be made with these government advances, no more than the ten per cent will be called in, at least not for the present. Those parties then who advance this $200,000 will have the control, the manipulation of these bonds, the management of many millions, an enormous patronage, extensive contracts and the sale of the ceded lands. Thus an immense power will be in the hands of the representatives of a very small capital, and as our Wall street operators have a keen relish for such transactions, we should not be surprised, if a combination was made for the purpose of just such a speculation. It is to be hoped that the subscription will be so large as to render the attempt impossible.

The financial condition of the Country at this moment is favorable rather than otherwise to the construction of this road. One or two millions of dollars are expended every day by the Government; it is in the hands of the people, and largely accumulating there. It will find its way into innumerable forms of investment. Thousands will be willing to place some money in the stock of the Company, from patriotic and other motives, indifferent as to the immediate personal results. They know it will vastly benefit the trade and commerce of the Country, populate the fertile valleys of the Platte and other great rivers, that it will add to our agricultural products, give rise to new towns, cities and states, that it will change the route of traffic with the East, deprive Europe of its advantage of position in that intercourse, make New York the clearing house of the world, and bring forth the treasures of the Sierras in inexhaustible quantities. Convictions like these in the minds of the industrious and enterprising people of the North must lead them to give the project a great and united support. We therefore see nothing which can prevent the construction of the road. It is feasible, it will be remunerative,

it is National, it connects two great Oceans, it will change the face of human affairs. All the labor will be at hand, when our gallant soldiers return from their camps and field works, to plunge their spades into peaceful trenches, and pile up embankments, behind which they will only meet friends. In short the whole affair wears the most favorable aspect, and the energy shown in its preliminary organization amid the trials and struggles of civil war, are a proof of the indomitable and sublime spirit which inspires the American heart. We hope that our calumniators abroad will mark this trait in our characters, if they falsify all our other good ones.

Union Pacific Railroad Company.

The following is a correct list of the Corporators of the "*Union Pacific Railroad Company*," with their residences:

MAINE.

James Dunning,	Bangor.
John M. Wood,	Portland.
Edwin Noyes,	Waterville.
Joseph Eaton,	Winslow.

NEW HAMPSHIRE.

Joseph A. Gilmore,	Concord.
Chas. W. Woodman,	Dover.

VERMONT.

Henry H. Baxter,	Derby Line.
Geo. W. Collamer,	Montpelier.
Henry Keyes,	Newbury.
Thos. H. Canfield,	Burlington.

MASSACHUSETTS.

Wm. H. Swift,	Boston.
Samuel T. Dana,	Boston.
John Bertram,	Salem.
Franklin S. Stevens,	Boston.
Edward R. Tinker,	North Adams.

RHODE ISLAND.

Walter S. Burgess,	Providence.
William P. Blodget,	Providence.
Benj. H. Cheever,	Washington.
C. Fosdick Fletcher,	Washington.

CONNECTICUT.

Augustus Brewster,	Norwich.
Henry P. Haven,	New London.
Cornelius S. Bushnell,	New Haven.
Henry Hammond,	West Killingly.

NEW JERSEY.

Ephriam Marsh,	Jersey City.
Charles M. Harker,	Mount Holly.

MARYLAND.

Thos. Swan,	Baltimore.
Chauncey Brooks,	Baltimore.
Edward Wilkins,	Baltimore.

NEW YORK.

Isaac Sherman,	New York.
Dean Richmond,	Batavia.
Royal Phelps,	New York.
William H. Ferry,	Utica.
Henry A. Paddock,	
Lewis J. Stancliff,	Elmira.
Chas. A. Secor,	New York.
Samuel R. Campbell,	Castleton.
Alfred E. Tilton,	New York.
John Anderson,	New York.
Azariah Boody,	New York.
John S. Kennedy,	Chicago, Ill.
H. Carver,	New York and Washington.
Joseph Field,	Rochester.
Benj. F. Camp,	New York.
Orville W. Childs,	Syracuse.
Alexander J. Bergen,	Brooklyn.
Ben. Holliday,	New York.
D. N. Barney,	New York.
S. De Witt Bloodgood,	New York.
William H. Grant,	New York.
Thos. W. Olcott,	Albany.
Samuel B. Ruggles,	New York.
James B. Wilson,	New York.

PENNSYLVANIA.

Jno. Edgar Thomson,	Philadelphia.
Benj. Haywood,	Pottsville.
Joseph H. Scranton,	Scranton.
Joseph Harrison,	Philadelphia.
Geo. W. Cass,	Pittsburgh.
John H. Bryant,	Princeton, Ill.
Daniel J. Morell,	Johnstown.
Thomas M. Howe,	Pittsburgh.
William F. Johnson,	Pittsburgh.
Robert Finney,	Pittsburgh.
John A. Green,	Lewisburg.
E. R. Myre,	Philadelphia.
Charles F. Wells, Jr.,	Athens.

OHIO.

Noah L. Wilson,	Chillicothe.
Amasa Stone,	Cleveland.
William H. Clement,	Cincinnati.
S. S. L'Hommedieu,	Cincinnati.
John Brough,	Cleveland.
Wm. Dennison,	Columbus.
Jacob Blickinsderfer,	Trenton.

INDIANA.

Charles Paine,	Laporte.
Thomas A. Morris,	Indianapolis.
David C. Branham,	Madison.
Samuel Hanna,	Fort Wayne.
Jonas Votaw,	Jay Court House.
Jesse L. Williams,	Fort Wayne.
Isaac C. Elston,	Crawfordsville.

ILLINOIS.

Wm. B. Ogden,	Chicago.
Charles G. Hammond,	Chicago.
Henry Farnum,	Chicago.
Amos C. Babcock,	Chicago.
W. Selden Gale,	Canton.
Nehemiah Bushnell,	Galesburg.
Lorenzo Bull,	Quincy.

MICHIGAN.

John D. Campbell,	Adrian.
R. N. Rice,	Detroit.
Chas. A. Trowbridge,	Detroit.
Ransom Gardner,	Detroit.
Charles W. Penny,	Jackson.
Charles T. Gorham,	Marshall.
Willard M. McConnell,	Pontiac.

WISCONSIN.

William Bunn, Jr.,	Madison.
John Catlin,	Milwaukee.
Levi Sterling,	Mineral Point.
Geo. A. Thomson,	Racine.
Elihu L. Phillips,	Fond du Lac.
Walter D. McIndoe,	La Crosse.
T. B. Stoddard,	La Crosse.
E. H. Brodhead,	Milwaukee.
A. H. Virgin,	Plattville.

MINNESOTA.

Francis R. E. Cornell,	Minneopolis.
David Blakely,	Rochester.
A. D. Seward,	Mankeato.
Henry A. Swift,	St. Peter.
Dwight Woodbury,	Anoka.
John McKusick,	Stillwater.
John R. Jones,	Chatfield.

IOWA.

William F. Coolbaugh,	Chicago, Ill.
Lucius H. Langworthy,	Dubuque.
Hugh T. Reid,	Keokuk.
Hoyt Sherman,	Des Moines.
Lyman Cook,	Burlington.
Samuel R. Curtis,	Keokuk.
Lewis A. Thomas,	Dubuque.
Platt Smith,	Dubuque.

MISSOURI.

William M. McPherson.	St. Louis.
R. W. Wells,	Jefferson City.
Willard P. Hall,	St. Joseph.
Armstrong Beatty,	St. Joseph.
John Corby,	St. Joseph.

KENTUCKY.

Franklin Gorin,	Louisville.
Laban J. Bradford,	Augusta.
John T. Levis,	Covington.

KANSAS.

W. H. Grimes,	Atchison.
J. C. Stone,	Leavenworth.
Chester Thomas,	Topeka.
John Kerr,	Leavenworth.
Werter R. Davis,	Baldwin City.
Luther C. Challis,	Atchison.
Josiah Miller,	Corinth.

NEBRASKA.

Gilbert C. Monell,	Omaha.
Augustus Kountz,	Omaha.
T. M. Marquette,	Platsmouth.
Wm. H. Taylor,	Nebraska City.
Alvin Saunders,	Omaha.

COLORADO.

John Evans,	Denver.

NEVADA.

John Atchison,	Virginia City.
John D. Winters,	Virginia City.

CALIFORNIA.

S. J. Hensley,	San Francisco.
Peter Donahue,	San Francisco.
C. P. Huntington,	Sacramento.
T. D. Judah,	Sacramento.
James Bailey,	Sacramento.
James T. Ryan,	San Francisco.
Chas. Hosmer,	San Francisco.
Charles Marsh,	Nevada.
D. O. Mills,	Sacramento.
Samuel Bell,	Mariposa.
Louis McLane,	San Francisco and New York City.
George W. Mowe,	Sacramento.
Chas. McLaughlin,	San Francisco.
Timothy Dame,	Sacramento.
John R. Robinson,	San Francisco.

OREGON.

Wm. S. Ladd,	Portland.
A. M. Berry,	Jacksonville.
Benj. F. Harding,	Salem.

Appointed by the Secretary of the Interior.

Samuel J. Tilden, of New York,	New York.
H. V. Poor, of New York,	New York.
Wm. D. Griswold, of Indiana,	Terre Haute.
R. W. Latham, Dist. of Columbia,	Washington.
O. M. Wozencraff, of California,	San Francisco.

Pittsburg, Fort Wayne & Chicago Railway.

The earnings of this road for seven months ending July 31, 1862, were:

From freight	$1,309,581 33
" express	18,200 00
" passengers	495,269 29
" mail	54,775 00
" rent of railway	49,583 31
" miscellaneous	6,279 70
	$1,933,788 63

And the expenses were:

Conducting transp	$280,335 45	
Motive power	359,794 59	
Maintenance of way	299,593 08	
" cars	99,188 89	
General expenses	34,707 38	
		1,078,619 39
Net earnings for seven months		$860,169 24
Seven months int'r'st on funded debt		526,678 83
Net surplus		$333,490 41

The expenditures on account of construction and equipment for the seven months ending July 31, 1862, were: On the Eastern division, $309,773 40; and on the Western division, $443,391 31—total $743,964 79: an increase, as compared with the previous month's account, of $32,255 75.

The earnings by months have been as follow:

January	$293,420 30	May	$277,008 60
February	274,257 76	June	261,209 74
March	295,778 02	July	249,419 01
April	282,695 20		
Total for seven months	$1,933,788 63		

INCOME ACCOUNT, JULY 31, 1862.

Balance to credit January 1, 1862..		$239,919 17
Discount on $1,000 Bridge bonds of O. and P. R. R. Co., redeemed by trustees		1,200 00
Earnings for seven months		1,933,788 63
		$2,174,907 80
Two months' interest due January 1, 1862, on $100,000 Construction bonds given for depot property in Pittsburg		$1,166 66
Six months' interest due May 1, on Bridge bonds, O. and P. R. R. Co.		6,790 00
Six months' interest due May 1, on Chicago depot bonds		10,509 39
Six months' interest due July 1, on first Mortgage bonds, series A		30,625 00
Six months' interest due July 1, on $100,000 Construction bonds		3,500 00
Equalization of interest on the several classes of 1st and 2d Mortgage bonds		107,644 18
Expenses of trusteeship and re-organization		92,290 12
Balance of general interest account.		4,380 12
Discount on currency		519 43
Taxes of 1861, due this year and 1863		13,733 31
Overcharges on freight refunded		6,434 25
Expenditures on account of construction and equipment for 7 months.		743,964 79
Expenditures on account of operation and maintenance of the line for seven months		1,073,619 39
Balance to credit July 31, 1862		79,731 16
		$2,174,907 80

GENERAL STATEMENT.

Present cost of railway, equipment, structures, etc		$16,585,120 13
Cost of supplies for current operations		353,187 74
Due from other companies		63,282 75
Cash remitted by agents, and conductors, *in transitu*..	$39,426 81	
U. S. Post office	27,107 79	
Station agents, etc.	67,122 45	
U. S. War Department.	17,433 54	
J. F. D. Lanier, trustee.	157,359 90	
Wm. B. Ogden, rec'ver.	65,132 06	
Other assets	5,433 26	
		379,015 81
Cash in hands of treasurer		260,159 63
" " N. Y. Agency		149,123 77
" " paymaster		4,405,80
		$17,794,295 63
Capital stock		$4,487,495 87
Funded debt (See Bond List)		12,935,173 00
Due to other companies		63,007 97
Miscellaneous liabilities		15,663 61
Due for current expenditures in July and prior		213,264 02
Balance to credit of income account.		79,731 16
		$17,794,295 63

All the bonds bear interest at the rate of 7 per cent per annum, with the exception of Chicago Depot bonds, of which $39,410 are at 8, and the remainder at 6 per cent interest.

Champlain and St. Lawrence Railway.

At a meeting of the stock and bondholders of this company at Montreal, Canada, it was reported by a committee that they had obtained subscriptions to the preferred stock to the amount of £40,000 sterling, enabling the company to comply with the act passed by Parliament, and preventing a foreclosure by the bondholders. The new stock bears ten per cent. per annum, as dividend. Some expressions of dissent from the arrangement were made by persons present; but a resolution thanking the committee finally prevailed.

Commerce of Cincinnati.

The annual statement of the commerce of Cincinnati, for the year ending August 31st, has just been published. The introductory portion is devoted to a review of the political and financial events of the fiscal year. It is gratifying to find that, notwithstanding the many drawbacks and reverses experienced, the business done in breadstuffs, pork and cured meats has been larger than was ever before witnessed in the place, as have been the receipts and shipments of merchandize, including dry goods. The grocery business has been large, and on the whole profitable, in spite of the disappearance of Louisiana products from the market; but this has been accompanied by a decided reformation in the terms on which trade is now conducted. The system of giving long credits, with all its hazards and immoralities, has been broken up, and cash or short time is now the invariable rule.

In the manufactures of wood and iron a large falling off is reported. The exports of cabinet ware are now only a vestige of their former greatness. There is also a decline in the boot and shoe business, crockery, hardware, butter, molasses, castings, white lead, and a few other articles; on the other hand, domestic liquors, grains, beef, cattle, pork, flour, fish, hay, leather, &c., show large gains as compared with 1860–1. In spite of the vast transactions in breadstuffs, it is noticed that there was no speculative movement in them, the prices being steady or slowly advancing as the foreign demand improved. The total weight of the pork and lard exported during the year was equal to that of two millions of hogs. That there should arise such an immense demand for these abroad in such a commercial crisis is one of the many remarkable phenomena presented during the war.

Attention is directed to the tax imposed by Congress on whiskey, the effect of which was for a time to stimulate its production to an unusual extent. "All the distilleries were taxed to their utmost capacity and running all the time to meet the demand."

River navigation has been greatly favored during the year by the unusually high stage of water in the Ohio; but comparatively little business was done on the river, and rates of freight ruled low. As soon as the spring opened the railroads were crowded, and ever since they have been unable to accommodate the immense volume of freight offering. Consequently, the rates have been unusually high all summer. The number of steamboats running on the river from Cincinnati is 186, with a tonnage of 46,435 tons. Of barges there are 38 in all, with a capacity of 6,077 tons. During the year six new steamers, carrying 1,754 tons, were built at that place. These are independent of the steam gun boats constructed for the government, which were also six in number. It is worthy of notice that since 1855 there has been a regular decrease in the number of steamboats running between Cincinnati and other ports. In that year the aggregate was 365, last year it had gone down to 225. The number of steamboat arrivals was only 2,868, against 3,887, in 1853–4.

The annexed statement shows the value of the principal imports into Cincinnati during the years ending August 31, 1861 and 1862:

	1862.	1861.
Apples, green	$19,606	$152,576
Ale, Beer and Porter	21,444	22,207
Buffalo Robes	106,782	135,641
Beef	14,126	20,437
Bagging	19,455	2,924
Barley	178,136	300,317
Beans	78,520	25,304
Butter	233,569	538,475
Blooms	27,020	33,300
Boots and Shoes	1,048,649	1,453,005
Bran, Middlings, etc.	113,464	114,819
Crockery Ware, etc.	83,700	162,050
Candles	54,924	21,970
Corn	532,932	459,158
Cider	3,715	9,695
Cheese	250,666	431,003
Cotton	4,750,720	7,137,390
Coffee	3,744,904	3,373,343
Cooperage	142,762	121,169
Cattle	2,160,528	2,475,685
Cement and Plaster	26,100	30,800
Eggs	105,858	235,700
Flour	2,490,039	2,256,847
Feathers	194,880	167,220
Fish	163,535	289,547
Fruits, dried	159,605	114,605
Grease	246,312	121,712
Glass	78,932	93,866
Glassware	149,067	158,195
Hemp	550,600	148,900
Hides	640,900	763,135
Hardware	1,240,470	782,620
Hay	157,113	91,556
Hogs	3,643,212	6,396,672
Hops	77,740	70,680
Horses	5,174,520	1,234,700
Iron and Steel	815,492	937,706
Iron, Pig	663,656	590,800
Lead	234,156	297,229
Lard	1,976,028	1,169,189
Leather	472,396	296,820
Lemons	55,860	14,864
Lime	44,200	72,429
Liquors	148,010	221,400
Merchandise and Sundr's	37,415,000	34,230,000
Merchandise	6,555,880	3,174,400
Molasses	349,840	860,376
Malt	76,548	56,122
Nails	411,186	398,316
Oils	480,500	870,980
Oranges	53,948	51,636
Oakum	66,024	34,336
Oats	401,685	226,381
Onions	5,533	15,888
Pork and Bacon	2,453,740	2,616,783
Potatoes	137,187	127,292
Pimento Pepper, etc.	55,200	37,008
Rye	98,874	78,754
Raisins and Figs	35,137	67,607
Rope, Twine, etc.	76,968	79,056
Rice	408,870	148,995
Sugar	3,993,645	3,559,270
Seed	205,683	310,665
Salt	529,557	247,594
Shot	72,696	47,120
Starch	119,516	56,540
Sheep	54,906	49,592
Stearine	24,224	18,853
Tea	886,745	672,375
Tobacco	7,170,288	2,372,690
Tallow	175,230	145,640
Turpentine	51,090	89,320
Wines	247,350	204,562
Wheat	1,770,434	1,129,007
Wool	208,746	119,680
Whisky	3,437,088	2,233,313
Yarns, Cotton	8,040	13,546
Oil, Coal	127,812	.....
Do. Petroleum	39,463	.....
Lumber	687,500	800,000
Coal	480,000	882,000
Shingles	87,500	93,000
Coopers' Stuff, Wood and Stone estimated	521,000	525,000
Tar, Pitch and Rosin	17,707	32,279
Total	$108,292,823	$90,598,136

Below we give a statement of the value of exports from Cincinnati during the same periods:

	1862.	1861.
Apples, green	$52,245	$78,206
Alcohol	944,280	651,915
Ale, Beer, and Porter	79,480	80,640
Buffalo Robes	100,940	151,330
Beef	320,013	184,684
Bagging	2,605	2,540
Barley	31,539	41,255
Beans	76,776	28,377
Brooms	13,932	29,035
Butter	66,155	383.947

Coming down to the several items of the trade of Cincinnati, we find that the stoppage of all demand from the South, coupled with an unusually large "crop" of hogs last year prevented the making of any contracts with foreign buyers until after the beginning of November. Though the English and Irish buyers purchased freely, the price was the lowest average for twenty years. The packing season did not end till February, and in some places not until the first week in April. The total number of hogs packed in the city was 474,467, with an average weight of 224⅔ lbs., against 433,799 the year before, and weighing on the average, 221 lbs. each. The statistics published, cover a period of 31 years, and show a steady increase since 1833, when the aggregate reached 85,000 hogs. Had there been no war, it is considered probable the whole number packed would have approached three quarters of a million. The report adds:—

But the number of hogs packed here in any season represents but a portion of the pork business done in this city; for, not only is the product of the hogs slaughtered and cured here disposed of in this market, but likewise the product of those packed at numerous places in this State, Indiana and Kentucky, and also many places in southern Illinois. By examining our statistics of imports, it will be seen that during the past year there were received here in round numbers 29 million pounds of lard, and 51 million pounds of pork and bacon, making in all 80 million pounds, which, at 200 pounds per hog, is equal to 400,000 hogs, which, being added to the number packed here last winter, makes the whole number 875,000, equal to 175 million pounds, and is nearly one-third of the entire number packed in the western States, not including those shipped to the Atlantic cities.

Cincinnati is becoming a place of some importance for her beef cattle. The greater portion of her supplies comes in by the railroads. The abundance of grass last year made prices rather low in spite of the Government demands. Compared with the average of the three previous years, the imports of beef cattle show a decrease, while the exports show an increase. The number of the former was 37,904, and of the latter 23,467. In the products of the dairy the imports and exports have been much smaller in amount and lower in price than in any year since 1855, owing to the absence of a Southern market. Of butter only 248 barrels and 9,262 kegs were exported, against 2,385 and 32,046, respectively, the year before. Cheese shows a smaller decrease, but one sufficiently large nevertheless.

For alcohol there has been an improved demand in Europe, with an increase in the manufacture. The quantity exported in 1861–2 was the largest sent off since it was produced in the city excepting 1858. We have already referred to the influences at work in stimulating the production of whiskey. From 13½ cents per gallon, in August, 1861, the price gradually rose to 28 cents in June last. The total receipts during the year are put at 492,000 barrels of 45 gallons each, and 25 per cent overproof. The exports were 238,000 barrels, averaging about 15 per cent overproof. The stock on hand is estimated at 138,533 barrels, less the city consumption. This may be increased at any time by larger stocks held in the vicinity of the city. The trade in barley and malt fell off largely; but inasmuch as the year's crop has been a short one, the market has closed quite buoyantly. Total imports for the year, 323,884 bushels; exports, 21,026 bags.

In the manufacture of articles of clothing numerous fluctuations are reported. That of boots and shoes fell off largely, but subsequently revived. The number of hands engaged in the trade has slightly increased. In clothing an immense business has been done, particularly for the United States army. In dry goods, notwithstanding the overthrow of the credit system, the trade has been found nearly up to any former year; in the exports it is greatly ahead. A larger district of country than usual became tributary to Cincinnati as a market, and this with the army demand fully made up for Southern losses.

The war has exercised a deleterious influence in the production of iron; still, the consumption of that material for cannon, shot, and shell has been considerable; and bar iron has been used quite largely in the manufacture of wagons. The trade has been reduced to a cash basis. With the high scale of duties now established, an excellent opportunity to carry on the iron business is afforded.

In sugar a better business has been done than was expected, with higher prices ruling as the year advanced. The same remark applies to coffee, the government being a large purchaser. In spite of the army consumption, however, the falling off in the consumption of both articles has been very great.

All the crops, oats and barley excepted, have been unusually abundant the present season, added to which was a large stock of old grain from 1861, giving a larger product for exportation than at any time previously, as well as supplying abundance of cheap food to our own population.

The Laws of Maryland as to the Killing of Cattle by Railroad Trains.

WHERE CATTLE ARE KILLED BY TRAINS, THE STATUTE LAW IMPUTES NEGLIGENCE TO THE COMPANY, AND THE ONUS IS UPON THEM TO DISPROVE IT. WHEREIN THE STATUTE HAS, AND HAS NOT CHANGED THE COMMON LAW.

This action was brought by one Keech, against the Baltimore and Washington R. R. Co., in the Circuit Court of Prince George's county in the State of Maryland, to recover the value of two horses and one mule killed on the Washington Branch of the Baltimore and Ohio Railroad.

At the trial of the cause, the plaintiff offered evidence showing that the defendants, as charged in the plaintiff's declaration, killed the mule and horses by collision of the cars on the defendant's track, and the value of the property, and also evidence tending to show that the horses and mule were upon the track without any fault on his part, but that they were killed through the negligence of the conductor and engineer having charge of the train which caused the loss. The defendants then offered evidence tending to show the use of the greatest care and diligence on the part of its agents.

Certain instructions were given by the court, to which both parties excepted. A verdict and a judgment were rendered in favor of the defendants, and the plaintiff then appealed to the Court of Appeals of Maryland. The Court held that by the common law in order to maintain an action against a railroad company for injury to stock, it was incumbent on the plaintiff to prove that the damage resulted from the fault or negligence of the defendant or its agents; this has been changed by the Acts of Assembly of the State of Maryland, which cast the *onus* of proof on the defendant. But the well settled principle of common law, that a plaintiff is not entitled to recover[illegible]

injuries to which his own fault or negligence has directly contributed, is not abrogated.

The following opinion was rendered at the decision of the case.

BARTOL J. In the case of the *Baltimore and Ohio R. R. Co., vs. Lamborn*, we adverted to the well settled principle of the common law, that a plaintiff is not entitled to recover for injuries to which his own fault or negligence has directly contributed, and we said that this rule applies as well to suits against railroad companies as private individuals, and is not abrogated by the acts of 1838, ch. 244, and 1846, ch. 346. To adopt the construction of these acts, contended for by the appellant, would entitle a party to recover damages for stock killed by a railroad train, although it should be shown that the accident resulted from the grossest carelessness on his part, or that he voluntarily turned them loose upon the railroad track when a train was passing. We cannot impute such intention to the Legislature, nor can it be found in any reasonable construction of the acts of Assembly. It is a cardinal rule of interpretation, that "Statutes are to be construed in reference to the principles of the common law, for it is not to be presumed that the Legislature intended to make any innovation upon the common law further than the case absolutely required. The law rather infers that the act did not intend to make any alteration, other than what is specified, and besides what has been plainly pronounced.

Guided by this rule of interpretation, we can give no other construction to these Acts of Assembly than that which we have heretofore declared. They leave the question of negligence, on the part of the plaintiff, where it was at the common law, and do not confer upon a party, who is himself a wrong doer, the right to obtain redress for the consequences of his own negligence or misconduct. By the common law in order to maintain an action like the present, it was incumbent on the plaintiff to prove that the damage complained of, resulted from the fault or negligence of the defendant or its agent. This has been changed by the Acts of Assembly. They cast the *onus* of proof on the defendant. When stock is killed by a railroad train, the law imputes negligence to the agents of the company, and in order to exempt itself from liability, it must be shown that the damage complained of was "the result of unavoidable accident." In construing these words of the act, we will remark, that we do not understand the Legislature as intending to interfere with the time-tables of the company, or to limit the rate of speed for the trains. While the act leaves to the company the full exercise of its rights in this respect, it imposes upon them the duty of exercising the highest decree of care and caution. These principles were announced in *Lamborn's case*, in which this court said, the question of the fault or negligence of the plaintiff, was a subject proper to be passed upon by the jury.

As some erroneous impressions appear to have grown out of the decision of that case, it may not be amiss to advert to some of its facts, which distinguish it from the case now under consideration. The record disclosed that Lamborn was the owner of land adjoining the railroad, that the horse was standing on the line of the road, near the track, and as the cars approached, he ran upon the track, and was overtaken and killed by the locomotive. No explanation was given of the circumstance, or any evidence to show that the horse was in charge of any one, or to relieve the plaintiff from the imputation of negligence, which might be presumed from the facts of the case. * * * *

Upon the evidence in this case (already stated,) we think the prayer asked by the plaintiff, correctly stated the law, and ought to have been granted; but the judgment would not be reversed on account of its rejection, because the same proposition was embraced in the fourth instruction given to the jury. We find no error in the first instruction given by the Circuit Court. These instructions (the 1st and 4th,) submitted to the jury the question of negligence on the part of the plaintiff, as well as on the part of the defendant, which was a proper subject for them to pass upon.

We think there was error in the second instruction, there being no evidence in the cause on which it was based. A similar prayer in Lamborn's case was ruled good, because there was evidence to support it.

The third instruction was also erroneous, because as interpreted by the appellant, it directed the jury that the defendant was not responsible, if the horses and mule were on the track of the railroad without any fault or negligence of the defendant or its agents; in the absence of fault or negligence on the part of the plaintiff, the exemption of the company depends upon its being proved that the collision took place without any fault or negligence on the part of its agents. This third instruction appears to have been copied from the fourth prayer in Lamborn's case. But when that case was under consideration, the 4th prayer did not receive either from the counsel who argued the case, or from the court, the construction which has been given to it by the appellant, in his argument here. It was construed as if the words "without the fault or negligence of the defendant," were meant to apply to the killing, and not to the horses being on the track; by transposing those words, or by a change in the punctuation, they might be so construed, and then the prayer would be free from objection.

It is plain, however, that the phraseology of the third instruction in the record before us, is susceptible of the interpretation put on it by the appellant, and calculated to mislead the jury. * * Judgment reversed and a new trial ordered.

Manufactures in the United States.

The annexed table, from the "Preliminary Report on the Eighth Census" gives the Statistics of Progress of Industry in the United State during the year ending June 1, 1860:

States and Territories	No. of Establishments.	Capital invested, in real and personal estate, in the business.	Raw Material used, including fuel. Value.	Average number of Hands employed. Males.	Females.	Annual Products. Value.
Maine	3,582	$22,000,000	$20,861,452	25,000	14,710	$36,076,000
